

Madhyasth Darshan Ontology: A Core Conceptual Map and Primary-Text Guide

This study aid presents the core ontological architecture of Madhyasth Darshan as a single map. It is intended for repeated study: first follow the large structure in the figure, then use the numbered reading guide to locate each concept in the primary texts. The figure follows the shortest path from coexistence to humane fulfilment; a final classification key explicitly maps the value families, karma, progressions, planes, human types, evaluative perspectives, social dimensions, and evidence standards that would overload one diagram.

The map distinguishes two lines that are easily conflated. **Compositional progression** produces molecules, cells, bodies, and environments. **Development in the atom** reaches constitutional completeness as *jeevan* and continues, in the human joint form, toward activity completeness and conduct completeness. A body does not become *jeevan* merely by becoming biologically complex.

Section numbers printed in the figure point to the corresponding sections of [The Ontology of Coexistence](#).

How to read the map

Read the figure from its ontological ground toward its lived evidence:

1. **Existence is coexistence.** Formless Omnipresence (*satta*) and countless formful units (*ikai*) are eternally and inseparably present.
2. **Saturation is the bond.** Units do not first exist independently and later enter Omnipresence; every unit is submerged, soaked, and surrounded in it.
3. **Activity belongs to units in mutuality.** Omnipresence is actionless and non-transforming. Saturation ontologically entails energy-fullness, forcefulness, recognition, regulation, and activity as effort–motion–result; the texts do not supply a separate physical mechanism for this entailment. This is *kriyā*, or activity, throughout nature — not *karma*, or human action. Units are definite bearers, while form is reflected, relative properties become effective, essential nature is recognised as usefulness, and *dharma* is evidenced through order-specific participation.
4. **Nature has four orders.** Material and pranic orders are insentient. Animal and knowledge orders are joint expressions of an insentient body and sentient *jeevan*.
5. **Development has two lines.** Compositional progression supplies bodies and environments but does not produce T1, T2, or T3. Development in a constitution-oriented atom supplies constitutionally complete *jeevan* at T1; awakening within the human joint form proceeds through T2 and T3.
6. **The first completeness is constitutional.** At *gathanpurnata* (T1), the atom's particle constitution closes and it becomes the sentient unit called *jeevan*.
7. **The next two completions concern awakening.** Activity completeness (T2) is realisation and resolution; conduct completeness (T3) is their continuity as authentic conduct and living proof.
8. **Ontology culminates in participation.** Understanding is evidenced through resolution, prosperity, fearlessness, coexistence, undivided society, and universal orderliness.

Primary-text guide to the concepts

Page numbers below refer to the printed page numbers represented in the local Markdown transcriptions and corresponding PDFs. KD is a working English rendering; its Part 3 subsection and printed-page range are supplied together.

1. Existence as coexistence

Concept. Existence is the eternal coexistence of Omnipresence and nature. Insentient and sentient units are inseparably present in the pervasive ground; neither pole is produced from the other.

Primary pointers. SB, pp. 48–49; MVD, pp. 11, 32–34; JV, p. 18.

Read for. The two-pole ontology, the claim that existence is eternally manifest as coexistence, and the inseparability of consciousness/matter terminology in the English translation without treating Omnipresence as a personal mind.

2. Omnipresence (*satta / vyapak*)

Concept. Omnipresence is formless, all-pervasive, non-transforming, immeasurable, and actionless. The translations also call it Omnipotence, Uniform Energy, Space, Knowledge, Consciousness, Eternity, God, and Absolute Energy. Knowing as an activity belongs to *jeevan*, not to Omnipresence as a universal cognising subject.

Primary pointers. SB, pp. 48–50, 57, 68–70; MVD, pp. 26, 32–34, 40.

Read for. State-completeness, actionlessness, permeation, the absence of an external ruler, and Omnipresence as sustaining condition rather than an efficient agent performing transformations.

3. Units (*ikai*) and their four aspects in mutuality

Concept. Units are bounded, countable, formful realities. Every unit has form (*roop*), properties (*guna*), essential nature (*svabhav*), and *dharma*, but these do not form a static inventory of observable values. Form is the unit's real boundary and configuration and is reflected in mutual facing. *Guna* is relative power, effective when units come together. *Svabhav* is the essentiality or usefulness of that effect in an order and context. *Dharma* is the unit's inseparable innateness and fulfilment. Each unit remains an identifiable bearer and a whole with its environment while participating in overall orderliness. The peepal-tree example in the main study follows all four aspects through one pranic composition and distinguishes growth as *dharma* from seed-conformance as its mode of conduct.

Primary pointers. SB, pp. 13–15, 48, 50–54, 248–252; MVD, pp. 11, 47, 50–51, 112; KD §3.1 and §§3.9–3.10, printed pp. 54–102.

Read for. Boundary and unitness; bearer and inseparable capacity; reflection and relative effect in definite mutuality; usefulness and value; natural and excited states; and the atom as the root quantity of physical, chemical, and *jeevan* activity.

4. Saturation (*sampriktata*)

Concept. Saturation names the inseparable presence of every unit in Omnipresence: submerged, soaked, and surrounded. It is not a temporal event, a transfer of substance, or an intervention performed by Omnipresence. Madhyasth Darshan treats energy-fullness, forcefulness, recognition, and regulation as ontological entailments of saturated unithood; the primary texts do not supply a separate physical mechanism for that entailment.

Primary pointers. SB, pp. 48–50, 57, 61–62, 69; MVD, pp. 32–33, 40; JV, p. 18.

Read for. Energy-fullness and forcefulness in units; recognition and complementarity; the mutual manifestation of energy and basic impulsion; and coexistence itself as the complete content of knowledge.

5. Recognition, fulfilment, and complementarity

Concept. Units recognise and fulfil according to their constitution and order. In insentient nature, reflection, effect, recognition, and fulfilment are definite according to the participating units and conditions. Animal *jeevan* expresses hope-bound selection through a species-conformant bodily medium.

Human evaluation can become mistaken only when deluded *jeevan* identifies itself with the body; the underlying mutuality does not thereby become indefinite. Complementarity becomes value in relationship.

Primary pointers. SB, pp. 49–54, 57, 59, 61–62, 80–81, 123; MVD, pp. 61–62; JV, pp. 43, 67, 69.

Read for. Definite recognition among particles and atoms, seed- and species-conformant fulfilment, capacity–ability–receptivity, relationship versus contact, and the statement that nothing exists in isolation.

6. Effort–motion–result (*shram–gati–parinam*)

Concept. Every activity bears effort, motion, and result inseparably. These are joint aspects of one activity, not three independent events. Force is recognised in state and power in motion.

Primary pointers. SB, pp. 53, 58, 62, 69, 71; MVD, pp. 40, 104; KD §§3.11–3.12, printed pp. 102–118.

Read for. The universal structure of activity, force–power as state–motion, projection–reflection in sentient activity, and the mapping of result, effort, and motion to the three completeness goals.

7. The four orders of nature

Concept. Nature is organised as material, pranic or bio, animal, and knowledge or human orders. Their dharmas are cumulatively stated as existence, growth, hope to live, and happiness. Their essential natures name order-definite relational expressions, not context-free scalar properties.

Primary pointers. SB, p. 179; MVD, p. 115; JV, p. 44.

Order	Principal manifestation	Order-specific expression of essential nature	Cumulative dharma
Material	Atoms, molecules, physical and chemical compositions	integration–disintegration	existence
Pranic / bio	Cells, vegetation, bodily compositions	vitalising–devitalising	existence and growth
Animal	Body– <i>jeevan</i> joint form under species-conformance	cruel–uncruel	existence, growth, and hope to live
Knowledge / human	Human body– <i>jeevan</i> joint form with knowing and believing	fortitude, courage, generosity, kindness, grace, compassion	existence, growth, hope to live, and happiness

Integration–disintegration occurs among material constituents; vitalising–devitalising is recognised relative to bodily nourishment and protection; cruelty means suffering caused to another; humane essential nature is evidenced through relationship and conduct. The relational context makes each expression definite rather than subjective.

8. Compositional progression

Concept. Atoms combine into molecules and larger physicochemical compositions. Chemical grandeur makes biological cells and bodies possible. This line supplies bodies and environments but does not itself produce *jeevan* or awakening.

Primary pointers. KD §§3.1–3.2, printed pp. 54–60; MVD, pp. 8, 42, 92–93; SB, pp. 76–78; JV, pp. 48, 67, 82.

Read for. Atomic and molecular composition, mixtures and compounds, biological composition, transmission of composition method through seed and lineage, and the return of decomposed biological forms to material constituents.

9. Development in the atom

Concept. Constitution-oriented atoms are described as hungry, undigested or overfull, and satisfied. Absorption and displacement continue until a developing atomic constitution reaches completeness. This is distinct from the growth of a molecule, organism, or brain.

Primary pointers. KD §§3.2–3.3, printed pp. 58–68; MVD, pp. 8, 91; SB, pp. 55, 58–60, 71, 114.

Read for. The distinction between compositional development and development in the atom, hungry–undigested complementarity, particle closure, and the transition to constitutional completeness.

10. Constitutional completeness (T1)

Concept. At *gathanpurnata*, the atom's particle constitution closes. It is freed from molecular- and weight-bondage and becomes hope-bound sentient *jeevan*. Particle increase and decrease cease, while qualitative activity continues.

Primary pointers. MVD, p. 91; SB, pp. 52, 55, 59, 80–81, 92, 114; KD §3.3, printed pp. 60–68.

Read for. The MD criterion for the sentient threshold, the immortality of result, hope-power and taste-recognition, and why *jeevan* is not identified with biological composition.

11. Jeevan and the body–jeevan joint form

Concept. *Jeevan* is the constitutionally complete sentient atom and the knower. The body is a pranic composition and the medium through which *jeevan* is expressed in animal and human orders. Animal bodies constrain expression to hope-bound species-conformance. The fully enriched human nervous system provides for complete understanding, but does not guarantee it; human delusion begins when *jeevan* identifies itself with the body.

Primary pointers. MVD, pp. 13, 78, 115; JV, pp. 54, 59, 79, 92–93; KD §3.16, printed pp. 136–145.

Read for. The distinction between body and *jeevan*, the human as their combined form, the body's sensory and neural provision, freedom of action and imagination, and the error of taking the body to be the self.

12. The five faculties and ten activities of *jeevan*

Concept. Atma is the nucleus; buddhi, chitta, vritti, and mun are associated with successive orbits. Each faculty has an outward projection and an inward reflection activity. All ten activities belong to and continuously operate in *jeevan*; “four and a half” names their restricted effective organisation and bodily evidence in deluded human living, not absent faculties.

Primary pointers. MVD, pp. 13, 77–78, 99–101, 126, 277–279, 328–348; JV, pp. 73–74, 92, 138; AVD, pp. 91–94; KD §§3.6, 3.11–3.12, printed pp. 70–118.

Faculty	Projection	Reflection
Mun / hope	selection	taste-recognition
Vritti / thought	analysis	deliberation
Chitta / desire	visualisation	contemplation
Buddhi	resolve	enlightenment
Atma	authenticity	realisation

The ten are enumerated in finer grain as named positions at each faculty, whose two members are again what the faculty bears in state and what carries it outward. The named values of the concept-19 families belong to that enumeration rather than standing beside it.

Read for. The orbital account, force and power, projection and reflection, the distinction between inherent activity and effective bodily evidence, four-and-a-half activities in deluded human living, the finer-grained positions at which named values are borne, and the regulation of the faculties from atma in awakening.

13. Activity completeness (T2)

Concept. Activity completeness is restfulness of effort. Restfulness means freedom from delusion, not cessation of activity. *Jeevan* realises coexistence and becomes established as seer while remaining doer and enjoyer.

Primary pointers. SB, pp. 51, 58, 71, 81; MVD, pp. 77, 88, 101; KD §§3.6, 3.12, and 3.18, printed pp. 70–88, 110–118, and 151–153.

Read for. Absence of delusion, realisation and resolution, the study–reflection circuit, seer–doer–enjoyer, and the internal settlement of the search for happiness.

14. Conduct completeness (T3)

Concept. Conduct completeness is the destination of motion. Realisation becomes continuous as humane work, behaviour, relationship-fulfilment, justice, participation in orderliness, and living proof in tradition.

Primary pointers. MVD, pp. 80, 160–163; SB, pp. 137–138, 159; KD §§3.12 and 3.18, printed pp. 110–118 and 151–153.

Read for. Projection as evidence, authenticity, mutual satisfaction, conduct as proof of understanding, and continuity through an awakened human tradition.

15. Orders and developmental planes

Concept. An order identifies what kind of manifestation a unit participates in; a plane identifies the developmental standing reached. The four planes are physicochemical, delusional, deific, and divine or complete.

Primary pointers. SB, p. 52; MVD, pp. 49–50, 160.

Read for. Why the knowledge order spans more than one plane; why animal bodily limitation and human body-identification must not be treated as the same mechanism even where both stand before awakening; and how activity and conduct completeness define the deific and divine planes.

16. Regulation, law, justice, and orderliness

Concept. Omnipresence does not command. Regulation is evident in saturated units through mediative organisation and order-specific conformance. Law is universal definite regulation; justice is the human completion of relationship through recognition, value-fulfilment, evaluation, and mutual satisfaction.

Primary pointers. MVD, pp. 15, 26–27, 67, 137, 161–162, 311; SB, pp. 57, 62–63, 69.

Read for. The mediative nucleus, result-, seed-, species-, and sanskar-conformance, the six human evaluative perspectives, the distinction between law and statutory command, and the law–justice–dharma–truth chain.

17. Knowledge, knower, known, and realisation

Concept. *Jeevan* is the knower and seer. Existence as coexistence is the known and seen. Knowledge comprises the holistic view of coexistence, knowledge of *jeevan*, and knowledge of humane conduct. Their coherence in awakening does not erase these distinct roles.

Primary pointers. SB, p. 81; MVD, pp. 14–15, 115, 126, 286–287; KD §§3.17–3.18, printed pp. 145–153.

Read for. The distinction of knowledge, knower, and known; seer, seen, and seeing; realisation in coexistence; authenticity; and knowledge made meaningful through participation.

18. Perpetual world and persistence of *jeevan*

Concept. Omnipresence and units do not arise from non-being or pass into non-being. Configurations change while existence remains. *Jeevan*'s individual persistence is additionally grounded in constitutional completeness, not merely in generic quantity conservation.

Primary pointers. MVD, pp. 13, 91; JV, pp. 20, 54; SB, pp. 55, 57, 59, 114.

Read for. “Brahma is truth, the world is perpetual,” non-annihilation, particle closure, freedom from molecular and weight bondage, continuation after bodily death, and reassociation with another body.

19. Happiness, bliss, and human fulfilment

Concept. Happiness, peace, contentment, and bliss name harmony among the faculties of *jeevan*, each borne as a named activity by the outer faculty of its pair — happiness at *mun*, peace at *vritti*, contentment at *chitta*, bliss at *buddhi*. In living, they correspond to resolution, prosperity, fearlessness, and coexistence.

Primary pointers. MVD, pp. 77, 100–101, 160–163, 328–346; JV, pp. 61, 138.

Read for. Mun–vritti, vritti–chitta, chitta–buddhi, and buddhi–atma harmony; the four stages of happiness; and their public evidence in person, family, society, and universal orderliness.

Classification key for the full ontology

The figure and numbered guide show the core dependency structure. The following compact keys make the remaining classifications explicit without forcing them into the central diagram.

Units, relations, composition, and activity

Distinction	Meaning	Main-study location
Levels of unithood	The atom is the root unit; a molecule, cell, body, or planet is a composite unit while its organisation persists; a body– <i>jeevan</i> joint form coordinates two distinct units; a human assembly is a relationally achieved whole	§§1.1, 1.10, 1.14
Natural and excited states	The natural state accords with definite conduct; the excited state is activity displaced from that accord by pressure and therefore liable to decline	§1.3
Relationship and contact	A relationship carries expectations inherent in fulfilment; a contact carries voluntarily adopted expectations	§1.4
Mixture, compound, biological composition, and assembly	A mixture retains component conducts; a compound establishes a new bounded composition; a biological composition transmits its method through seed and lineage; a humane assembly is sustained through recognised relationships and values	§1.10
Time and causation	Time is the duration of unit-activity. <i>Satta</i> sustains coexistence but does not perform transformations; composition, decomposition, and development occur through unit-activity in mutuality	§1.6.4

Distinction	Meaning	Main-study location
Karma	Human activity joined to aspiration is karma. Its five limbs are doer, cause, objective, result, and wider effect. Karma is not attributed to insentient units. Freedom in action does not cancel causal consequences; awakening removes unresolved dependence while undergoing them	§1.7.1

When a composite form disintegrates, that organisation ends while its constituent realities persist in other relations. This is why conservation must not be expressed as the permanence of every composite unit.

Five value families and six individual value types

MVD presents five value families. Its object-value family contains two distinguishable values—utility and art—so separating them yields six individual value types.

Value family	Content
Object values	Utility: definite usefulness of an object; art: meaningful aesthetic enhancement of usefulness
<i>Jeevan</i> values	Happiness, peace, contentment, and bliss—the four harmonies among the faculties of <i>jeevan</i> , each borne as a named activity by the outer faculty of its pair
Human values	The value-domain through which humaneness becomes evident; closely related humane and higher-humane essential natures include fortitude, courage, generosity, kindness, grace, and compassion
Established values	The nine relationship values—trust, respect, affection, care, guidance, reverence, gratitude, glory, and love—borne at <i>chitta</i> , <i>vritti</i> , and <i>mun</i> , each paired with the civic value expressing it
Civic values (<i>shishta-mulya</i>)	Right-use and purposeful-use of body, mind, and wealth in social participation; “expression values” is an explanatory alternative, not another family

Object value is spread in units. The named values of the other four families are activities borne by *jeevan*’s faculties, defined in the same appendix of the primary texts that defines its activities (MVD, pp. 328–348; AVD, pp. 91–94; §§1.4, 1.7). Relationship supplies the recognised mutuality, value identifies what fulfils it, evaluation checks the fulfilment, and mutual satisfaction completes justice (§§1.4, 1.12).

Four progressions, four planes, and five human types

These classifications answer different questions and must not be collapsed into one ladder.

Progression	What it tracks
Existential progression (<i>niyati-kram</i>)	Definite manifestation of the four orders under conducive conditions; not a deterministic historical timetable
Way of existence (<i>niyati-vidhi</i>)	Order-specific conformance: result-, seed-, species-, and sanskar-conformance
Development progression (<i>vikas-kram</i>)	Physicochemical and constitution-oriented atomic development up to T1
Awakening progression (<i>jagriti-kram</i>)	Qualitative development within constitutionally complete <i>jeevan</i> toward T2 and T3

Plane	Developmental standing
Physicochemical	Insentient constitution and composition before T1
Delusional	Constitutionally complete <i>jeevan</i> without realisation; in humans, the body is taken as self
Deific	T2 activity completeness: realisation and resolution
Divine or complete	T3 conduct completeness: authentic conduct and its continuity

The five human types classify consciousness and conduct, not biological species or permanent social classes:

Human type	Standing in the ontology
Animalistic-human	Delusional plane; T1 only; conduct organised around bodily sensitivity
Demonic-human	Delusional plane; T1 only; grouped with the animalistic type at this level because both remain body-identified
Humane or discerning human	Awakening progression is becoming established; knowing and believing increasingly guide conduct
Deific-human	T2; realisation and resolution
Divine-human	T3; authentic conduct and living proof in humane tradition

An animal's hope-bound species-conformant expression is a limitation of its bodily medium, not the specifically human error of body-identification (§1.9).

Six evaluative perspectives and the dual role of justice

Perspective	Principal domain
Pleasant–unpleasant	Sensation and instinct
Healthy–unhealthy	Bodily condition
Profit–loss	Material production and exchange
Justice–injustice	Human relationship and behaviour
Dharma–adharma	Thought and resolution
Truth–untruth	Existence as coexistence

The first three perspectives remain valid in their proper domains but cannot serve as the final stand-point for humane conduct. Justice is both the perspective that evaluates behaviour and the completed relational activity of recognition, value-fulfilment, evaluation, and mutual satisfaction. The law–justice–dharma–truth chain widens the field of evaluation rather than transforming one entity literally into another (§1.12).

Four human goals and five social dimensions

Human goal	Principal field of evidence
Resolution	Clarity and freedom from unresolved contradiction in the person
Prosperity	Assurance of producing more physical goods than assessed family needs and using them appropriately
Fearlessness	Trust in human mutuality and society
Coexistence	Complementary living among humans and with the rest of nature

Social dimension	Function
Education–sanskar	Transmits right understanding and the disposition to live by it
Justice–preservation	Fulfils relationships and protects humaneness
Health–restraint	Maintains the bodily condition and discipline needed to evidence awakening
Production–work	Produces more than assessed physical needs through labour and skill
Exchange–storage	Organises exchange through labour value and maintains reserves for continuity

The four goals describe widening evidence in person, family, society, and coexistence. The five dimensions are the public structures that make this evidence continuous as humane tradition (§1.15).

Method and evidence

Mode	What it can establish within the account
Logical exposition	Coherence of definitions and relations
Study and self-examination	Intelligibility and first-person recognition of the proposed account
Experiment and practice	Whether understanding regulates work, behaviour, and relationship
Realisation	MD's claimed completion of knowing coexistence, <i>jeevan</i> , and humane conduct
Conduct-evidence	Intersubjectively visible resolution, values, mutual satisfaction, and participation
Instrument-based scientific inquiry	Publicly measurable confirmation or criticism of physical claims

The primary-text account does not provide an accepted measurement procedure for constitutional completeness, the *jeevan*–body interface, or post-death reassociation. Conduct-evidence therefore does not by itself convert every ontological claim into a contemporary scientific measurement (§1.16).

Suggested reading paths

For a first pass through the ontology, read concepts **1** → **4** → **7** → **8–10** → **11–14** → **17–19**. This gives the shortest route from coexistence to awakened conduct.

For the distinction between body and *jeevan*, read **7** → **8–12** → **18**.

For regulation, value, and social order, read **3–6** → **16–17** → **19**.

For a detailed critical and comparative treatment, see [The Ontology of Coexistence](#).
