

MADHYASTH DARSHAN · CO-EXISTENTIALISM

The Ontology of Existence

*Existence understood as coexistence — nature saturated in
Omnipotence*

Based on §1 of *The Ontology of Coexistence* (AnalyticMadhyasthDarshan.org)

Primary texts of Shri A. Nagraj — MVD · KD · SB · JV (tr. Rakesh Gupta)

The Argument in Three Movements

- 1 What is real, and how it is ordered — coexistence is the bond of an all-pervasive ground and countable units; each unit has form, properties, essential nature, and dharma, and nature appears in four orders.
- 2 How two developmental lines proceed — compositional progression forms larger material and living configurations, while development in the atom can reach constitutional completeness as sentient jeevan. Every activity is effort–motion–result.
- 3 How sentient living becomes awakened conduct — the human joint form, jeevan's faculties and activities, the four harmonies, evaluation, realisation, and participation in humane order.

One claim — existence is coexistence — carried through three movements. The body's compositional line and jeevan's atomic line meet in animal and human living without becoming the same process.

FRAMING

The Questions Ontology Must Answer

What is Existence? — Is there one fundamental reality, or many — and how are they related?

What exists? — What are the basic constituents of reality, and what is each of them?

Does what exists begin? — Did reality originate at some time — or is origination only of configurations?

Does the self begin or end with the body? — Is the individual self (jeevan) produced by the body and destroyed with it?

Is the world finally real? — Is the plural world of units an appearance, or real in its own right?

How can what exists be known? — What must be understood — and at what scope — to know each aspect of reality?

Madhyasth Darshan answers each from a single starting point: existence is coexistence.

Madhyasth Darshan — architecture of coexistence

Two poles, one bond; four orders; two developments; sentient path happiness → bliss

OMNIPOTENCE · satta (pole 1)

formless · actionless · non-transforming · saturation soaks every unit

UNITS · ikai (pole 2)

formful, bounded, countable

form · properties · essential nature · dharma

Two developments (do not collapse)

A. compositions → bodies / environments (no awakening)

B. atom → T1 jeevan → T2 / T3 (sentient path only)

EXISTENTIAL PROGRESSION · order emergence on Earth (§1.5)

MATERIAL

existence

insentient

BIO / PRANIC

+ growth

insentient

ANIMAL

+ hope to live

jeevan + body

KNOWLEDGE

+ happiness

T2 / T3

happiness → bliss

T1 · sentience

COMPOSITIONAL SUPPORT

bodies / environments · no T2/T3

AWAKENING · T2 → T3 → realisation

knowledge-order face of the drive

composition ≠ awakening · hope ≠ bliss · design-span ≠ every unit's fate

Beginningless and conserved

Nothing arises from, or vanishes into, non-being.

Configurations begin and end; units persist.

"Brahma is truth, the world is perpetual."

Causation and time

Satta sustains; units do the work of change.

Time = duration of unit-activity (§1.6.4).

EMR owned in §1.2; completeness in §1.6.

Existence Is Coexistence

Omnipotence

Formless, all-pervasive, non-transforming, immeasurable — actionless energy. It performs no actions, yet every unit is energised, regulated, and conserved in it. It has no absent place.

Units of nature

Formful, active, countable entities — each bounded from six directions, and each soaked, submerged, and surrounded in Omnipotence, with form, properties, essential nature, and dharma. At the smallest scale, every unit is built from the same basic building block: an atom — a core with parts orbiting it.

Never two separate poles

Separation of a unit from the saturated whole “never happens.” The ground is state-complete — without motion, wave, or pressure; nature saturated in it is state-dynamic — all change is unit-activity.

Saturation: The Ground–Unit Bond

Every formful unit is soaked, submerged, and surrounded in Omnipotence. Saturation names the ever-present ground–unit bond, not a later transfer or action by the ground. Recognition capability, activeness, and inherent regulation are evident on the unit side within coexistence.

Recognition capability

Complementarity is given in coexistence, not created. Bounded units standing together in the ground are able to recognise one another through capacity, ability, and receptivity.

Activeness

“Unit + Energy fullness = Activeness.”
Inherent energy and basic impulsion make the unit active, appearing as the inseparable triad of effort, motion, and result.

Inherent regulation

Inherent regulation appears as law and orderliness within the unit’s participation in coexistence — mediative and conserving, not an external statutory command.

§1.3

What Every Unit Is: Four Inseparable Aspects

Form

Shape, volume, and density — by which a bounded unit is individuated. Shared across all orders.

Properties

Effects units have on one another in mutuality — generative, degenerative, and mediative (assisting creation, dissolution, sustainment).

Essential nature

How the usefulness of a unit's properties participates in its order — its distinctive way of being (its “ness”).

Dharma

What a unit cannot be separated from — its innateness and fulfilment. Since existence is coexistence, indestructibility is the ultimate dharma.

Natural state → development (fulfilment aligned with innateness) **Excited state → decline** — each unit is a whole along with its environment; when all relationships are fulfilled, it is at ease.

Units in Relationships

“Nothing is isolated — that is the principle” (JV p. 43). Complementarity is actualised as value in mutuality; the unit’s main drive is to recognise and fulfil its relationships.

Relationship

Mutuality where expectations are predetermined in the sense of completeness — e.g. parent and child.

Association

Mutuality where expectations are voluntary — e.g. neighbours who share a wall.

Essentiality is value. Object values — utility and art — operate at every order; jeevan values, human values, relationship values, and expression values presuppose the knowledge order.

Below the knowledge order fulfilment is definite; at the human order it must be achieved through this chain.

§1.5

The Four Orders of Nature

Order	Essential nature	Dharma (cumulative)	Status
Material	integration–disintegration	existence	insentient
Bio (pranic)	vitalising–devitalising	+ growth	insentient
Animal	cruel–uncruel	+ hope to live	sentient — jeevan appears
Knowledge (human)	fortitude, courage, generosity, kindness, grace, compassion	+ happiness	sentient — awakening possible

The sentience boundary lies between the bio and animal orders. The body develops along the compositional line; jeevan arises through development in an atom. They meet as a joint form in animal and human living — not by the body becoming sentient through complexity.

§1.6 • TWO DEVELOPMENTS • ONE ACTIVITY STRUCTURE

Two Developments, One Activity Structure

Madhyasth Darshan distinguishes two developments. Compositional progression joins particles, atoms, molecules, cells, and bodies into larger configurations. Development in an atom can reach constitutional completeness as jeevan. These lines meet in living joint forms but remain distinct. Across both, activity is one inseparable triad: effort, motion, and result.

Effort
the internal side

*goal: restfulness of effort
effort comes to rest in realisation*

Motion
the external side

*goal: destination of motion
motion arrives at right conduct*

Result
the stable outcome

*goal: immortality of result
result becomes indestructible*

Two developmental lines

Compositional: larger configurations and bodies.

Atomic: some developing atoms reach T1; T2/T3 concern awakened jeevan.

§1.6

Three Completeness Transitions: T1, T2, T3

T1

Constitutional completeness — immortality of result; the atom becomes sentient jeevan

T2

Activity completeness — restfulness of effort; direct realisation and absolute resolution

T3

Conduct completeness — destination of motion; authentic conduct as living proof

T1 is constitutional completeness: a developing atom becomes sentient jeevan. T2 and T3 are not further material stages; they name completeness of activity and conduct in awakened jeevan.

§1.6.1

T1 — The Irreversible Sentience Threshold

Constitutional completeness at the atomic level, not neural complexity, molecular size, or elevation along the order chain. A developing ordinary atom takes in particles — hungry atoms and overfull atoms completing each other — within a suitable environment; once the required particles are in place, it closes.

Before T1 — evolving atom

- Still bound by molecular weight and structure
- Particle count still changing; development in progress
- Exhibits radiance and projection as an insentient unit

After T1 — the completed atom

- Released from molecular and weight bondage; carried by hope
- No increase or decrease in particles: qualitative change without quantitative change
- Sentient jeevan shows a finer mode of recognition

T1 is irreversible because the atom's constitution is complete and no longer decomposes. The completed constitution itself grounds jeevan's continuity beyond the body.

Body and Jeevan: One Joint Form

Animal and human living is a joint form. The body belongs to compositional progression; jeevan belongs to development in the atom. Their coordinated operation does not make the two processes identical, and bodily complexity alone does not produce sentience.

Body — the medium

- Pranic composition
- Sense organs, brain, and physical expression
- Species-conformant and decomposable

Jeevan — the knower

- Constitutionally complete sentient atom
- Hope, thought, desire, and resolve
- Continues when the joint form ends

The body supplies the instrument; jeevan is seer–doer–enjoyer through it. Their coordinated operation is the human joint form.

Jeevan: Five Faculties, Ten Activities

centre = core self (atma); the four rings around it are the other four faculties (MVD p. 78)

Faculty / strength	Projection (outward)	Reflection (inward)
Hope (mun)	selection	taste
Thought (vritti)	analysis	deliberation
Desire (chitta)	visualisation	contemplation
Resolve (buddhi)	resolve	enlightenment
Core self (atma)	authenticity	realisation

Jeevan is a constitutionally complete sentient atom. Its five faculties — mun, vritti, chitta, buddhi, and atma — carry ten activities through reflection (knowing) and projection (evidencing). Before awakening, four and a half activities are effective; awakening brings the faculties into accordance with atma and opens full activity.

The Structure of Karma

Every karma — every activity done with desire — carries five limbs: doer, cause, objective, result, and effect. Understanding alone changes nothing; it is the doing that yields the fruit. Desire, karma, and result must balance for the desire to be truly accomplished — book knowledge is only half the work.

*goal: something wished for
desire seeks fulfilment*

*goal: activity in the world
activity + aspiration = karma*

*goal: satisfaction of desire
balance of desire-karma-result*

Five limbs of karma

Doer — who acts

Cause — the need

Objective — the aim

Result — the fruit

Effect — its reach

§1.9 • FOUR HARMONIES WITHIN JEEVAN

Four Harmonies Within Jeevan

Happiness

harmony of mun–vritti

Peace

harmony of vritti–chitta

Contentment

harmony of chitta–buddhi

Bliss

harmony of buddhi–atma

Happiness, peace, contentment, and bliss name harmonies within jeevan, not passing moods and not a fourth sequence after T1–T3. Evidenced outwardly, they support resolution, prosperity, fearlessness, and coexistence in human living.

“Today we were evidenced in one issue, tomorrow in two, the day after in three.”

Reflection feeds projection, and projection feeds deeper reflection — this alone is what living means. — KD §3.12, p. 112–113

From Atoms to Societies

When complementary units fulfil their relationships, they compose into larger units. A natural inclination toward coexistence runs everywhere — each successful composition opens relationships at a higher tier.

Mixture

Components stay side by side and each maintains its own conduct — no new unit is formed.

Compound

Components combine in definite proportion and present a genuinely new unit, with its own form, properties, essential nature, and dharma.

Composition is not development. The developmental threshold is crossed only when an atom reaches constitutional completeness (T1); assemblies persist while relationships are fulfilled and decline when they are not.

Particles, atoms

Molecules

Cells & bodies

Human assemblies

Families and societies are not physicochemical compounds. Their humane order is achieved through relationship-fulfilment, evaluation, and mutual satisfaction — not through chemically definite proportion.

The Regulation Endowment

Orderliness is self-regulation, inherent in saturated units — not dispensed by a cosmic governor. **This mediative (madhyasth) regulation, which regulates and conserves every unit, gives the darshan its name.**

Order	Conformance mode	Definite or achieved
Material	result- / structural-conformance	definite
Bio (pranic)	seed-conformance	definite
Animal	species-conformance (inherited from gestation)	definite
Knowledge (human)	learned conformance (character, upbringing)	achieved: knowing → believing → recognising → fulfilling

The regulation endowment is each jeevan's own capacity to evaluate and fulfil relationships — not granted from outside. At family and society scale, this same regulation becomes visible as law. But statutory codification is not automatically justice: conduct can satisfy legality while still diverging from it.

§1.12 · EVALUATIVE PERSPECTIVES

Justice, Dharma, Satya

Evaluating an action rightly needs three widening perspectives. Justice asks whether one relationship is being fulfilled. Dharma asks whether the action fits the overall orderliness. Satya asks whether it holds up against the entire coexistence architecture.

Justice
the relationship

*goal: fulfil what's owed
recognise it, check what it requires*

Dharma
the orderliness

*goal: fit the wider pattern
discipline in thought, not just
conduct*

Satya
the architecture

*goal: align with the whole
grounded in realisation, not liking
or gain*

One graduated chain

*"Rule itself is justice, justice
itself is dharma, dharma itself
is truth, truth itself is
coexistence."*

— KD p. 13

Footnote: the same principle scales up — MVD names it justice within one order, dharma between nations, truth at cosmic scale (p. 161–162).

§1.12, §1.12.1 (justice, dharma, truth) · KD p. 10 (six perspectives), p. 13 (chain), p. 60, 86 (universal expectation of justice)

§§1.3–1.4, 1.7, 1.12–1.13 · WHAT KNOWING NEEDS — AND HOW IT HAPPENS

The Epistemic Ladder

What must be understood — scope

coexistence itself · the telos of knowing

relationships · shared expectations weighed by justice, dharma, and truth (§1.12)

dharma · needs the whole

essential nature · needs its order

properties · need mutuality

form · the unit alone

reflection (inward) · knowing deepens

each higher rung needs a wider context to understand the aspect; the top rung is a different kind of knowing — coexistence realised, not just a wider unit-aspect

How knowing happens — within jeevan

Core self (atma) realisation — only through truth · authenticity

acted in alignment → bliss

Resolve (buddhi) enlightenment of existence, jeevan, conduct · resolve

acted in alignment → contentment

Desire (chitta) contemplation & visualisation · direct recognition

acted in alignment → peace

Thought (vritti) deliberation in refuge of justice–dharma–truth · analysis

acted in alignment → happiness

Hope (mun) taste & selection — first acceptance of the proposal

projection (outward) · evidenced in conduct

The ladders meet at the top: coexistence itself, known and acted on in the core self, is felt as bliss — each lower pair, likewise, only when acted on, not merely known (§1.8, §1.13). MVD p. 11 · JV pp. 61, 120, 138 · MVD pp. 78, 101, 137

§§1.7–1.8, 1.10, 1.12, 1.15 · WHERE THE LADDER COMPLETES — OR STALLS

The Fork: What Makes Me Happy?

Every jeevan, knowingly or not, is asking one question: what makes me happy? Its faculties — resolve, desire, thought, and hope — answer that question by pointing either toward the body or toward coexistence.

Delusion

jeevan identifies as the body — resolve, desire, thought, and hope pull toward the body — accumulation, comfort, and safety

Awakening

jeevan knows its true nature and coexistence — resolve, desire, thought, and hope align around the core self — undivided society, universal orderliness

Same faculties, opposite direction. The drive that builds the epistemic ladder (§1.7) runs toward the body in delusion and toward coexistence in awakening — the same faculties, run two ways.

Resolution

Prosperity

Fearlessness

Coexistence

The same fork resolved in the individual is evidenced across a human tradition — resolution, prosperity, fearlessness, and coexistence, sustained as tradition (§1.15).

JV p. 93 (root of delusion: body mistaken for jeevan) · MVD Ch. 17 (ego → stubbornness → delusion) · JV p. 61; MVD p. 13 (§1.15)

Realisation in Coexistence

The drive comes to rest when relationships across nature are fulfilled and made evident in coexistence — not because Omnipotence becomes a knower, but because awakened jeevan realises and evidences the coexistence in which it has always existed. Recognising and fulfilling become its living proof.

Realisation is bliss

“Truth itself is abundance (coexistence), realisation of abundance itself is bliss, bliss itself is jeevan.” And it is knowledge itself: what is realised is the ground the unit was always soaked in.

Knowledge — in projection

Realisation projected outward is authenticity — knowledge, wisdom, and science unfolding into conduct.

Knower — in reflection

The knower is jeevan filled with realisation. When resolve turns inward to the core self, self-realisation and realisation in coexistence arrive together.

Knowable — and no merger

What is known is existence itself — nature saturated in Omnipotence. Knowledge, knower, and known become uniform as roles in one bond — not a merger: the knower remains a distinct jeevan.

THE CULMINATION · BUILT INTO THE DESIGN

An Awakened Human Tradition

The drive toward completeness comes to rest in awakened human beings — effort settled, understanding proven in daily conduct.

Resolution

in every person

Prosperity

in every family

Fearlessness

trust in society

Coexistence

with all of nature

A humane tradition: each generation raised into the same understanding — universal orderliness sustained across education, justice, health, production, and exchange.

The Questions, Answered

Question	Madhyasth Darshan answer
What is existence?	Eternal coexistence: countless units saturated in all-pervasive Omnipotence.
What exists?	Formless Omnipotence and countless formful units, irreducibly together.
Does existence begin or end?	No. Existence is perpetual; configurations form, transform, and decompose.
What is the self?	Jeevan: a constitutionally complete sentient atom working through the body.
Is the world real?	Yes. Units and their relationships are real within perpetual coexistence.
How is it known?	Through study, self-examination, practice, realisation, and evidence in conduct.
