

BOOK PLAN

The Human Possibility

Understanding, Coexistence, and the Fulfilment of Life

An Introduction to Madhyasth Darshan

A proposed accessible introduction to Madhyasth Darshan

For interested adults and older teenagers,
with no prior background in philosophy

Twenty short chapters | working length: 40,000-50,000 words

Plan revised: October 2, 2026, 12:47 PM IST

Book proposal

This primer is a book extension of the project, maintained in *Primer* / separately from the site's catalog studies. Its development is tracked as BOOK-01 in [PENDING.md](#).

This book introduces Madhyasth Darshan through the questions and responsibilities of ordinary human life. Its central question is: **What becomes possible in human living through understanding, and what does its fulfilment require?** The title, *The Human Possibility*, names the capacity to understand ourselves and existence, fulfil our relationships, and participate consciously in humane living. The book develops the philosophy's account of this possibility through inner life, relationships, work, society and the rest of nature. Babaji's literal endeavour that every human being live as *dev-manav* gives this inquiry its full direction; the opening wish introduces that purpose and Chapter 20 explains its meaning in the account of awakening.

Each chapter begins with something the reader can recognise, opens a question worth staying with, and develops the philosophy through an explanation that returns to living. A shared meal, dependable care, learning a skill or purposeful work can show a human aspiration already finding some fulfilment. Questions also emerge from misunderstanding and unmet need. Develop what understanding makes possible and the conditions of its fulfilment: competence, dependable conduct, actual material provision and shared arrangements. Familiar experience opens the inquiry; it does not settle every claim in advance.

The intended reader is an interested adult or older teenager with no background in philosophy. A working length of about 40,000 - 50,000 words allows twenty relatively short chapters, an opening portrait and wish, a brief preface, a small glossary, chapter source notes, and a closing Hindi song of gratitude to Babaji. The length is a planning estimate, not a reason to compress an explanation that needs space.

The book presents the philosophy affirmatively and persuasively. Its persuasion comes from connected reasoning, recognisable situations, and the possibility of examining the account in life. Philosophical comparisons, academic debates, formal models, and extensive terminology are outside this volume's purpose.

The six parts develop one inquiry: what human beings seek; the reality we belong to and our capacity to understand it; how understanding finds expression in values and relationships; the care, provision and skills through which we participate; arrangements that sustain humane life beyond familiar people; and the continuity and fulfilment of understanding. Each part widens the question while keeping earlier responsibilities in view. Material from the papers is redistributed according to this learning sequence. A chapter is a fresh explanation for the general reader, rather than an abridged paper.

Four connected aspirations give this movement a recurring thread: resolution within the person (*samadhan*), prosperity in the family (*samriddhi*), fearlessness and trust in society (*abhay*), and coexistence with nature (*sah-astitva*). Introduce them in Chapter 1 and return to them as the reader's understanding grows. The six parts give room to develop their connections: family life also needs resolution and trust, work connects provision with nature, and awakening is expressed across all these relationships. Coexistence receives its full account as the nature of existence in Chapter 4, alongside its expression in responsible human participation.

The method of inquiry begins with the opening chapters, before the fuller account of existence. Chapter 1 invites the reader to consider a proposal; Chapter 3 examines desires, assumptions, and the wish for harmony; Chapter 6 develops the relationship between study, understanding, and evidence in living. The distinction between the body's requirements and the conscious self's fulfilment also recurs through relationships, prosperity, education, and technology.

The account of development also becomes visible early. Chapter 5 distinguishes changing material composition, the constitutional completeness of *jeevan*, and the possibility of awakening. Chapters 6 and 19 deepen the questions of understanding and continuity; Chapter 20 brings conscious activity and conduct to their fulfilment. This is the philosophy's account of development, with its own definitions; the book does not present it as a scientific history of the universe or a guaranteed climb from one species or lifetime to another.

Dharma connects these stages without requiring a separate chapter. Chapter 1 raises the ordinary question of continuing happiness without adding the term. Chapter 5 first explains *dharma* as a unit's inseparable innateness across the four orders of nature. Chapter 7 returns to happiness as human *dharma* and asks how it becomes fulfilled; Chapter 10 introduces *dharma - adharma* as a perspective for evaluating thought and resolution alongside justice in behaviour and truth in understanding. Chapter 20 brings these senses back into the account of awakened living. The book must distinguish this use of *dharma* from a religious affiliation, a prescribed social role, or an external list of duties.

Opening-page design

Place one unnumbered page immediately before the preface, carrying a photograph of Shri A. Nagraj, the author's affectionate name **Babaji**, and his wish for humanity from *Jeevan Vidya: Ek Parichay*. The page copy appears below, immediately before the draft preface. Centre the portrait, name and wish with generous white space. Keep the Hindi original and its attributed English translation together, followed by a discreet source and photograph credit. In the finished book, omit running headers and a printed page number on this page. This portrait is front matter, separate from the four explanatory figures planned for the chapters.

Use the supplied [portrait asset](#), saved unchanged from the [official biography page](#). Its source is the [original image](#), 1084 by 730 pixels; retain its aspect ratio and use it at about 90 mm wide. Credit [madhyasth.org / Divya Path Sansthan](#); the site's [content terms](#) state CC BY-NC-ND 4.0. Carry that credit and licence into the book's acknowledgements or image credits.

The Hindi wish is verified in the [official online text](#), [opening address](#), p. 1. The English wording below is Rakesh Gupta's published translation, verified in *Jeevan Vidya: An Introduction*, translation dated 14 January 2023, printed p. 7 (PDF page 8). Preserve the source wording and identify the translator. Present the wish as Babaji's literal aim for humanity: that all human beings awaken and live as *dev-manav*. This aim animated his endeavour to make understanding and awakened living available to everyone. He explicitly connects the fulfilment of the wish with sharing his discovery in the Hindi text at p. 7 and p. 12, corresponding to English printed pp. 18 and 26 (PDF pp. 19 and 27). Read these alongside MVD pp. 85 - 89 and 321 for the account of dev-manav. The preface should explain this purpose briefly; Chapter 20 should return to the wish after developing dev-manav's understanding, beneficence and participation in the wider establishment of humane tradition. Keep the portrait page simple and personal, with source details in the notes.

Closing-page design

After all back matter, place the Hindi song supplied by the author as the book's final page, under the Hindi heading *Vandana*. It expresses gratitude to Babaji and, as the author notes, is generally sung in Madhyasth Darshan gatherings. The full page copy is the final section of this plan. Preserve the supplied wording, repetitions, punctuation and three-stanza structure; show the two standalone dots in the supplied text as blank space between stanzas. Keep all fourteen lines together on one page in a clear Devanagari typeface, with comfortable line spacing and generous margins. The page remains in Hindi.

In the finished book, this is an unnumbered closing page without a running header. Place the glossary, chapter sources, any index, acknowledgements and credits before it, so the song is the last content the reader encounters. Record its provenance in the preceding acknowledgements as the version supplied by the primer's author and sung in gratitude to Babaji; no lyricist or composer is identified in the supplied text. Keep explanatory notes and attribution details off the song page. The opening portrait and Babaji's wish introduce his endeavour; the final song expresses gratitude for that endeavour and the humane path it makes available.

Table of contents

Opening page - Babaji and His Wish for Humanity

Preface - Understanding That Can Be Lived

Part I - Beginning with Ourselves

1. What Are We Really Looking For?
2. The Body and the Conscious Self
3. Our Inner Life: Expectation, Thought, and Desire

Part II - Understanding the World We Belong To

4. Existence Is Coexistence
5. Our Place in Nature
6. From Assumption to Understanding

Part III - Living Well with Other People

7. What Makes Life Valuable?
8. Trust, Respect, and Justice
9. Family: Our First Place of Shared Living
10. Freedom, Responsibility, and Character

Part IV - Bringing Understanding into Daily Life

11. Caring for the Body
12. Work, Wealth, and Having Enough
13. Education for a Whole Life
14. Beauty in What We Make and How We Live
15. Science and Technology with a Human Purpose

Part V - Building a Society We Can Trust

16. Working Together with a Shared Purpose
17. An Undivided Human Society
18. Living Responsibly with the Earth

Part VI - The Continuity and Fulfilment of Life

19. Life, Death, and What Continues
20. Awakening in Everyday Life

Back matter: A Small Guide to Essential Terms; Sources and Further Reading by Chapter.

Final page - A Hindi Song of Gratitude to Babaji

Chapter objectives and learning sequence

The order moves from a question the reader can recognise, to a proposal about the human being, to an account of existence, and then to values expressed in relationships, work, society and nature. It ends by distinguishing kinds of continuity and returning to the fulfilment of the human possibility. Each chapter has one main learning task: a particular possibility to understand and the basis on which it can be fulfilled. The table states that contribution; each chapter plan below gives its guiding question and develops the necessary conditions. The fuller classifications in the concept map and source notes need not all be mastered at once.

Inquiry has two passes. Chapters 1 and 3 establish how to approach a proposal and distinguish a wish for harmony from a present assumption. Chapters 4 and 5 state the larger account of existence and nature as proposals to examine. Chapter 6 then gives the fuller account of understanding, realisation, and evidence in living, using a study meeting in which learners examine those earlier proposals and their meaning in living. This is why Chapter 6 follows the account of nature rather than serving as the first permission to question it.

Chapter	Possibility and its basis	What leads into the next chapter	Scenes
1. What Are We Really Looking For?	A connected inquiry into continuing fulfilment: resolution, prosperity, trust and coexistence. Begin from real satisfaction and examine what sustains a whole life.	Who is the one seeking fulfilment, and what kinds of needs are involved?	E01
2. The Body and the Conscious Self	Appropriate responses to different needs through understanding body and <i>jeevan</i> in their joint life: bodily provision and meaningful relational fulfilment.	How do expectation, thought and desire work together, and what guides them?	E02
3. Our Inner Life: Expectation, Thought, and Desire	A coherent direction for <i>asha - vichar - ichha</i> through understanding. Keep both evaluative triplets and all three eshanas connected to this central inquiry.	What wider reality do the self and its choices belong to?	E03; E04 secondary
4. Existence Is Coexistence	Understanding the reality within which human fulfilment is possible: distinct, active units inseparably present in all-pervading <i>satta</i> .	Where do bodies, living things, animals, and humans fit within this reality?	E05
5. Our Place in Nature	Conscious participation in nature through understanding the four orders and their relationships; distinguish material formation, <i>jeevan's</i> constitution and awakening.	How can we understand this account and examine its meaning for human happiness?	E06 - E07
6. From Assumption to Understanding	Making an explanation one's own through study and examination in living; distinguish demonstrated learning from the complete account of realisation and evidence.	What, then, counts as value in what we are and do?	E08; E03 returns
7. What Makes Life Valuable?	Recognising and fulfilling value in oneself, relationships and useful things, with each value family given its connected meanings.	How are values recognised and fulfilled between people?	E07; E01 returns
8. Trust, Respect, and Justice	Dependable, mutually fulfilling relationships through recognition, value fulfilment, evaluation and mutual satisfaction, including needed correction.	Where can these relationships first be learned and practised together?	E09; E02 - E03 return
9. Family: Our First Place of Shared Living	Humane living learned and continued across generations through family participation; <i>putreshana</i> joins capable people with the trio's purposes of provision and recognition.	What makes a person's freedom and conduct dependable?	E09; E11, E14 prepare wider roles

Chapter	Possibility and its basis	What leads into the next chapter	Scenes
10. Freedom, Responsibility, and Character	Dependable freedom through understanding, competence and accountable conduct; connect <i>nyaya - dharma - satya</i> with <i>mulya - charitra - niti</i> .	How does responsible living include care for the body?	E10 - E11; E04, E09 return
11. Caring for the Body	Meaningful participation across changing bodily capacities through care, support and understanding-guided regulation of thought, behaviour and work.	What material provision supports this care and wider participation?	E12; E07 returns
12. Work, Wealth, and Having Enough	Assured provision for family life, learning and contribution through actual resources and right use; distinguish humane <i>vitteshana</i> from unbounded gain.	How can the understanding and skills for such living be learned and passed on?	E13; E07, E11 return
13. Education for a Whole Life	Understanding becoming another person's own capacity to live and teach through education, formed dispositions, practice and practical skill.	How do skill and human purpose shape what we make?	E14; E08 returns
14. Beauty in What We Make and How We Live	Thoughtful, useful and beautiful making through understanding what an object fulfils for the people using it.	How should the same purpose guide more powerful tools?	E15
15. Science and Technology with a Human Purpose	Technical capability serving understood human purposes through evidence about need, means, access, maintenance and consequences.	How can people coordinate their skills and decisions?	E16; E10, E13 return
16. Working Together with a Shared Purpose	Dependable cooperation through shared competence, responsibility and evaluation, including continuity when an experienced member is absent.	How can these arrangements extend to a society people can trust?	E17; E11, E14 return
17. An Undivided Human Society	Humane belonging and accountable provision beyond familiar people through the five functions and wider participation; explain <i>lokeshana's</i> humane purpose.	How does collective provision depend on responsible participation in nature?	E18; E17 returns
18. Living Responsibly with the Earth	Participation that maintains the natural conditions of provision through understood inputs, replenishment, limits and changes to production and use.	Material renewal and transmitted ways of living raise a further, distinct question about the continuity of <i>jeevan</i> .	E07; E06, E16 - E18 return
19. Life, Death, and What Continues	Understanding the significance of continuity while distinguishing bodily change, enduring individual <i>jeevan</i> and learning passed between people.	What would the fulfilment of understanding mean in a life lived now?	E09, E12 return
20. Awakening in Everyday Life	The full human possibility proposed by MD: realised understanding fulfilled throughout living. Connect completions, motives and freedom from delusion with Babaji's <i>dev-manav</i> wish.	Return the reader to the opening questions with a clearer basis for continued inquiry and living.	E01, E05, E08 - E09, E13 - E14, E17 - E18 return

Essential concepts and chapter coverage

This is the book's authoring map. It covers the essential concept families, the threads on dharma, family, technology, organisations and humane tradition, and the three eshanas with their connected motives. Each row identifies the meaning the reader should acquire, where the explanation begins and develops, and what belongs in the glossary or chapter notes. Chapter numbers refer to the table of contents. An early question can prepare a concept before its source name is introduced.

Use ordinary English to establish the distinction, then introduce the source term once it helps. The main narrative carries the connections needed for later chapters; the glossary reconnects those explanations with their names; notes provide complete classifications, translation decisions and primary pages. A concept listed in notes still needs its essential meaning explained in the chapter. These are connected concepts, not independent lessons or an exhaustive dictionary of the corpus.

Essential concept	Meaning to develop in the main text	Chapter path	Glossary and chapter notes
Continuing happiness and the four aspirations - <i>sukh, samadhan, samriddhi, abhay, sah-astitva</i>	Distinguish passing pleasure from continuing fulfilment. Connect resolution within the person, family prosperity, social trust and fearlessness, and participation with nature without making them exclusive compartments.	Introduce 1; develop 7, 12, 17 - 18; bring together 20.	Gloss all five terms. Notes connect the four aspirations across the six parts.
Body and conscious self - <i>sharir, jeevan</i>	Explain distinct requirements and joint participation: material provision for the body, understanding and relational fulfilment for the conscious self.	Introduce 2; develop 3, 5, 11 - 12; revisit 19 - 20.	Keep jeevan as the defined source term. Chapter 5 notes introduce its constitutional account.
Material and conscious units - <i>jada, chaitanya</i>	Explain the distinction between changing material composition and conscious jeevan. Animal and human life involve body and jeevan together.	Prepare 2; name and explain 5; return 19.	Gloss both terms. Technical atom terminology belongs in Chapter 5 notes.
Existence as coexistence - <i>ikai, satta, sah-astitva</i>	Distinct, active units exist inseparably in all-pervading, unchanging satta. Social cooperation and ecological dependence are entrances to, not the full meaning of, coexistence.	Introduce 4; develop 5 - 6; return 18 - 20.	Gloss each term. Chapter 4 notes distinguish philosophical and familiar scientific uses of space and energy.
Inseparable presence in <i>satta - sampriktata; bheega, ghira, dooba</i>	Explain units as inseparably present in the all-pervading reality, with regulation, activeness and forcefulness understood together.	Introduce 4; develop 5; return 18, 20.	Chapter 4 notes give soakedness - forcefulness, surroundedness - regulation and submergedness - activeness, with source pages and limits of literal analogy.
Four aspects of a unit - <i>rupa, guna, swabhava, dharma</i>	Ask about form, effects in relationship, characteristic functioning and inseparable innateness. Explain the distinctions through the four orders.	Prepare 4; explain and name 5; apply 6 - 7, 14, 18.	Gloss all four. Chapter 5 notes give the fuller table without reducing it to a senses-versus-understanding binary.
Four orders and complementarity - <i>padarthavastha, pranavastha, jeevavastha, gyanavastha; purakta</i>	Explain material things, living bodily composition, animal life and human life through their activities, contributions and relations, including transformation and death.	Introduce 5; develop 11 - 12, 15, 18.	Four-order figure in 5; source notes distinguish swabhava from cumulative dharma.

Essential concept	Meaning to develop in the main text	Chapter path	Glossary and chapter notes
Law, regulation and balance - <i>niyam, niyantran, santulan</i>	Connect lawful activity, regulation and balance in relationships. Explain what responsible human participation must understand and sustain.	Introduce 4 - 5; apply 10 - 11, 15, 18.	Gloss the distinctions. Notes preserve natural and humane contexts instead of assigning each term to one order.
Development and awakening - <i>vikas-kram, vikas, jagriti-kram, jagriti</i>	Distinguish development towards constitutional completeness from the development of conscious understanding and awakened living.	Introduce 5; deepen 6, 19 - 20.	Chapter 5 notes explain technical development terms without turning them into a modern evolutionary timeline.
Three completions - <i>gathan-poornata, kriya-poornata, acharan-poornata</i>	Distinguish jeevan's constitutional completeness, completeness of conscious activities and their dependable expression in conduct.	Introduce together 5; prepare through 6, 10, 19; explain fully 20.	Gloss all three. Chapter 20 notes retain their source-defined relations and classifications.
Animal and humane consciousness - <i>jeev-chetna, manav-chetna</i>	Explain the change from living primarily by sensory concerns to understanding guiding sensitivity, bodily care and participation.	Introduce contrast 3; deepen 6, 10, 12; bring together 20.	Define the technical names without ranking people's worth. Detailed activity account belongs in 3 and 20 notes.
Further consciousness distinctions - <i>dev, divya chetna</i>	Explain the change in governing propensity: the three eshanas in manav, lokeshana and beneficence in dev-manav, and eshana-free participation grounded in coexistence in divya-manav.	Orient in 3; develop through 9, 12 - 13, 16 - 17; compare explicitly in 20.	Chapter 20 notes preserve the five human categories within the four consciousness orientations and the source's distinctions of perspective, propensity and nature. Do not invent a numerical ladder of progressively activated faculties.
Four bodily preoccupations and three obsessions - <i>char vishaya, teen unmad</i>	Explain the limits of making food, sleep, protection and sexuality the whole purpose of human life, and the unbounded pursuit of consumption, gain and sexuality.	Introduce meanings 3; develop 10 - 12, 15.	Chapter 3 notes list ahara, nidra, bhaya, maithun; Chapter 12 notes clarify kamunmad, bhogunmad and labhonmad. Ordinary bodily needs remain positively understood.
Three humane motives - <i>putreshana - vitteshana - lokeshana</i>	Connect progeny and people's participation in family/social continuity, justly acquired resources for right use, and recognition that supports an undivided humane society. Explain how governing motives change across the consciousness account, beyond ordinary desires for children, money or fame.	Introduce the whole triad in 3; develop putreshana in 9 and 13, vitteshana in 12, lokeshana in 16 - 17; reunite and compare orientations in 20.	Definitions: MVD p. 65. Compare MVD pp. 85 - 89, 147, 304, 321 and SB PDF pp. 93 - 94. Explain eshana-mukti without implying the extinction of asha, thought, desire or participation.
Expectation, thought, desire and imagination - <i>asha - vichar - ichha; kalpanasheelta</i>	Explain expectation on a basis, thought directed towards resolution, and images of form, purpose and possibility together; show how understanding brings their direction into agreement.	Introduce as a complete triad in 3; develop 6, 10, 13; revisit 20.	Gloss the technical roles and their faculty/activity relations. Do not turn them into a rigid timetable or claim the triad alone proves jeevan's constitution.

Essential concept	Meaning to develop in the main text	Chapter path	Glossary and chapter notes
Five faculties and ten activities - <i>mun, vritti, chitta, buddhi, atma</i>	Explain enough of the connected inner activity for the reader to follow choices, comprehension and realisation without memorising the full map.	Accessible account 3; develop 6; full significance 20.	Chapter 3 notes give all five activity pairs; Chapter 20 notes relate their full operation to awakening.
Perspectives guiding choice - <i>priya - hita - labha; nyaya - dharma - satya</i>	Present both complete triplets. Explain sensory pleasantness, bodily nourishment/health and acquisitive gain in relation to justice, resolution and truth. Distinguish seeking more value in exchange than the labour or useful contribution supplied from rightful remuneration, gift and award.	Introduce both together in 3; develop 6 - 8, 10, 12; reunite in 10 and 20.	Gloss both triads and their paired alternatives: <i>priya - apriya, hita - ahita, labha - alabha; nyaya - anyaya, dharma - adharma, satya - asatya</i> . Avoid invented one-to-one pairings between the triads.
Proposal, natural acceptance and inquiry - <i>prastav, sahaj swikriti</i>	Explain jeevan's natural acceptance of justice, dharma and truth, including before their meanings are fully understood. Develop the distinction between this orientation, a present preference and understanding established through study and living.	Proposal in 1; natural-acceptance inquiry in 3; fuller method 6; return 13, 20.	AVD PDF pp. 70, 79, 156 distinguish acceptance, incomplete understanding and its fulfilment through study and realisation. Preserve all three together.
Knowing, believing, recognising and fulfilling	Connect understanding reality with recognising relationships and fulfilling them. Distinguish accepting a statement from knowing what it means.	Introduce 6; apply 8 - 10, 13, 17; return 20.	Chapter 6 notes provide source terms and explain recognition/fulfilment in nonhuman nature without attributing conscious deliberation to stones.
Assumption, delusion and truth - <i>manyata, bhram, satya</i>	Explain how an accepted view can differ from reality and how inquiry corrects it. Develop truth through the fuller account of coexistence.	Prepare through misunderstanding in 3; explain 6; apply 10; return 20.	Gloss the distinction between a corrected assumption and comprehensive freedom from delusion.
Direct recognition, comprehension, realisation and evidence - <i>sakshatkar, bodh, anubhav, praman</i>	Distinguish direct recognition in the faculty account, comprehension, realisation and evidence in living; connect study with experiment and practice.	Prepare 3; explain 6; apply 8, 13; bring together 20.	Chapter 6 notes distinguish the learner's <i>shravan - manan - arth-bodh</i> from faculty correspondences and the source's stated learning direction. Everyday learning must not certify complete <i>anubhav</i> .
Three contents of knowledge - existence, jeevan and humane conduct	Explain why understanding the world, the conscious self and humane living belong together.	Name together 6; develop 13, 15; return 20.	Gloss the three source formulations with pointers to Chapter 6; do not claim one wording exhausts every primary enumeration.
Jeevan values - <i>sukh, shanti, santosh, anand</i>	Develop happiness, peace, contentment and bliss as connected fulfilment within jeevan, extending beyond a passing agreeable mood.	Introduce 7; develop 8 - 10, 12; return 20.	Chapter 7 notes explain the four values and source-supported faculty relations.
Six humane qualities - <i>dhirata, virata, udarata, daya, kripa, karuna</i>	Show steadfastness in justice, making justice available, generosity and forms of help suited to another's development. Preserve their distinct meanings.	Introduce through examples 7; develop 10, 13, 16; return 20.	Complete six-term inventory in Chapter 7 notes; Chapter 10 notes distinguish content/means and receptivity in the forms of help.

Essential concept	Meaning to develop in the main text	Chapter path	Glossary and chapter notes
Nine established relationship values	Explain trust, respect, affection, care, guidance, reverence, willing emulation of excellence, gratitude and love through what relationships call for.	Value families in 7; principal explanation 8; develop 9 - 10, 13, 16.	Chapter 8 notes list vishwas, samman, sneh, mamata, vatsalya, shraddha, gaurav, kritagyata and prem with precise meanings.
Nine expressed relationship values	Make the relation between recognising a value and expressing it in dependable conduct explicit through two or three worked pairs.	Introduce 8; develop 9 - 10, 13, 16.	Chapter 8 notes give every established/expressed pair, checked against source order and definitions.
Thirty-value enumeration	Give readers an organised view of jeevan values, humane qualities, relationship values and object values after they have met their meanings.	Orient in 7; develop families 8 - 10, 14; bring together 20.	Chapter 7 notes contain 4 + 6 + 9 + 9 + 2. Repeated terms in distinct defined positions remain distinct entries.
Justice and evaluation - <i>nyaya, mulyankan</i>	Recognise a relationship, fulfil its values, evaluate actual fulfilment and arrive at mutual satisfaction. Explain errors of evaluation and correction.	Prepare 3, 6; explain fully 8; apply 9 - 10, 16 - 17.	Chapter 8 notes distinguish over-, under- and mis-evaluation; the justice figure retains all four components.
Trust, intention, competence and conduct	Distinguish shared aspiration, a particular intention, ability and actual fulfilment. Show responsibility, protection, repair and growing dependability.	Prepare 2 - 3; explain 8; apply 9 - 10, 16 - 17.	Cross-reference vishwas and evaluation. Wanting happiness does not establish that every particular intention is harmless.
Seven recognised relationships - <i>sambandh</i>	Explain parent - child, husband - wife, teacher - learner, siblings, responsible participant - associate, participation in orderliness and friendship through their purposes.	Prepare 8; map and explain 9; develop 10, 13, 16 - 17.	Chapter 9 notes give source names and responsibilities: sambandh has definite expectations towards completeness; sampark has voluntary expectations. Include biological and accepted sibling-like relationships, preserving each relationship's purpose.
Values, character and ethics - <i>mulya, charitra, niti</i>	Connect what relationships fulfil with definite humane conduct and the protection and right use of body, mind and wealth.	Value in 7; develop 8 - 9; bring together 10; apply 11 - 18.	Gloss all three; Chapter 10 notes preserve the distinct source definitions and their connected account.
Rightful wealth, fidelity and kindness - <i>swa-dhana, swa-nari/swa-purusha, daya</i>	Explain rightful receipt, reciprocal marital fidelity and support for another's development through continuing responsibilities.	Prepare care and partnership in 8 - 9; explain 10; develop 12 - 13, 16.	Chapter 10 notes retain remuneration, gift and award, distinguishing production's origin from the recipient's rightful acquisition.
Freedom and action - <i>swatantrata, karm-swatantrata, karma</i>	Connect aspiration, choosing, action, effects and responsibility. Explain agreement among thought, speech and conduct and freedom to correct one's action.	Action in 3; fuller freedom and responsibility 10; apply 12, 16, 19.	Chapter 10 notes distinguish deluded and awakened freedom without implying control of every physical outcome.

Essential concept	Meaning to develop in the main text	Chapter path	Glossary and chapter notes
Health, restraint and right use - <i>swasthya, sanyam, sadupyog</i>	Relate bodily nourishment and functioning to understanding-guided thought, behaviour and work, including care, changing capacities and shared provision.	Prepare 2 - 3, 9 - 10; explain 11; connect 17.	PS printed pp. 207, 216 defines sanyam, sanyamata, swasthya and swasthya - sanyam; examples apply these meanings without prescribing a medical regimen.
Prosperity, labour, production, exchange and reserves - <i>samriddhi, shram, utpadan</i>	Connect assessed needs, competence, resources, actual provision beyond need and assurance; explain just work, exchange, sharing and responsible reserves.	Prepare 9 - 10; explain 12; develop 15 - 18; revisit 20.	Chapter 12 notes distinguish need, production, receipt and provision. Chapter 17 notes retain exchange and reserves as paired functions.
Education and dispositions; knowledge, wisdom and science - <i>shiksha-sanskar; gyan, vivek, vigyan</i>	Connect understanding, a disposition to live by it, clarity about purpose and the practical competence to fulfil it.	Prepare 3, 6, 9; explain 13; apply 15 - 16; return 20.	Chapter 13 notes define sanskar and the knowledge distinctions; glossary links back to the three contents of knowledge.
Usefulness and aesthetic refinement - <i>upayogita, kala</i>	Explain useful fulfilment and the skill, ease, convenience and beauty that refine it; distinguish these from price or decoration alone.	Prepare 7, 12; explain 14; apply 15.	Chapter 14 notes ground the object-value distinction and identify particular design examples as applications.
Undivided society and universal orderliness - <i>akhand samaj, sarvabhaum vyavastha</i>	Explain shared human belonging and five paired social functions through participation extending beyond the household.	Prepare 9, 11 - 13, 16; explain 17; connect 18, 20.	Chapter 17 notes preserve education - sanskar, justice - protection, production - work, exchange - reserves, health - restraint, and the ten council levels in the verified source decisions below.
Cyclical production and replenishment - <i>avartansheel</i>	Follow provision through natural inputs, transformations, returns and limits; ask whether use sustains the conditions on which it depends.	Prepare 5, 12, 15; explain 18; return 20.	Chapter 18 notes distinguish the philosophical aim from factual claims about specific production systems.
Continuity of jeevan and re-embodiment	Distinguish bodily change, enduring individual jeevan and retained awakening from understanding transmitted between people. Explain re-embodiment alongside kaivalya, in which further bodily journeys are no longer needed.	Prepare 2, 5, 13; explain 19; return 20.	The verified passage map distinguishes source-defined sanskar, retained awakening and humane tradition. It does not imply intact transfer of every memory, habit or skill.
Liberation and spiritual reality - <i>mukti, bhram-mukti, adhyatma</i>	Explain freedom from delusion through realised reality and humane participation; understand the conscious self within all-pervading reality.	Prepare 4, 6, 19; principal explanation 20.	Gloss each term. Chapter 20 notes distinguish developing clarity, complete realisation and liberation from delusion.
The name Madhyasth Darshan - <i>madhyasth, darshan</i>	Give the reader a brief explanation of the book's philosophical name in relation to mediation, orderliness and understanding reality.	Brief orientation in preface; explain 4; develop 5, 20.	Chapter 4 notes preserve source meanings; avoid reducing madhyasth to compromise or indifference.

Essential concept	Meaning to develop in the main text	Chapter path	Glossary and chapter notes
Dharma as innateness and humane evaluation - <i>dharma, dharma - adharmā</i>	Develop cumulative innateness across the four orders, happiness as human dharma, and evaluation of thought through resolution and orderliness.	Happiness question in 1; name in 5; develop 7, 10; return 20.	One glossary entry with context-specific explanations and cross-references; neither religious affiliation nor an external duty list substitutes for these meanings.
Family and wider human belonging - <i>parivar</i>	Explain family as a place to learn and fulfil relationships, with responsibilities extending to neighbours and society.	Care in 8; principal explanation 9; develop 12 - 13, 17.	Chapter 9 notes link family participation with the seven relationships without treating them as seven household occupants.
Human purpose in technology	Examine whether a tool fulfils a real need, who can use and maintain it, and how its operation affects work, relationships and resources.	Prepare 12, 14; explain 15; develop 16 - 18.	Chapter 15 notes connect purpose and right use to gyan - vivek - vigyan; technical/environmental claims need their own evidence.
Complementary work and self-governance	Explain shared purpose, complementary skills, accountable roles, fair exchange, evaluation, disagreement and continuity beyond one leader.	Prepare 8 - 10, 13; explain 16; develop 17.	Chapter 16 notes connect organisational applications with relationship values and source-defined responsibility.
Awakening and humane tradition - <i>jagriti, manav parampara</i>	Connect understanding expressed in living with helping others understand and sustaining a humane tradition through teaching and example.	Prepare 6, 9, 13, 16, 19; bring together 20.	Chapter 20 notes distinguish individual completion from the continuity of tradition; neither is reduced to a household's success.

The four aspirations recur across the five social functions and all six parts. Their relationships should remain visible in the prose even when a particular chapter concentrates on one concept. The example catalogue below supplies the scenes through which those meanings can be developed; the source map supplies the primary grounding.

Connected concept groups and their chapter treatment

Readers should encounter the groups in which Madhyasth Darshan develops its account, as well as the individual concepts. Introduce each central group together in plain English, give its source names together, explain the relationship among its members through a shared situation, and return to the complete group after developing a particular member. A chapter may prepare a group before explaining it fully, but its connections must be intelligible in the main text. Complete lists and precise source wording remain available in the notes.

The familiar order of a list helps readers recognise it across chapters. That order can express a set of related aspects, a correspondence, a developmental distinction or a process. Explain which relationship is meant. Use arrows only when the explanation establishes a direction or succession; use a joined list or table for coordinated aspects. In particular, *asha - vichar - ichha* are connected powers, and *priya - hita - labha* and *nyaya - dharma - satya* are connected evaluative perspectives. Their printed order does not make them three compulsory moments of every decision or establish a one-to-one pairing between the triplets.

Group to keep together	Connection the reader should understand	Chapter treatment and recurring scene
Resolution, prosperity, fearlessness and coexistence - <i>samadhan - samriddhi - abhay - sah-astitva</i>	These connected human aspirations concern understanding, dependable provision, trust and participation in existence. Each bears on the others across person, family, society and nature.	Name the whole group in 1 (E01); recall it through care, work and provision; bring it together in 17 - 18 and 20. Do not leave each aspiration confined to a separate part of the book.
Expectation, thought and desire - <i>asha - vichar - ichha</i>	Explain expecting or hoping, considering and evaluating, and forming a desired image or possibility as connected inner activity. What is accepted and understood gives these activities their direction. Understanding guides this triad; it does not replace asha as one of its members.	Chapter 3's title and main explanation carry all three (E03). Revisit their agreement and correction in 6, 10, 13 and 20. Keep the same English - source-term correspondence throughout.
Pleasantness, bodily benefit and gain; justice, dharma and truth - <i>priya - hita - labha; nyaya - dharma - satya</i>	Present the two triplets side by side as bases of evaluation. Explain how a life confined to sensory attraction, bodily advantage and gain differs from understanding that guides sensitivity through justice, resolution and truth. In this humane triplet, explain dharma through happiness, resolution and orderliness while retaining its earlier meaning of innateness.	Introduce both complete triplets in 3 (E03 - E04); develop truth in 6, happiness in 7 and justice in 8; reunite all three humane perspectives in 10 (E10 - E11) and 20. Use the Chapter 10 subsection title Justice, Resolution, and Truth .
Five faculties and their five activity pairs - <i>mun - vritti - chitta - buddhi - atma</i>	Relate tasting/selection, deliberation/analysis, contemplation/visualisation, comprehension/resolve and realisation/authenticity in one map of ten activities. Distinguish the faculty, its power and its activities, rather than substituting one list for another.	Chapter 3 develops inner activity through asha - vichar - ichha (E03), with the complete five-faculty map and all five pairs together in its notes. Develop comprehension and realisation in 6 (E08), and coordinated awakened activity in 20.
Knowing, believing, recognising and fulfilling - <i>janna - manna - pehchanna - nirvah karna</i>	What one knows or assumes bears on what one accepts, recognises in relationship and fulfils. Explain the connection through the same care arrangement, including correction of what was merely assumed. Recognition and fulfilment in nonhuman nature need their distinct scope.	Introduce the complete fourfold account in 6 (E08); revisit recognition and fulfilment in 8 - 10, 13 and 17. A caring action or sincere belief alone does not establish knowing.
Listening, reflection and grasping meaning - <i>shravan - manan - arth-bodh</i>	Explain these connected activities of learner and teacher through attentive listening, thinking through an explanation and grasping its meaning. Relate them to the learner's ability to explain and examine what is understood.	Name together in 6 (E08), return in 13 and 20. The source note distinguishes this learner-study triad from the <i>manan - tulana - sakshatkar - bodh</i> faculty mapping.
Study; experiment and practice; realisation and evidence - <i>adhyayan; prayog aur abhyas; anubhav aur praman</i>	Explain a direction the source explicitly states as first, second and third. Within this account, distinguish direct recognition (<i>sakshatkar</i>), comprehension (<i>bodh</i>), realisation (<i>anubhav</i>) and evidence (<i>praman</i>); faculty correspondences alone do not establish an automatic four-step succession.	Chapter 6 (E08) presents the learning direction and its relation to living; 13 and 20 return through practice, communication and fulfilment. Keep the page-specific distinction in the source note.
Three contents of knowledge - <i>astitva-darshan-gyan - jeevan-gyan - manaviyata-poorn a-acharan-gyan</i>	Understanding existence, the conscious self and humane conduct belongs to one account of what the human being can know and live. A chapter on nature or on conduct develops part of this connected content.	Name and explain the triad together in 6 (E08); return in 13, 15 and 20. Recall the courtyard, care arrangement and learner rather than assigning three unrelated examples.

Group to keep together	Connection the reader should understand	Chapter treatment and recurring scene
Knowledge, wisdom and science - <i>gyan - vivek - vigyan</i>	Connect understanding reality, clarity about humane purpose and right use, and knowing how to accomplish that purpose. Distinguish this functional relationship from the preceding triad of knowledge's contents.	Prepare in 6; explain together under Knowledge, Wisdom, and Science in 13 (E14); use all three to examine the pump in 15 (E16) and learning in 16.
Form, properties, characteristic nature and innateness - <i>rupa - guna - swabhava - dharma</i>	These are four questions about the same unit and its relationships. Form alone does not explain its effects, participation or inseparable innateness.	Chapter 5 uses the same courtyard units (E06) for all four questions; return to the meal, cup and natural cycles in 7, 14 and 18. Keep a complete four-aspect table in the notes.
Four orders - <i>padarthavastha - pranavastha - jeevavastha - gyanavastha</i>	Show material, plant/bio, animal and human orders together, with complementarity and the cumulative dharmas of existence, growth, hope to live and happiness. Keep the order-specific account distinct from a biography of an individual moving through species.	Chapter 5's courtyard and meal (E06 - E07) carry the complete group and figure; 18 returns to their participation and material limits.
Soaked, surrounded and submerged - <i>bheega - ghira - dooba, within sampriktata</i>	These describe inseparable presence in satta. Preserve the checked correspondences: soakedness with forcefulness, surroundedness with regulation, submersion with activeness. Their relationship needs the philosophical explanation of pervasiveness.	Introduce together in 4 (E05), with precise language in its notes; recall in 5 and 20. The room is an entrance to the account, not a literal immersion model.
Law, regulation and balance - <i>niyam - niyantran - santulan</i>	Explain the connection between lawful activity, regulation and balanced participation in relationships. Humane balance requires the understanding and resolution developed in the human account.	Prepare in 4, explain together in 5 (E06), apply to shared provision in 10 and 15, and return in 18 (E10, E16, E07).
Development and awakening; three completions - <i>vikas-kram - vikas - jagriti-kram - jagriti; gathan-poornata - kriya-poornata - acharan-poornata</i>	Show how development towards constitutional completeness differs from awakening in jeevan, then relate constitutional completeness, complete conscious activity and complete conduct. Readers need both the differences and the connections.	Introduce both complete groups briefly in 5; deepen understanding and continuity in 6 and 19; explain their fulfilment together in 20 through the returning care, learning and work scenes.
Consciousness distinctions - <i>jeev - manav - dev - divya chetna</i>	Orient the reader to the whole classification while giving the principal contrast between sensory-led and understanding-led living enough explanation. The further distinctions concern forms of awakened living, not people's equal worth.	Chapter 3 explains the principal contrast and gathers the complete classification in its notes. Chapter 20 explains all four together and includes the substantive comparison in its main text, with source qualifications in notes. Do not invent a ladder of progressively activated faculties.
Three humane motives and their further fulfilment - <i>putreshana - vitteshana - lokeshana</i>	Explain the connected orientation towards family/social continuity, resources for right use, and recognition for humane order. Then distinguish the three eshanas in manav from lokeshana-led beneficence in dev-manav and eshana-free beneficence in divya-manav.	Introduce together in 3; follow the learning, provision and wider participation scenes in 9, 12 - 13 and 16 - 17 (E13 - E14, E17 - E18); use the comparison below in 20.
Four bodily preoccupations and three obsessions - <i>ahar - nidra - bhaya - maithun; kamunmad - bhogunmad - labhonmad</i>	Keep ordinary bodily requirements distinct from confining human purpose to them, and show the related unbounded pursuits named by the second group. Keep each complete grouping available alongside the focused explanations of consumption and gain.	Introduce ordinary meanings in Chapter 3's prose, with both complete groups gathered in its notes; revisit the relevant meanings through character, bodily care and provision in 10 - 12 (E09, E12 - E13).

Group to keep together	Connection the reader should understand	Chapter treatment and recurring scene
Four jeevan values - <i>sukh - shanti - santosh - anand</i>	Develop happiness, peace, contentment and bliss as related fulfilments within jeevan, with distinct source meanings. They are more than four descriptions of a pleasant mood.	Introduce all four in 7 (E07 with E01), develop their relation to understanding and living, and return to the whole group in 20. Faculty relations belong in the source note.
Six humane qualities in their two connected triads - <i>dhirata - virata - udarata; daya - kripa - karuna</i>	Explain steadfastness in justice, making justice available and generous participation together; distinguish the forms of help by what understanding or receptivity another needs. Show their connection in the same responsible person.	Explain both triads in 7; develop work and learner support in 10 and 13 (E11 , E14), and collective participation in 16. Keep all six source meanings together in the notes.
Thirty values and the established/expressed pairs - 4 jeevan + 6 humane + 9 established + 9 expressed + 2 object values	Give the family structure after readers meet its meanings; then show how a relationship value finds its appropriate expression. Keep each of the nine checked pairs intact when moving between chapters.	Whole-family orientation in 7; principal paired explanation in 8 (E09); learning in 13 and usefulness/aesthetic refinement in 14 (E14 - E15). The note inventories preserve all nine pairs.
Justice's four connected components - recognition of relationship, fulfilment of values, evaluation and mutual satisfaction	Carry one relationship through what it calls for, what people actually do, how fulfilment is examined and whether it is mutually satisfying. Evaluation can call for renewed understanding and correction.	Chapter 8 explains and illustrates all four together (E09) and uses its planned figure; return in 9 - 10 and 16 - 17. Keep the whole account visible when one chapter emphasises a component.
Values, character and ethics; body, mind and wealth - <i>mulya - charitra - niti; tan - man - dhan</i>	Relate what is fulfilled in relationships, definite humane conduct, and protection/right use. Show how bodily work, understanding and resources participate together. Give rightful wealth, fidelity and kindness as the connected character formulation.	Bring the first triad together in 10 under Values, Character, and Ethics , using E09 - E11 ; apply across 11 - 18. Chapter 10 notes preserve <i>swa-dhana - swa-nari/swa-purusha - daya</i> and supported modes of rightful receipt.
Health and restraint; nourishment, protection and right use - <i>swasthya - sanyam; poshan - sanrakshan - sadupyog</i>	Distinguish bodily nourishment and functioning from understanding-guided regulation of thought, behaviour and work. Explain their joint expression in humane participation, including changing capacities and access to support.	Explain the whole care grouping in 11 (E12), connect provision in 12 and collective responsibility in 17. PS printed pp. 207, 216 provides the definitions; care is their concrete application.
Education and dispositions; usefulness and aesthetic refinement - <i>shiksha - sanskar; upayogita - kala</i>	Preserve these as two distinct pairs. Learning includes understanding and its formation in living; making includes useful fulfilment and its thoughtful refinement. Practical skill connects their applications without merging their definitions.	Explain the first pair in 13 (E14) and the second in 14 (E15); bring both to appropriate technology and teaching newcomers in 15 - 16.
Five paired social functions - education - sanskar; justice - protection; production - work; exchange - reserves; health - restraint	Keep each pair intact and explain how all five cooperate in fulfilling the four aspirations. Distinguish these functions from the ten levels of council participation, across which they recur.	Prepare through 9 and 11 - 16; explain the full set in source order in 17 (E18) with its planned figure; return in 18 and 20. A water project illustrates participation in these functions, not the entirety of society.

The seven recognised relationships also need their complete Chapter 9 map and their complementary responsibilities, as already specified in the concept map and note inventory. They form a relationship classification, not seven stages of social development. Similarly, paired relationship values are

correspondences, while justice's evaluation can lead back to renewed fulfilment. These differences should remain visible in the prose and figures.

Chapter titles should preserve the whole group when they explicitly name one, as Chapter 3 now does. Other chapter titles may remain everyday questions or themes. Within those chapters, use a few meaningful subsection titles that present a complete group: **Pleasantness, Bodily Benefit, and Gain** in 3; **Knowing, Believing, Recognising, and Fulfilling** in 6; **Happiness, Peace, Contentment, and Bliss** in 7; **Justice, Resolution, and Truth** and **Values, Character, and Ethics** in 10; **Knowledge, Wisdom, and Science** in 13. Explain the source terms alongside these headings' ideas in the prose. Avoid adding terminology to every title simply to display a list.

Three motives across forms of human living

Concern for children and continuity, material provision, and recognition gives readers a familiar entrance to the three eshanas. Madhyasth Darshan gives these motives specific humane meanings: *putreshana* - *vitteshana* - *lokeshana* belong together with *nyaya* - *dharma* - *satya* and *dhirata* - *virata* - *udarata*. Explain the connections among what a person seeks, the perspective guiding it and the conduct that expresses it. The motives are more than a neutral list of things everybody wants.

What the three eshanas mean

Motive	Meaning and connection to living	Scene and chapter path
Putreshana - progeny and human continuity	The wish for people's participation in family and social order, together with confidence in the continuation of the lineage. Keep children and generational continuity visible while explaining the larger purpose of preparing people to live responsibly. It is not fulfilled merely by having offspring, obtaining an heir or securing a child's prestige.	Introduce with the other two in 3. In 9, connect the family's care with the next generation's participation; in 13, extend E14 from learning a task to becoming capable of understanding, relationship and useful work. Return in 20.
Vitteshana - resources for right use	The wish for material means acquired through justice and directed to right use. Relate it to actual provision, prosperity and participation. Accumulation for comparison or unlimited gain does not become humane vitteshana simply because it concerns money. Rightful remuneration, gifts and awards retain their earlier definitions.	Principal explanation in 12 through E13 's food, tools and reserves. Connect the purpose of provision to children's learning, dependants and contribution beyond the household; return to the pump and shared work in 15 - 17 and gather the trio in 20.
Lokeshana - recognition for humane social order	The wish for recognition and its effective social support, guided by justice and dharma towards an undivided society. At the dev-manav level, the source explains reputation through the acceptance and emulation of awakening and the wider establishment of humane tradition. Preserve this meaning instead of equating it with celebrity or replacing the recognition element with generic helpfulness.	Prepare through trust and teaching in 8, 13 and 16. In 17, extend E17 - E18 to recognition that helps dependable work and understanding spread beyond the original group. Compare its governing role in dev-manav in 20.

These definitions follow MVD p. 65; the dev-manav explanation draws on p. 321. They give the trio a positive direction. A parent's concern, earning an income or appreciating recognition can open the inquiry, but its philosophical meaning depends on purpose, perspective and fulfilment.

How the governing motive changes

The comparison should remain visible in the main explanation, with fuller classifications in the notes. Beneficence (*upkar*) names the positive contribution to others' fulfilment that the later rows develop through understanding, teaching and participation. Here *manav* means humane living in the source's technical sense, not simply an ordinary or statistically typical person. *Jeev-chetna* describes a human orientation organised around the body and sensory concerns. Its two classified forms, *pashu-manav* and *rakshas-manav*, together with *manav*, *dev-manav* and *divya-manav* make the five-category account. Use the terms to explain the philosophical distinctions; a person's income, family size, job, illness or a single good or bad action cannot establish their category.

Orientation	Perspective and governing propensity	Everyday comparison to develop	Source and chapter use
Jeev-chetna in human living, including pashu-manav and rakshas-manav	Priya - hita - labha guide evaluation; the four bodily preoccupations and their associated obsessions organise purpose. The source differentiates the two forms through their characteristic conduct. It does not define this orientation by the three humane eshanas.	Ask how concern for a child's standing, accumulation or public credit can remain centred on personal advantage. Use the contextual source definitions when distinguishing reliance on others for relief, betrayal of trust and coercive domination. These are proposed illustrations of an orientation, not diagnoses of the characters.	MVD pp. 58 - 60, 85; SB PDF pp. 93 - 94. Introduce 3; revisit 10 - 12 and compare in 20.
Manav - humane living	Nyaya - dharma - satya guide the three eshanas, expressed with dhirata - virata - udarata. The person has understanding of comprehensive resolution, while its implementation can remain concentrated in limited fields, particularly putreshana and vitteshana.	Follow the same household preparing children for responsible living, making just provision and contributing dependably beyond itself. Recognition supports shared human purposes. Show the need for this understanding to become effective more widely, rather than treating the person as merely respectable or well intentioned.	MVD pp. 65, 85, 89, 304. Develop 9, 12 - 13, 16 - 17; reunite 20.
Dev-manav - lokeshana with beneficence	Dharma has prominence with justice and truth. Lokeshana is the stated propensity; people and resources are directed towards nurturing and extending humane tradition. Daya is prominent with kripa and karuna, alongside the humane qualities.	Extend the maintenance and learning scenes: people become capable of understanding, teaching and sustaining useful arrangements elsewhere. Recognition means acceptance and emulation of the humane achievement. The distinctive point is its governing purpose, not a larger donation, audience or organisation.	MVD pp. 86, 321; SB PDF pp. 93 - 94. Prepare 13, 16 - 17; explain 20.
Divya-manav - coexistence and eshana-free beneficence	The stated perspective and propensity are ultimate truth as coexistence. Eshana-mukti belongs to this account, with karuna prominent and beneficence expressing complete awakening. The eshana trio is no longer the governing motive.	Return to care, provision and teaching as participation for universal well-being. Explain the source account of action without dependence on fulfilling the eshana trio, while preserving understanding, choice and active contribution. A fictional selfless gesture cannot establish this attainment.	MVD pp. 81, 86, 88 - 89, 122, 147; SB PDF pp. 93 - 94. Full comparison in 20.

The familiar concerns recur, but the source does not preserve the same three motives as an unchanged classification at every level. Putreshana, vitteshana and lokeshana are stated together for *manav*; *lokeshana* receives the governing role for *dev-manav*; *divya-manav* is described through coexistence and freedom from eshana. The comparative movement from bodily preoccupations through the three eshanas and *lokeshana* to universal well-being is also explicit in *Paribhasha Samhita*, printed p. 2. Explain this direction without making it a guaranteed biography or a scale measured by possessions, children or reputation.

Eshana-mukti must not be translated as the loss of all desire, thought, expectation or action. The source continues to describe *asha* and all the activities of *jeevan* in awakened living. *Dev-manav*'s use of people and material resources also makes clear that a changed governing motive is compatible with practical

participation. Keep the source's distinctions of understanding, its expression and its scope; do not repeat the mistaken ladder in which only divya-manav has all ten activities.

Developing the recurring examples

Use the linked household, learning and water-maintenance scenes rather than introducing a new set of exemplary people. In **E14**, ask what the adult wants for the child and why: comparison and status can be contrasted with capability, justice and responsible participation. In **E13**, ask what the household seeks resources for and how it obtains and uses them. In **E17 - E18**, ask what recognition is doing: concentrating personal prestige, making dependable contribution visible, or enabling understanding and humane arrangements to continue through others. At each return, identify the perspective, motive, action and actual fulfilment together.

Chapter 20 can revisit these situations side by side to explain the four orientations. Give the source account first and make the proposed application explicit. The same outward act, such as providing a tool or teaching a child, does not by itself reveal the governing motive or certify manav, dev-manav or divya-manav. Avoid turning the household into a staged ascent through categories; its everyday questions help readers understand the distinctions and pursue study.

Introducing familiar words with specific meanings

These writing directions connect familiar English words with the meanings developed in Madhyasth Darshan. Begin with the experience or question, explain the distinction and introduce the source term when it helps. A word can have legitimate meanings in other traditions; this book should make its own use clear. The scene labels refer to the catalogue below and belong to the writing plan, not the finished chapter prose.

Lead with participation in care, learning, work and relationships. Conflict and correction deepen an explanation when they reveal what remains unfulfilled. Give each scene a question that brings its particular concept into view and return to actual conduct after explaining it. A useful activity, corrected judgement or moment of clarity does not by itself establish the larger claims about satta, jeevan, realisation or freedom from delusion.

Term and main explanation	Meaning to develop	Scene to build upon
Value - mulya (7)	What is fulfilled in existence and relationship, encompassing jeevan values, humane qualities, relationship values and object values.	E07, preparing and sharing a meal: distinguish nourishment, the usefulness of vessels, human care and cooperation, and fulfilment within the person. Follow a different contribution at each return.
Justice - nyaya (8)	Recognition of relationship, fulfilment of values, evaluation and mutual satisfaction, with correction and protection where needed.	E09, continuing care: follow an arrangement through practice and revision. Include the elder's participation as capacity allows and the carers' needs. Neither agreement nor silent endurance establishes that the relationship is fulfilled.
Dharma (5, 7, 10)	Inseparable innateness; cumulatively, existence, growth, hope to live and happiness. Human happiness needs understanding and resolution. Distinguish this from dharma - adharma as a perspective for evaluating thought.	E06, courtyard: explain the four orders. E01/E07, achievement and meal: ask what would make fulfilment continue. E10, shared water: examine how thought and resolve support resolution and orderliness.

Term and main explanation	Meaning to develop	Scene to build upon
Truth - satya (6, 10)	Reality as it is, understood and realised as coexistence: distinct units inseparably present in all-pervading satta. Truthful speech expresses an aspect of living with this understanding.	E05/E08, surroundings and inquiry: widen the learner's question beyond names and appearances. E07, meal: trace relationships in nature and human participation. These entrances require the fuller philosophical explanation.
Natural acceptance - sahaj swikriti (3, 6)	Explain natural acceptance of justice, dharma and truth alongside the need to understand their reality and fulfil them in living. AVD distinguishes this acceptance from already knowing what orderliness means.	E03, delayed care visit: both people can seek just relationship and clarity while misunderstanding the other's situation. Their shared orientation opens inquiry; preference alone does not settle what the relationship requires.
Ethics - niti (10)	Protection and right use of body, mind and wealth, directed towards fulfilled human needs and relationships, resolution, prosperity, trust and coexistence.	E11, repairer's work: knowledge diagnoses a real fault, bodily work fulfils a need, payment meets responsibility to contributors, and teaching helps a learner. E10 extends these questions to shared provision. Evaluate purpose and actual fulfilment together.
Character - charitra (10)	Rightfully received wealth, marital fidelity and kindness supporting another's development. Explain definite source meanings through dependable conduct.	E11: useful work, fair receipt and learner support, with gift and award as clarifying cases. E09: ongoing reciprocal fidelity. Erroneous receipt and secret involvement can be brief boundary cases rather than the main narrative.
Action - karma (3, 10)	Activity joined with aspiration, examined through the doer, cause, purpose, effect and consequence. Connect freedom to act with responsibility for evaluating results.	E04, tap repair: investigate, choose, act and inspect what follows, including unintended damage or need for help. Intending a good result neither guarantees it nor makes every misfortune the sufferer's fault.
Realisation - anubhav (6, 20)	Realisation of coexistence in jeevan, with authenticity and continuing evidence in living. Preserve the distinctions from information, assent and developing comprehension.	E08, study meeting: develop the learner's question through explanation and examination of living. E14/E17: show communication, learning and responsibility. These demonstrate some learning; they do not certify complete anubhav.
Liberation - mukti / bhram-mukti (20)	Freedom from delusion through understood and realised reality, expressed in humane participation. Distinguish particular corrections from complete realisation.	Return across E09, E13, E14 and E17: relationships, actual provision, learning and work. Use the questions of E01 to connect them. A better budget or calm response to loss illustrates too little to bear the entire claim.
Spiritual reality - adhyatma (20; prepared in 4)	The all-pervading reality in relation to which conscious selves are understood; study of jeevan belongs within this wider account of coexistence.	E05: return to people and surroundings, then explain the proposal of pervasiveness within, around and between units. Visible intervals, air and a bounded container are not the full meaning.

Use the same meanings across prose, glossary, figures and notes. The notes can explain fuller classifications, including economic, dharma and state policy; body, mind, wealth and time must not be allocated to exclusive policy compartments without source support.

Example catalogue and development

Use a lightly recurring fictional household, its neighbours and a local repair workshop. The meal and care arrangements connect household life with work, learning and nature. A shared-water arrangement then widens the setting to people who are not relatives or already trusted friends. Characters have different knowledge, capacities and circumstances; agreement and competence develop through participation and correction.

The labels below are stable planning references, not headings to print in the finished book. Each return should deepen understanding, change a responsibility or widen participation. Across the meal, move from receiving nature's contributions to recognising value, assuring provision and examining replenishment. Across care, move from a promise to just arrangements, shared learning and changing capacities. Across the workshop and water provision, move from useful skill to shared competence and responsibility beyond familiar people. These cumulative returns make the title's question concrete. Everyday observations open inquiry; the philosophical explanation supplies meanings and relationships that the scene alone cannot establish. Main chapters are bold; later chapter numbers identify planned returns.

Scene and chapters	Key concepts and purpose	How the scene develops	Limit of the illustration
E01 - A task completed. 1; 7, 20	Continuing happiness (<i>sukh</i>); resolution, prosperity, trust and coexistence. Separate a real achievement from the whole question of fulfilment.	Someone finishes demanding work and enjoys the result. Ask what became easier, what helped make it possible and what still needs attention. Return at the close to what has been learned about sustaining these conditions across the familiar responsibilities.	Achievement need not disappoint. Unsettled feelings do not establish the philosophy, and secure provision cannot be assumed.
E02 - Food and a promise. 2; 8, 11	Body and conscious self (<i>sharir, jeevan</i>): distinct requirements within their joint life.	A meal relieves hunger; a missed promise about shared care still needs acknowledgement and repair. Show bodily support and relational fulfilment working together.	Different needs invite the account of jeevan; they do not prove its distinct or enduring constitution.
E03 - A delayed care visit. 3; 6, 8	Expectation, thought and desire (<i>asha - vichar - ichha</i>), imagination and natural acceptance; both evaluative groups, <i>priya - hita - labha</i> and <i>nyaya - dharma - satya</i> , within the contrast of <i>jeev-chetna</i> and <i>manav-chetna</i> .	Someone delays a promised care visit after an exhausting workday without sending a message. Distinguish what each expects, the considerations compared and the situation imagined or desired. Return to the same choice to ask what directs all three: attraction, bodily advantage and personal gain alone, or understanding of relationship, resolution and reality. Let both people reconsider the situation and arrange help that respects exhaustion and the care commitment. Carry the gain question to the repairer's work in E11 .	Bodily exhaustion still calls for care; humane evaluation does not require ignoring it. Checking a factual assumption prepares inquiry into truth but does not exhaust <i>satya</i> . Do not map the three powers onto the three perspectives one by one.
E04 - Repairing the tap. 3; 10; 16	Action joined with aspiration (<i>karma</i>); choice, competence, effect and responsibility.	Follow the wish to stop a leak through diagnosis, a chosen repair and checking the result. Allow reasonable rest, help or delayed work where circumstances require it.	Responsibility is not immediate compliance. Good intentions do not guarantee results; practical competence does not demonstrate awakening.
E05 - People, things and surroundings. 4; 6, 20	Units, <i>satta</i> and coexistence (<i>ikai, satta, sah-astitva</i>); inseparable presence (<i>samprikta</i>).	Notice two people and objects in a room, then explain the proposal of pervasiveness within, around and between units, extending beyond the room. Return when explaining <i>adhyatma</i> .	Visible gaps, air and room boundaries do not establish all-pervading reality. The scene is an entrance to the philosophical account.

Scene and chapters	Key concepts and purpose	How the scene develops	Limit of the illustration
E06 - A courtyard in use. 5; 18	Four orders; form, qualities, characteristic nature and innateness (<i>rupa, guna, swabhava, dharma</i>); complementarity (<i>purakta</i>).	Observe soil, a plant, an animal and people. Explain what each distinction asks us to understand, then the orders' cumulative dharmas and participation. Include relations that do not serve an immediate human need.	Observation does not by itself establish the classifications, jeevan's constitution or the account of development. Animals and plants are more than useful props.
E07 - Preparing and sharing a meal. 5, 7; 11, 12, 18	Complementarity; value (<i>mulya</i>); nourishment; useful work and cyclical production (<i>avartansheel</i>).	First trace what makes food possible. Then ask what the vessel, nourishment and human care each fulfil. A celebration or thoughtful gift briefly opens the question of continuing happiness and value beyond price. Later examine actual provision, a material return and an unresolved cost in production or waste.	A pleasant meal is not the complete account of jeevan values. Composting one stream does not make the whole system lossless or sustainable.
E08 - A question at a study meeting. 6; 13, 20	<i>Shravan - manan - arth-bodh</i> ; study, experiment/practice, realisation/evidence; <i>sakshatkar, bodh, anubhav, praman</i> ; knowing - believing - recognising - fulfilling; knowledge of existence, jeevan and humane conduct.	A learner can repeat "existence is coexistence" but cannot explain a specific implication. Follow attentive listening and reflection into grasping meaning, then its examination in the care arrangement. Let the learner explain a meaning in their own words, recognise an overlooked responsibility and examine a changed situation. Relate this growing independence to all three contents of knowledge; return to its communication and practical expression in 13 and 20.	Fluency, agreement or a corrected arrangement does not certify complete realisation. Distinguish the scene's demonstrated learning from the fuller source account; do not force all faculties into a scripted sequence.
E09 - Care across changing capacities. 8, 9; 10, 11, 19, 20	Relationship, justice and evaluation (<i>sambandh, nyaya, mulyankan</i>); trust, respect, fidelity, care and continuity.	Partners and a parent fulfil and revise responsibilities. Begin with care and fidelity already being fulfilled, then examine what changing needs require. A child first participates in an ordinary task of household care. A brief separate adoptive-family illustration can make parental responsibilities visible beyond biological connection; preserve the source's distinct relationship purposes. Let a younger person learn a practice of care or fair dealing from the elder, test its meaning and later teach it. Return through changing capacities, bodily loss and what continues.	Care and worth do not depend on productivity or wisdom. The learner's independent conduct shows transmission of understanding between people; it does not prove the elder's re-embodiment.
E10 - Agreeing shared water provision. 10; 15 - 17	Justice, dharma and truth (<i>nyaya - dharma - satya</i>), connected with the earlier <i>priya - hita - labha</i> account; freedom and responsibility; <i>niyam - niyantran - santulan</i> .	Neighbours clarify needs and responsibilities, examine a misleading claim of entitlement, agree provision and review fulfilment. Revisit the same arrangement through all three humane perspectives: relationships fulfilled in behaviour, resolution in thought and understanding of reality guiding both.	A successful schedule does not establish metaphysical truth. The three humane perspectives guide the whole decision; avoid mechanical one-to-one pairings with the earlier triad.
E11 - A repairer's working day. 10; 12, 16	Values, character and ethics (<i>mulya, charitra, niti</i>); rightful wealth (<i>swa-dhana</i>), kindness (<i>daya</i>) and right use (<i>sadupyog</i>).	The repairer explains the actual fault, charges for useful work, pays a helper and supports that helper's learning. Use payment, a freely offered gift and an award to distinguish rightful acquisition; keep an erroneous transfer as a brief boundary case if needed.	Skill and legal ownership alone do not settle right use. Do not reduce rightful wealth to wages or generosity to giving money.

Scene and chapters	Key concepts and purpose	How the scene develops	Limit of the illustration
E12 - Adjusting a day's work and care. 11; 19	Health and restraint (<i>swasthya</i> - <i>sanyam</i>); nourishment and bodily functioning; understanding-guided thought, behaviour and work.	Begin with a person's wish to join a meal, care for someone or contribute to work. A changing bodily requirement leads to adjustments in work, rest, assistance and access to care. Show how people understand the need, revise expectations and fulfil responsibilities together. Connect bodily care and regulated activity to humane participation.	A healthy body alone does not demonstrate <i>sanyam</i> ; illness or disability does not measure human worth. The example supplies no medical regimen.
E13 - Enough for whom, and for how long?. 12; 15, 20	Prosperity (<i>samriddhi</i>); productive labour (<i>shrama</i>), production beyond assessed need, just exchange and cyclical participation; humane wealth-motive (<i>vitteshana</i>) within all three <i>eshanas</i> ; actual provision, reserves and assurance.	Begin with the life that provision should support: care, learning, useful work and contribution. Follow a useful household contribution through exchange, provision for food and a needed tool, and a reserve. Ask how production maintains its natural conditions, preparing Chapter 18. Follow right use into children's learning and shared work, relating <i>vitteshana</i> to <i>putreshana</i> and <i>lokeshana</i> . Return in 20 to the difference between limited fields of humane provision and wider fulfilment of purpose.	Confidence, frugality or skill alone does not provide abundance. Money can serve exchange and reserves; its quantity alone does not establish prosperity. Neither worry nor a large balance defines <i>labhonmad</i> . Wealth, poverty, a donation or a modest lifestyle cannot establish someone's consciousness category.
E14 - Learning with an adult. 9; 13; 16, 20	<i>Shiksha</i> - <i>sanskar</i> ; <i>shravan</i> - <i>manan</i> - <i>arth-bodh</i> ; <i>gyan</i> - <i>vivek</i> - <i>vigyan</i> ; <i>putreshana</i> and humane continuity; <i>shraddha</i> , <i>gaurav</i> , <i>kritagyata</i> .	A child notices advice and conduct diverging. Adult and child learn a practical task, correct an assumption and keep a commitment. Ask what the adult seeks for the child: prestige or capable humane participation. Connect understanding, purpose and practical accomplishment; later let the learner explain the purpose, act responsibly in a changed situation and teach another without the first teacher present.	<i>Putreshana</i> includes progeny and family/social continuity; do not reduce it to status or erase its generational meaning into generic mentoring. Teaching a task or becoming a parent does not certify a category of awakening.
E15 - Making a cup better. 14; 15	Usefulness and aesthetic refinement; skill directed by human purpose.	Compare a cup's ability to hold and serve a drink with a thoughtful improvement in handling, finish or ease of use. Show what it enables for an actual user, including someone with reduced grip. Widen briefly to language and creative expression.	Price, prestige or personal taste alone does not define the source's aesthetic value. One designed object is not a complete theory of art.
E16 - Choosing and using a water pump. 15; 16 - 18	<i>Gyan</i> , <i>vivek</i> , <i>vigyan</i> ; purpose, appropriate means, right use and consequences.	Begin with dependable, accessible water and the activities it would support. Compare two ways of selecting and using a pump through actual need, capacity, maintenance, access, labour and the water source's limits.	The philosophy directs the questions; technical and environmental conclusions require evidence. A pump's power or efficiency alone does not establish right use.
E17 - Keeping the system working. 16; 17, 19, 20	Complementary work, trust, accountable roles and continuity; preparation for <i>lokeshana</i> 's recognition of humane contribution.	The maintenance team divides responsibilities, teaches a newcomer and corrects a missed task. Later the newcomer works responsibly without the teacher present and teaches another, allowing provision to continue through shared competence. Ask whether recognition makes understanding and contribution available to others; widen this question in E18.	Announcing a shared purpose does not resolve every disagreement or resource limit. Independent learning illustrates humane tradition; public credit, leadership or teaching ability alone does not establish <i>dev-manav</i> .

Scene and chapters	Key concepts and purpose	How the scene develops	Limit of the illustration
E18 - Water beyond the neighbourhood. 17; 18, 20	Undivided society and universal orderliness; five paired social functions; lokeshana, beneficence and the wider fulfilment of humane purpose.	Begin with people beyond relatives and familiar neighbours who need the same dependable provision, including those with fewer resources. Explain the five functions and proposed councils; develop how people, resources and recognised understanding can help another group learn and sustain humane arrangements. In 20, use this return to explain dev-manav's lokeshana and divya-manav's eshana-free beneficence.	The project illustrates coordinated responsibilities and prompts comparison of governing motives. Wider reach or a selfless-looking act does not prove attainment or show that local arrangements scale automatically.

Chapter 18 returns principally to **E07**, following actual material conditions, replenishment and limits, with **E06** and **E16 - E18** showing how the same questions extend beyond one meal. Chapter 19 returns principally to **E09** and **E12**: distinguish bodily change, the philosophy's account of continuing jeevan, and the transmission of understanding and care in human tradition. The continuity claim receives its own primary-text explanation.

Chapter 20 uses a short mosaic rather than a new dramatic test. Revisit **E01**'s questions through dependable relationships (**E09**), adequate provision and useful work (**E13, E17**), and learning that can help another understand (**E08, E14**). Return to **E05** for *adhyatma*. Explain *gathan-poornata*, *kriya-poornata* and *acharan-poornata*, together with awakening and freedom from delusion, through the connected philosophical account. These scenes reveal the scope of their expression; neither a balanced budget, a calm response to loss nor the fictional learner's claim certifies attainment.

Chapter plans

The guiding questions below direct chapter writing; they need not appear as repeated headings in the finished book. Each question should govern the selection and order of explanation. The opening scenes are proposed illustrations, not reports of events or examples attributed to Shri A. Nagraj.

Use one lightly recurring, explicitly fictional household and its neighbours as the book's main setting, with room for independent examples. Preparing and sharing a meal connects nature, value, bodily care, provision and ecological responsibility in Chapters 5, 7, 11 - 12 and 18. A promise concerning an elderly parent's care opens inquiry in Chapters 2 - 3; a continuing care arrangement develops justice, family participation and dependable conduct in Chapters 8 - 10. Useful workshop work and a shared water arrangement connect character and right use in Chapter 10 with the pump, maintenance team and wider provision in Chapters 15 - 17. A tap repair, courtyard observation, study meeting, celebration and well-made cup carry other distinctions. Chapters 1 and 20 return to the same person's questions without requiring a neat conversion story. Each return must reveal a new distinction. No constructed scene is evidence by itself for *satta*, the order-specific account of *dharma*, the distinct constitution of *jeevan*, re-embodiment or complete awakening.

1. What Are We Really Looking For?

Guiding question: What kind of continuing fulfilment can human life hold?

Begin with someone in the recurring household who completes a demanding task and enjoys its result. Let the satisfaction open a wider inquiry into what made it possible and what would sustain fulfilment across the rest of life. Explore the wish for continuing happiness, the place of bodily comfort and passing sensory pleasure, the need to understand, and the importance of dependable relationships. Introduce four connected aspirations in ordinary language: clarity within ourselves, assured provision in the family, trust in society, and participation with nature. Give their source terms once, with their meanings, so later chapters can return to a familiar thread. Establish the book's method here: consider the account as a proposal, ask what its words mean, examine its reasoning, and investigate its implications in living. These become questions the rest of the book develops. The reader should leave with a reason to examine human life as a connected whole, including the understanding, relationships and provision on which its fulfilment depends.

Ask, "What has this made easier, and what still needs attention?" The accomplishment can be satisfying while the wider question remains. Introduce our dependence on others through the meal, work and care that make the achievement possible. This gives an early entrance to togetherness before Chapter 4 develops coexistence as an account of reality.

2. The Body and the Conscious Self

Guiding question: How can we understand and fulfil the different needs within one human life?

In the recurring household, contrast feeding a hungry person with repairing a broken promise about care or time. Present Madhyasth Darshan's account of the human being as the joint life of a body and an enduring conscious self, called *jeevan*. Explain their different requirements and their close cooperation in sensing, acting, and living. Bodily requirements such as food, rest, and shelter call for appropriate material provision in assessable quantities; the wish for understanding, trust, and continuing happiness calls for a different kind of fulfilment. Show why additional possessions cannot by themselves repair a relationship or resolve a question. Keep care for the body central, including its changing requirements over a lifetime. Establish the self as a real knower and experiencer within the philosophy; the contrast between hunger and hurt introduces this proposal without serving as proof of its entire account of sentience. Return to the scene with two appropriate responses: meeting bodily need and acknowledging, understanding and fulfilling the care commitment. Actual food, time and dependable help matter alongside the distinction. Develop the technical account of *jeevan*'s constitution only after the reader has met units and the orders of nature.

3. Our Inner Life: Expectation, Thought, and Desire

Guiding question: Can expectations, thoughts and desires find a coherent direction through understanding?

Control the chapter's density through three movements within the care scene: first distinguish expectation, thought and desire; then examine what directs them, bringing the two complete evaluative groups and natural acceptance into the inquiry; finally open the family, resource and recognition questions that later chapters develop. Introduce all three *eshanas* together in a short closing passage with their humane meanings and source names. Their detailed treatment belongs in Chapters 9, 12 and 17, and their comparison across consciousness categories in Chapter 20. Keep the fuller classifications and faculty/activity table in the chapter notes, available for reference without making memorisation a condition of following the story.

Begin with a promised visit to help care for an older relative that is delayed after a demanding workday. The person is exhausted; another family member interprets the delay as indifference. Follow what each expects, considers and imagines. Explain expectation (*asha*), thought (*vichar*) and desire (*ichha*) together: expectation has a basis, which the source distinguishes as body-centred or grounded in realisation; thought

analyses and evaluates; desire includes forming an image of what a situation is or could become. Explain hope as a familiar English entrance to *asha* without reducing it to optimism or expecting favours. Introduce imagination (*kalpanasheelta*) through the ability to consider possibilities, and freedom of action through choosing and acting among them. Return to the complete triad after distinguishing its members. Keep its direction through understanding as the chapter's main question; the evaluative groups and motives introduced below explain what guides this inner activity. Let reconsideration lead to a practicable arrangement of rest, communication and care, so the capacity to understand has a visible consequence. Present their connected roles carefully; ordinary English uses overlap, and the scene does not make them a fixed sequence of mental steps.

Introduce natural acceptance (*sahaj swikriti*) through the source's affirmative account: *jeevan* naturally accepts justice, *dharma* and truth, even before their meanings are fully understood. Explain the familiar entrance through seeking just relationship, a dependable shared life and clarity about what is real. Both people may seek these while holding mistaken assumptions about the other. Distinguish this natural orientation from a present preference or an already-correct judgement. Dialogue, study and evaluation develop understanding; comprehension and realisation establish what is accepted in dependable living. Chapter 6 should return to this relationship between acceptance and knowing. Rest and bodily care have their legitimate place; responsibility includes understanding capacities and arranging dependable help. Equal human worth and the shared capacity to understand remain clear even when abilities and present understanding differ.

Explain the contrast between living primarily by sensory attraction, bodily benefit and gain, and giving sensitivity its direction through understanding and humane fulfilment. Present both whole triplets together: pleasantness, bodily benefit and gain (*priya - hita - labha*); justice, *dharma* and truth (*nyaya - dharma - satya*). Give the first a subsection titled **Pleasantness, Bodily Benefit, and Gain**; introduce the second immediately through justice in behaviour, resolution in thought and truth in understanding, with fuller explanations promised in Chapters 6 - 10. Explain *labha*'s acquisitive meaning through the later repair example, where charging more than the useful contribution is distinguished from rightful remuneration. Apply each whole basis of evaluation to the care decision and show how it can guide expectation, thought and desire together. Neither bodily care nor sensory pleasure is itself the problem, and truthful checking of one claim does not exhaust *satya*'s meaning. Explain *priya* through sensory gratification and *hita* through bodily nourishment and health; emotional defensiveness is not a definition of *priya*, and exhaustion is a condition to understand rather than itself a perspective. Keep the need for rest within the humane arrangement. Natural acceptance opens the possibility of inquiry even when a person's present judgement or motive is mistaken.

Once the contrast is intelligible, introduce *jeev-chetna* and *manav-chetna* as source terms for these orientations of human living. The first term describes a basis of evaluation, not a personal insult or a difference in human worth. Briefly indicate that Chapter 20 will develop the fuller account of awakening; gather the complete *jeev - manav - dev - divya chetna* group in the notes here. In the main explanation, make the limits of bodily preoccupation and unbounded consumption or gain intelligible through their ordinary meanings. Chapter 3 notes should gather the complete *char vishaya* and *teen unmad* groups, with Chapter 12 returning to consumption and gain and clarifying their source meanings. This preserves the connected classifications while allowing the reader to follow the care question first.

Introduce the three humane motives together before leaving the account of orientation: *putreshana*, *vitteshana* and *lokeshana*. Begin with concern for children and continuity, resources and recognition; explain their specific humane direction through family/social participation, just provision for right use, and recognition for an undivided society. Relate the trio to *nyaya - dharma - satya* and to the humane qualities prepared for Chapter 7. Chapters 9, 12 and 17 develop these motives; Chapter 20 compares *manav*, *dev-manav* and *divya-manav* explicitly. Do not describe the four bodily preoccupations as simply three corrupted *eshanas* or imply that all three *eshanas* persist unchanged in every category.

Use the tap repair as a short second example of action: a person wishes to stop waste, investigates the fault, chooses and carries out a repair, then checks the effects and what still needs correction. Ask, "What am I hoping to accomplish? What am I assuming? What conditions and consequences must I understand?" Chapter 3 notes should give the five faculties and their five pairs of activities, ten activities in all: *mun*, tasting and selection; *vriddhi*, deliberation and analysis; *chitta*, contemplation and visualisation; *buddhi*, comprehension and resolve; *atma*, realisation and authenticity. Connect *asha*, *vichar* and *ichha* with *mun*, *vriddhi* and *chitta* respectively, and locate them within the fuller five-power account in the planned note inventory. Explain the source's four-and-a-half activity account in those notes and return to its contrast with awakened activity in Chapter 20. Neither scene demonstrates the whole constitution or complete realisation of *jeevan*.

4. Existence Is Coexistence

Guiding question: What reality do we belong to, and how can we understand it?

The choices described in Chapter 3 raise the question of what the person and the surrounding world belong to. This chapter explains the reality within which the philosophy locates the human possibility of understanding and fulfilment. Observe a familiar thing in its surroundings, then introduce the book's central account of reality. Explain distinct, active things and beings existing inseparably in an all-pervading, unchanging reality, called *satta*. Explain in simple words what it means for that reality to be present within, around, and between units. Develop the connected account of units as energised, organised in themselves, and participating in a larger order. Preserve both the reality of distinct units and their inseparability from the pervasive ground. Everyday relationships provide an entrance to the idea; this chapter gives coexistence its full philosophical meaning beyond social cooperation or ecological dependence. Explain the philosophy's own meanings of space and energy before drawing any connection to familiar scientific uses of those words.

Begin with two people sitting together and widen attention to objects in the room and the space around them. Make the ontological distinction immediately: *satta* is present within the material of the chair and the person's body as well as around and between units. Its pervasiveness extends through insentient and conscious nature; it is not limited to the volume left between things. The language of being submerged, soaked and surrounded describes inseparable presence, rather than another material substance filling pores or an optically visible property. Return to a stone, a body and the air to distinguish bounded units and material media from the proposed all-pervading reality. The room illustrates distinctness and togetherness; it cannot by itself establish the claimed unchanging reality. Introduce *sampriktata* after explaining this inseparable presence. Develop the source's connected account of regulation, activeness and forcefulness. Chapter 4 notes should give the submerged, soaked and surrounded terminology with its precise relations: submersion with activeness, soakedness with forcefulness, and surroundedness with regulation. These are inseparable aspects of the philosophical account, not three successive physical operations or literal immersion in a liquid.

Explain the name Madhyasth Darshan briefly through understanding and realisation of coexistence, and the place of mediation in sustaining order. Prepare the generative, degenerative and mediative distinctions in Chapter 5 rather than making *madhyasth* a synonym for compromise between opinions. Introduce *niyam*, law or order in activity, as the start of a thread developed through regulation and balance in the next chapter.

5. Our Place in Nature

Guiding question: What becomes possible when human participation is guided by understanding?

Begin in a courtyard with soil and stones, a growing plant, an animal seeking to live and a person seeking happiness. Introduce the four orders and their cumulative innateness through these familiar things and beings. Then follow a shared meal from soil, salt and water through grains and vegetables, animal participation and human work. Ask, "What has made this meal possible, and what do we return?" Explain complementarity through soil supporting plants and plant matter returning to soil. Receiving and contributing belong together; the examples should allow for death, predation and changing conditions.

Examine four connected questions about the things and beings in the courtyard: their form; their effects in relationship; their characteristic functioning or contribution; and what they inseparably bear in their order. Introduce *rupa*, *guna*, *swabhava* and *dharma* after explaining these distinctions. Form includes shape, volume and density. Effects in relationship include generative, degenerative and mediative activity. Characteristic functioning differs across the orders; innateness concerns what a unit inseparably bears. Follow more than one question through the same unit rather than assigning each aspect to a different object. Observation, comparison and explanation contribute together to understanding; do not divide these aspects into two unrelated sensory and intellectual worlds. Chapter 5 notes should provide the complete four-aspect map across the orders with primary-text definitions.

Develop *dharma* cumulatively: material units exist, living composition adds growth, animal life adds the hope to live, and human life has happiness as its further *dharma*. An aspiration for happiness does not mean a person already feels happy. Keep innateness distinct from the characteristic activities and contributions of each order. Explain law, regulation and balance together as lawful activity and mutual relationships through which order is sustained. Human imagination and freedom of action make understanding necessary for responsible participation. Name material and conscious nature, *jada* and *chaitanya*, after their meanings are established; animal and human life both involve material bodies and *jeevan*.

Give development a short, connected explanation in the main text. The philosophy describes *vikas-kram*, development towards constitutional completeness, and *vikas*, that completeness in *jeevan*: an atom whose constitution no longer gains or loses constituent particles. Changing molecules and bodily formations belong to a distinct account of material composition. Animal and human life involve body and *jeevan* together. *Jagriti-kram* and *jagriti* concern movement towards awakening and awakened understanding in *jeevan*; the human possibility is to understand and live accordingly. Introduce constitutional completeness, completeness of conscious activity, and completeness in conduct here in ordinary English, returning to them in Chapter 20. Keep technical atom terminology in the notes after giving the claim its meaning; do not turn this into a modern evolutionary timeline or a tale of an individual self inevitably ascending through species.

Return to the courtyard and meal with the distinctive human possibility in view: understanding what we receive and consciously fulfilling our participation. The account of constitutional completeness and awakening explains why this question concerns understanding as well as material provision. End with the human question: "We can imagine many ways to live; how can we know which fulfil our relationships?" Chapter 6 develops inquiry, Chapter 19 revisits the continuity of *jeevan*, and Chapter 18 gives complementarity a practical expression in provision and care for the Earth.

6. From Assumption to Understanding

Guiding question: How does something we can repeat become something we understand and live?

Begin at a study meeting where a learner can repeat "existence is coexistence" but asks what it means for the self, nature and relationships. Give the meeting a question that cannot be settled by repeating the teacher's words: participants believe an arrangement of care is fair until they learn about one person's hidden work and exhaustion. Let them examine their assumptions, understand the situation more fully, and revise the arrangement. Relate this learning to the proposals of Chapters 4 and 5, including the shared meal's dependence on soil, water, plants, work and conscious care. Distinguish legal ownership, price and prestige from the nature, usefulness and relationships of things and people. Test accepted beliefs (*manyata*) against reality; beliefs that differ from reality constitute delusion (*bhram*). Introduce truth (*satya*) through reality as coexistence.

Use a subsection titled **Knowing, Believing, Recognising, and Fulfilling** to explain the complete fourfold account. Belief can rest on assumption; understanding gives it a different basis and guides recognition and fulfilment in living. Follow that connection through the same care arrangement, then return to all four terms together. The source account also describes recognition and fulfilment throughout nature as lawful relatedness; distinguish this from human knowing and deliberation. Bring together the three contents of knowledge: existence as coexistence, the conscious self, and humane conduct. Name *astitva-darshan-gyan*, *jeevan-gyan* and *manaviyata-poorna-acharan-gyan* once their meanings are clear; Chapters 13 and 15 return to their relation with purpose and practical accomplishment. Chapter 6 notes should provide the fourfold distinction and knowledge triad with their source passages.

Explain listening, reflection and grasping meaning as the connected *shravan - manan - arth-bodh* account. Give the learner an explanation to hear, think through and make intelligible in their own words. Then present the source's stated learning direction: study (*adhyayan*), experiment and practice (*prayog aur abhyas*), and realisation with evidence (*anubhav aur praman*). Show why inquiry calls for examination and fulfilment in living. This is a supported direction of learning; the separate faculty mapping of *manan*, *tulan*, *sakshatkar* and *bodh* does not make every encounter a compulsory series of four mental steps.

Preserve direct recognition (*sakshatkar*), comprehension (*bodh*), realisation (*anubhav*) and evidence (*praman*) as distinct meanings within this account. Explain the faculty correspondences in the note and realisation of coexistence in the conscious self positively, including continuity and authenticity in living. If "seeing" is used, explain it through the source's meaning rather than sensory perception. Return to what the learners can now explain, communicate and fulfil. Let one learner identify an overlooked responsibility without prompting and explain what would need reconsideration if someone's capacity or availability changed. This makes growing independence in understanding visible. Their corrected care arrangement evidences some learning; it does not by itself exemplify complete realisation. Ask about clarity within oneself, fulfilment in relationships and responsible participation with nature. Relate these questions to evidence through realisation, behaviour and experiment, showing why understanding and its expression in living belong together. Reconnect truth with the *nyaya - dharma - satya* group introduced in Chapter 3, preparing the justice and dharma discussions in Chapters 7 - 10.

7. What Makes Life Valuable?

Guiding question: What constitutes fulfilment within ourselves, between people and through useful things?

Begin with the recurring household preparing and sharing a meal. Grain and vessels fulfil material purposes, while understanding needs, cooperating and making dependable provision express care between people. Ask what is valuable in each contribution and what kind of fulfilment it makes possible. Return to the human *dharma* named in Chapter 5: continuing happiness is fulfilled through understanding and resolution, not secured by a passing pleasant feeling or by possession alone. Distinguish usefulness and aesthetic refinement in things, fulfilment in relationships, humane qualities, and happiness, peace, contentment and bliss within *jeevan*. Follow one contribution through these questions before introducing the value families. The four *jeevan* values need their connected meanings; they should not become four interchangeable names for feeling good.

Use **Happiness, Peace, Contentment, and Bliss** as a subsection title and give *sukh - shanti - santosh - anand* together after explaining their meanings. Develop humane qualities through action: remaining steadfast in justice, making it possible through one's abilities, and devoting resources to another's development. Introduce *dhirata - virata - udarata* together after these meanings. Prepare the distinctions among *daya - kripa - karuna* by asking what help a learner needs: access to what is to be understood, development of receptivity, or help with both. Reunite the six qualities before Chapters 10 and 13 develop this teaching relationship further. Turn to a family celebration to ask how happiness might continue beyond the occasion; a thoughtfully chosen gift can express care without its price measuring fulfilment of the relationship.

Chapter 7 notes should give the complete thirty-value enumeration: four *jeevan* values, six humane qualities, nine established relationship values, nine expressed relationship values and two object values. Preserve repeated terms in their distinct defined positions. Explain the six humane qualities with their source meanings; refer to Chapter 8 notes for the nine checked relationship-value pairs and Chapter 14 for usefulness and aesthetic refinement. The notes organise distinctions the main text has made intelligible rather than supplying a list readers must memorise first.

8. Trust, Respect, and Justice

Guiding question: What makes dependable and mutually fulfilling relationships possible?

Begin with two partners and an elderly parent whose shared life already includes dependable care and trust. As needs change, they arrange care together. Recognise their relationships, discuss needs, consent, available resources and capacities, carry out the shared responsibilities and evaluate whether care, dependability and everyone's dignity have been fulfilled. In this example, the parent takes part in decisions and contributes life perspective and guidance as their present capacities allow. Their worth and the care they need do not depend on how much they can contribute. Include an arrangement that needs correction when one person's contribution or exhaustion has been overlooked. Mutual satisfaction must include the people giving care as well as the person receiving it.

Explain trust, respect, affection, care, guidance, gratitude and love through recognisable relationships. Explain *shraddha* through movement towards awakening, authenticity and complete conduct, and *gaurav* through willingly emulating excellence. Acknowledging help received belongs to gratitude and remains a distinct meaning. Distinguish these values from unquestioning assent and social prestige. Connect established relationship values (*sthapit mulya*) with their appropriate expressions (*shisht mulya*): for example, respect expressed through cordial participation, and trust expressed through cooperation and complementarity. A claimed inner feeling needs its fulfilment in conduct; a polished manner alone does not

establish the value. Chapter 8 notes should give all nine established values and their checked expressed-value pairs, with source-defined English meanings and a reference back to Chapter 7's thirty-value inventory.

Develop justice as a complete activity: recognising the relationship, fulfilling its values, examining the fulfilment, and arriving at mutual satisfaction. Distinguish the wish for happiness, a person's stated intention in a particular situation, practical competence and actual fulfilment. Explain respect through right evaluation of the person and relationship, including over-evaluation, under-evaluation and mis-evaluation. Show how dialogue and evaluation identify what needs correction. Shared human potential supports learning and repair; assessment of actual conduct also guides responsibility, protection and the rebuilding of dependable trust.

A secondary example of a missed promise can expose a familiar asymmetry: "I meant well" may be one's own defence while "You let me down" is one's judgement of another. Examine both intention and fulfilment for both people. Wanting happiness does not establish that every particular intention is harmless or every person presently dependable; show trust growing through understanding, repair and reliable action.

9. Family: Our First Place of Shared Living

Guiding question: How can humane living become something another generation learns and continues?

Begin with a child participating in an ordinary household task, such as preparing a place at the shared meal or helping with a care routine. Let the child ask why the task matters and take increasing responsibility as understanding and ability develop. Then develop *putreshana* through the child's place in the continuing family and wider society. Explain progeny and lineage together with the development of people capable of just relationships, useful work and shared order. Contrast preparing a child for such participation with making the child an instrument of status, possession or parental security. Recall *vitteshana* and *lokeshana* alongside it: provision supports care and learning, while dependable participation gains recognition for its humane purpose. The chapter develops one motive while keeping the trio visible.

Widen the household's continuing care arrangement to include work, money, learning, partnership and the recognition of each person's contribution. Explain how relationships provide continuing opportunities to learn and practise justice. Differences of age, capacity and health affect responsibilities and fulfilment without determining human worth. Follow the family's responsibilities outward into teaching, friendship, shared work and community, so family becomes the beginning of wider human belonging.

Introduce the seven recognised relationships through their purposes: parents and children (*mata-pita/putra-putri*); husband and wife (*pati-patni*); teacher and learner (*guru-shishya*); siblings (*bhai-bahin*); responsible participants and associates in shared work (*sathi-sahyogi*); participation in orderliness and wider orderliness (*vyavastha* and *samagra-vyavastha*); and friends (*mitra*). Show complementary responsibilities rather than merely assigning names to people in one household. Siblings include brothers with brothers and sisters with sisters, and the source also recognises accepted sibling-like relationships; this is more specific than labelling all peers siblings. The working relationship needs accountability and reciprocal responsibility; the societal relationship connects participation with shared human purposes. Chapter 9 notes should give the complete map, purposes and source terminology, including the related *swami/sevak* formulation where required by the cited passage. Explain *sambandh* through definite expectations towards completeness and *sampark* through voluntary expectations. A shared purpose or long duration alone does not establish this distinction. Use MVD pp. 61 - 62 and 235 - 236 for these meanings, and pp. 344 - 345 for sibling-like acceptance.

Make these purposes visible across different household circumstances. A biological connection, title or formal designation does not by itself fulfil a relationship; its responsibilities call for recognition and dependable conduct. Failure to fulfil a responsibility does not make it disappear. Include a brief, clearly separate adoptive-family illustration of continuing parental care, protection and education. This is an application of

the source account, whose treatment also retains birth and lineage; parenthood must not become a synonym for every act of helping a child. Teacher - learner scenes should develop understanding and the shared aim of awakening beyond the transfer of a skill. Friendship should include participation in resolution and prosperity, dependable help and just behaviour. Chapter 9 notes should support these distinctions with MVD pp. 244 - 254, 341 and 344 - 345.

10. Freedom, Responsibility, and Character

Guiding question: What makes our freedom dependable in practice?

Use two principal subsections, **Justice, Resolution, and Truth** and **Values, Character, and Ethics**, to give the connected groups visible places in the chapter. Under the first, recall *nyaya - dharma - satya* as a whole before drawing together the understanding developed in Chapters 6 - 8. Under the second, relate *mulya - charitra - niti* through the same work and care responsibilities. A short closing return should show how both groups guide expectation, thought and desire in living.

Begin with a small workshop whose members undertake useful repairs while fulfilling family responsibilities. Neighbours ask for help with dependable water provision. Follow a repairer's truthful diagnosis, competent work and fair payment, including the choice to repair a small fault when selling a replacement would yield more income. Ask how thought and resolve support orderliness and how conduct fulfils relationships. Explain the perspectives of pleasantness (*priya*), bodily benefit (*hita*) and gain (*labha*) in relation to justice (*nyaya*), human fulfilment and orderliness (*dharma*), and truth (*satya*). Justice in behaviour, resolution and orderliness in thought, and truth in realisation guide the whole decision; do not draw one-to-one arrows from pleasure to justice, health to dharma, and profit to truth. Explain prosperity through just provision, keeping it distinct from gain at another's expense. Develop *dharma - adharma* as a perspective for evaluating thought and resolve, while preserving Chapter 5's meaning of inseparable innateness.

Give humane character (*manaviya charitra*) its definite meanings through continuing responsibilities. Useful work and just remuneration anchor rightful livelihood. Briefly include a freely given gift and an award as other supported modes of rightful receipt (*swa-dhana*), and use the mistaken transfer as a boundary case showing why receipt alone does not settle entitlement. Explain the conditions and obligations of a payment; its label does not make it rightful. Show marital fidelity (*swa-nari/swa-purusha*) through mutual trust, shared care and dependable commitment, with refusal of secret involvement as a secondary boundary case. Develop kindness (*daya*) through an experienced colleague helping a learner acquire understanding, competence and responsibility without obstructing that development. Refer to Chapter 7's fuller distinctions among kinds of help. Chapter 10 notes should give the source definitions of wealth, fidelity and kindness together with their place in character.

Introduce ethics (*niti*) through protection and right use of body, mind and wealth within these same situations. The workshop pays what is due for completed work before spending on publicity; physical strength helps with a neighbour's move or a shared repair; knowledge and skill fulfil a real need through honest diagnosis and teaching. Explain what makes the use right: understood human needs and relationship values are fulfilled, with resolution, prosperity, trust and coexistence as connected purposes. Examine actual fulfilment instead of inferring right use from intention, efficiency or resource preservation alone. Mind includes the understanding and outlook guiding expertise.

Follow the repairer's conduct over more than one decision: honest diagnosis, competent work, fulfilment of payment obligations and patient teaching. Develop freedom through agreement among thought, speech and action, responsibility for consequences, and the capacity to acknowledge error, repair harm and improve competence. Return to the tap repair when explaining *karma* through activity joined with aspiration: who acts, for what purpose, and with what effects and consequences. Distinguish the source account of freedom in deluded and awakened living without suggesting that a person chooses every physical outcome. Carry the

shared water question forward to Chapters 15 - 17, where tools, organisation and wider institutions give these responsibilities further form.

11. Caring for the Body

Guiding question: How can bodily care support meaningful participation across changing capacities?

Begin with what a person wishes to participate in: a shared meal, caring for another or useful work. Follow an ordinary day in the recurring household as a changing bodily requirement calls for an adjustment in nourishment, activity, rest, work or assistance. Show how accessible support and revised responsibilities make meaningful participation possible. Explain *swasthya* through the body's assimilation and expression of the elements it requires. Explain *sanyam* through regulated activity, and *sanyamata* through humane thought, behaviour and work: the whole *priya - hita - labha* group receives its direction within *nyaya - dharma - satya*. Bring these together as *swasthya - sanyam*, bodily capability and *jeevan's* understanding finding expression in human participation. Nourishment, protection and right use of the body give this account an everyday setting; bodily care alone does not exhaust *sanyam*. Show people revising expectations and responsibilities as well as the care routine. Widen the account to family support, accessible provision and meaningful participation with changing capacities. The source gives a philosophical account, not a medical regimen or a guarantee that understanding prevents illness. Bodily vulnerability and disability belong within care; health does not measure a person's worth or establish their degree of understanding.

12. Work, Wealth, and Having Enough

Guiding question: What would assured provision make possible for a family and its wider contribution?

Begin with the household considering what assured provision would enable: dependable care, time and means for learning, useful work and contribution beyond the family. Ask "Enough for what?" before comparing ways of acquiring resources. Name *vitteshana* as part of the complete *putreshana - vitteshana - lokeshana* group introduced in Chapter 3. The wish for resources becomes humane through justice and right use. Distinguish this motive from prosperity, which includes actual provision and assurance, and from *labhonmad*, the unbounded pursuit of gain. Follow the same household's provision into children's learning and contribution to shared work; this reconnects resources with the other two motives. Chapter 20 will distinguish this humane direction from *dev-manav's* use of people and resources in the wider establishment of humane tradition.

Return to the shared meal as the family asks what it actually needs and how those needs can be reliably met. Explain prosperity through understanding material needs and their limits, useful productive labour, provision beyond those needs, and the assurance that there is enough. Make *shrama*, productive effort, explicit: trace the meal, tool and clothing to people's work and the material resources it uses. Production beyond assessed need makes provision for dependants, reserves and sharing intelligible. Different people contribute different work; the account does not require every household to produce everything it uses. Contrast this with accumulation that has no considered account of need. Include the material means for participation in society as well as food and shelter. Connect meaningful labour, skill, honest exchange, sharing, and responsible reserves. Explain generosity as an expression of assured provision, while recognising the responsibilities that reserves serve and the material conditions that make sharing possible. Follow the goods back to the people and natural processes that make them possible. Keep both actual provision and the understanding of sufficiency in view.

Money and savings can participate in exchange and reserves, but their amount alone does not establish prosperity. Connect production beyond need with cyclical participation: labour applies human skill to natural resources, while cyclical production maintains the natural conditions and complementary processes on which continued provision depends. MVD pp. 265 - 267 connects these purposes with economic security and access to productive means. Prepare Chapter 18 by following soil, water, materials, maintenance and replenishment.

Production of a surplus alone does not establish natural balance, just exchange or prosperity for everyone. Explain these connected conditions in prose rather than presenting an author-made equation as Nagraj's definition.

Use a household decision about food, tools or reserves to ask, "Enough for what, for whom, and for how long?" Assessed need, skill, access to resources, reliable provision and assurance belong in the explanation as connected conditions. Include dependants, repairs, uncertain income and the responsibilities served by reserves. Return to Chapter 3's account of unbounded consumption and gain by asking what could bring the pursuit of more to fulfilment. Keep provision for real needs central while examining assumptions behind status comparison and accumulation. Avoid an equation suggesting that confidence or skill alone guarantees abundance. Extend the ordinary household decision with a case in which a larger balance still leaves needs unexamined and the pursuit of more unbounded. Evaluate actual provision and the governing pursuit separately. Worry, wealth or comparison alone does not establish *labhonmad*, whose definition concerns compulsive gain and exploitation treated as success. If *daridrata* is used, explain its wider source meanings, including actual deficiencies in provision and understanding; do not redefine material deprivation as merely a feeling. Chapter 12 notes should connect JV printed pp. 127 - 128, MVD p. 342 and JVD PDF pp. 139 - 140, 274 - 277 with the Paribhasha Samhita definitions listed below.

13. Education for a Whole Life

Guiding question: How can understanding become another person's own capacity to live and teach?

Include a subsection titled **Knowledge, Wisdom, and Science**. Give *gyan - vivek - vigyan* together and examine one shared task through understanding reality, recognising humane purpose and knowing how to accomplish it. Recall *shravan - manan - arth-bodh* when explaining how the learner studies, and *shiksha - sanskar* when relating learning to formed dispositions. Keep these complete groups distinct while showing how they cooperate in education.

Begin with a child noticing a difference between an adult's advice and conduct. Continue through the adult acknowledging the contradiction, learning what was missing and changing practice; let the child also see how correction becomes dependable. Explain education as developing understanding, the disposition to live by it, and the skills needed for participation. Return to Chapter 6's knowledge of oneself, existence and humane conduct, and connect it with wisdom about purpose and right use and with science and practical skill. Use learning to maintain a useful household object as a concrete choice: doing the task well, understanding whom it serves, and teaching it patiently have related but distinct requirements. Introduce *shiksha-sanskar* through formation in understanding and conduct, developed through study, practice in behaviour and practice in work. The source uses *sanskar* positively for understanding and movement towards completeness, and also distinguishes *su-sanskar* from *ku-sanskar* in its broader developmental account; explain both uses in the notes. Show how home, school, work and community shape one another. Let the learner later explain why the work matters, adapt responsibly to a changed situation and teach another without the original teacher present. Give this return enough space to show how understanding becomes the learner's own capacity. Its expression in conduct demonstrates particular learning; it does not certify complete awakening. Give adult and reciprocal learning equal attention, then carry these distinct personal and intergenerational processes into Chapters 16, 19 and 20.

14. Beauty in What We Make and How We Live

Guiding question: How does understanding find expression in useful, thoughtful and beautiful making?

Begin with a cup used in the household's shared meal. Examine how well it holds and serves a drink, how different people handle it, and how its shape, finish and making refine that fulfilment. Explain usefulness (*upayogita*) and aesthetic refinement (*kala*) through actual use, ease, convenience and beauty. Compare a change that improves fulfilment with extra decoration that does not; consider durability, cleaning, material use and the needs of someone with reduced grip. Return to that person using the cup so the benefit of thoughtful making is concrete. Extend the discussion to thoughtful making, language and creative expression that help people understand and participate. Keep the chapter grounded in the source account of usefulness, aesthetic refinement and meaningful expression; these design examples are applications rather than an exhaustive theory of every art form. Chapter 14 notes should connect these two object values with Chapter 7's complete inventory.

15. Science and Technology with a Human Purpose

Guiding question: How can technical capability serve clearly understood human purposes?

Begin with the neighbours' purpose: dependable, accessible water and the care, work and learning it would support. Return to their shared water question as they consider a pump as one means of fulfilling that purpose. Ask what need it serves, how it works, who can obtain water, what energy and other resources it requires, and what its use changes for people and the source of supply. Compare two possible uses of the same equipment: one chosen for maximum output and another planned around assessed requirements, access, maintenance and the conditions of replenishment. Evaluate their actual effects instead of assuming that the second intention guarantees a sound outcome. Include repair skills, spare parts, shared costs, accessibility and the time made available for other activities.

Return explicitly to *gyan*, *vivek*, *vigyan*: understanding reality and humane conduct, discerning purpose and right use, and knowing how to accomplish worthwhile ends. Show their connection through this decision, then widen to other homes, workplaces and communities. The pump is an application of the account of purpose, work, usefulness and responsibility; claims about its efficiency, extraction limits, water quality or environmental effects need evidence about the actual technology and setting. End with the practical question of who will maintain the provision, preparing Chapter 16.

16. Working Together with a Shared Purpose

Guiding question: What becomes possible when competence and responsibility are shared?

Follow the team maintaining the shared water provision. Its members have useful skills but disagree about speed, cost, reliability and access. Work through a concrete breakdown: who diagnoses it, who decides on expenditure, who communicates an interruption, and how people needing water are served while repair continues. Develop shared purpose, complementary abilities, competence, trust, clear responsibilities and fair exchange through these decisions. Let evaluation reveal a missing skill or an unfairly concentrated burden, then show how the team corrects the arrangement.

Explain how an organisation supports the growth of its members while fulfilling a real need. Connect self-governance with shared understanding, accountable roles and ways to address disagreement. Return to Chapter 13's learning through acknowledgment and correction when an experienced member teaches a newcomer; let a later scene show the newcomer carrying responsibility and teaching another while the experienced member is absent. Continuity becomes possible through shared competence, access to necessary tools and resources, and dependable communication. People retain agency and responsibility. Agreement alone does not establish a right purpose; dependable provision and the fulfilment of relationships supply questions by which the work is evaluated.

17. An Undivided Human Society

Guiding question: How can humane belonging and dependable provision extend beyond familiar people?

Begin with a shared need reaching beyond relatives and familiar neighbours, including people with fewer resources. Widen the shared water question beyond the recurring neighbourhood. Several communities depend on the same source, have different capacities, and need continuity when equipment fails or conditions change. Ask what a competent local team can arrange and what requires wider coordination, shared provision and accountable decisions. Move from this question to how human beings can belong to one society while maintaining different languages, cultures and local ways of living. Explain shared human identity and the practical arrangements that support it.

Develop lokeshana through recognition that helps humane participation become effective and widely understood. Return to all three eshanas: capable people, rightfully available resources and recognised humane contribution belong together in shared living. Extend the water-maintenance and teaching scenes to ask how a successful arrangement can be understood, sustained and taken up by others. Prepare dev-manav's lokeshana as the wider establishment of humane tradition, with recognition understood through acceptance and emulation of awakening. Keep praise, publicity and organisational size distinct from that source-defined purpose.

Introduce five coordinated social functions in the source order, preserving their paired purposes: education and the formation of dispositions for humane living; justice and protection; production and work; exchange and reserves; and health and restraint. Follow the water case through learning, just access, useful equipment and maintenance, exchange and reserves, and health with responsible participation. This makes their coordination intelligible without making water provision their entire scope. Name undivided society (*akhand samaj*) and universal orderliness (*sarvabhaum vyavastha*) after explaining the connected purpose. Introduce the ten-level proposal from family to world-family councils, using the complete enumeration in the source decisions below. The ten levels describe the reach of participation; the five functions recur across those levels. Explain representation by people recognised for understanding and fulfilled responsibilities, with communication, evaluation and support moving between local and wider councils. Keep mukhya-rajya and pradhan-rajya distinct. Chapter notes preserve the representative pattern, locally determined committee sizes and the world-council composition exception. The example illustrates the proposed responsibilities without claiming that a council chart guarantees humane understanding or that one project demonstrates universal implementation.

18. Living Responsibly with the Earth

Guiding question: How can our participation maintain the natural conditions that support life?

Return to the shared meal from Chapter 5 and trace its effects through land, water, energy, tools, transport, and waste. Explain appropriate use, replenishment, protection, and the human responsibility to contribute to the natural relationships that sustain us. Connect production with the cycles through which soil, water, vegetation, and other material resources are renewed or transformed. Consider households, farms, businesses, and communities as different places of participation. Develop ways to ask whether an activity preserves the conditions on which it depends. Link ecological responsibility with production and shared provision, giving the earlier account of nature a practical expression. End by distinguishing the continuity of material conditions and of ways of living passed between people from the further question of *jeevan*'s continuity in Chapter 19.

Introduce cyclical production (*avartansheel*) through a practical question about returning nutrients, repairing tools or renewing resources. Follow actual inputs, outputs, limits and effects. Show which production or use decisions would have to change, who could make those changes and what would still need measurement or provision. This return to the meal should reveal a deeper understanding of its conditions,

with replenishment assessed through actual consequences. Return briefly to the shared water source, pump and wider provision from Chapters 15 - 17 to examine the same questions at a larger scale. The aim of replenishing participation does not establish that every production system can be lossless or that all waste disappears. Return to law, regulation and balance by asking what conditions responsible use must understand and maintain.

19. Life, Death, and What Continues

Guiding question: What continues, and what significance does understanding have within that account?

Begin with care and learning across generations, including something the younger person can now understand and teach independently. Return to the elder's changing capacities and the household's experience of ageing and loss. Distinguish the body's changing composition and lineage, the enduring individual *jeevan*, and understanding made available between different people through education and conduct. Present the philosophy's affirmation that *jeevan* continues after bodily death and can associate with another body. Explain *sanskar* as formation in understanding and conduct belonging to *jeevan*, refined through study, practice in relationships and useful work. Connect its enduring significance with the explicit account of awakened *jeevan* retaining awakening after bodily death; the sources do not establish intact transfer of every autobiographical memory, learned skill or ordinary habit. Return to the learner who understood, tested and passed on the elder's teaching: this is another person's own learning and conduct, distinct from the elder's individual continuity. Another bodily journey does not itself produce awakening; present learning and an enabling tradition remain central. Explain *kaivalya* first through realised understanding, comprehensive resolution and its expression in participation, communication and humane tradition. The body provides the present means for learning and expressing this understanding in shared life. Then include the further account that bodily journeys are no longer necessary in *kaivalya*, while awakened *jeevan* remains active. AVD PDF pp. 260 - 262 connects these points; place the continuity qualification within that affirmative account rather than making bodily absence the definition or goal of fulfilment. Briefly explain time through the duration of activity where helpful. Treat bodily loss and grief with care. Neither consolation nor emotional composure establishes individual continuity or attainment. Then carry the question of fulfilled understanding into Chapter 20. These scenes make the distinctions accessible; the continuity claims receive their own primary-text explanation.

20. Awakening in Everyday Life

Guiding question: What does fulfilment of the human possibility mean throughout living?

Open with a brief return to the familiar questions of care, provision, learning and participation, and ask what their complete fulfilment would mean. Distinguish three things throughout the chapter: the philosophy's account of completed awakening, the reader's developing understanding, and the particular changes the fictional scenes actually show. Include a substantive comparison titled **What Gives Our Motives Their Direction?**, using the three-motives section of this plan. Recall the complete *eshana* trio, then explain the asymmetrical source account: bodily preoccupations in *jeev-chetna*; all three humane *eshanas* in *manav*; *lokeshana* with beneficence in *dev-manav*; coexistence and *eshana*-free beneficence in *divya-manav*. Compare perspective, governing propensity and characteristic conduct together through the recurring family, resource and learning questions. Humane *manav* already has realisation-based understanding; the further question concerns its expression and fulfilment of purpose, not acquiring progressively more of the ten activities. The comparison must appear in the main chapter, with terminology and textual nuances in the notes.

Return to the person and questions of Chapter 1 through the situations the reader now knows: a care arrangement needs revision, the workshop must fulfil its commitments, the household considers provision, a learner asks for help, and neighbours share responsibility for water and its source. Include bodily change and loss from Chapter 19 without making composure or distress a test of a person's attainment. Ask what has

become clearer about self, existence and humane conduct, and how that understanding changes participation. Bring together human *dharma* as happiness, its fulfilment through resolution and orderliness, and the question of whether thought and conduct support that fulfilment. Explain spiritual fulfilment positively as realised understanding of oneself within coexistence, made evident throughout living.

Give the three completions their names once the reader understands their meanings: *gathan-poornata* is the constitutional completeness already present in *jeevan*; *kriya-poornata* concerns the completeness of its conscious activities; *acharan-poornata* concerns completeness in conduct. Living in society is the setting for that expression, not its definition or an automatic guarantee. Return to Chapter 3's contrast between sensory-led and understanding-led activity and explain the source's coordinated ten activities in awakened living. Develop *dev* and *divya chetna* through the comparison of motives and their governing perspectives, including MVD p. 304 on the limited fields in which putreshana and vitteshana can express a humane person's comprehensive understanding. Chapter 20 notes should state their source-specific meanings alongside *manav-chetna*; do not invent a ladder in which all ten activities first appear only at the divine level. Refer back to Chapter 3's complete faculty table instead of presenting a second incompatible map.

Explain *mukti* or *bhram-mukti* as freedom from delusion, with *anubhav* as realisation and evidence extending beyond a moment of insight. Correcting assumptions behind endless accumulation is one meaningful change, developed in Chapter 12, within the larger transformation of understanding and living. Keep real needs and difficult material conditions visible. Return to the two people, room and wider surroundings of Chapter 4 when introducing *adhyatma* as the all-pervading reality; explain the self's realised relation to it with pervasiveness within, around and between units. Explain *eshana-mukti* as freedom from the *eshana* trio as governing motives, while expectation, thought, desire and active participation continue. Define liberation through freedom from delusion. Preserve Chapter 19's further *kaivalya* qualification: completed awakening can remove the need for further embodiment, while awakened activity continues. This is not an instruction to withdraw from present living. The linked scenes make these meanings accessible without certifying complete realisation in the fictional household.

Bring together study, dialogue, reflection, practice and the ability to help another understand. Return to Chapter 13's adult and child and Chapter 16's newcomer to explain how understanding becomes available through education, example and continuing humane tradition. Present Nagraj's account of discovery briefly where helpful; the reader's route is inquiry and practice in life. End by returning to resolution, prosperity, trust and coexistence through familiar responsibilities now understood as connected opportunities for learning and participation. Developing clarity and complete realisation remain distinguishable while the reader can see how to begin.

Return also to Babaji's wish on the opening page: that all human beings live as *dev-manav*. Connect this explicitly with the title, *The Human Possibility*: the wish states the actual possibility and purpose to which he devoted his endeavour. Use the chapter's account of *dev-manav*, especially beneficence and the nurturing of awakened human tradition, to make the wish's meaning concrete. Connect his making understanding available to others with the reader's opportunity to study, realise and live it.

Writing approach

Use the connected-group map alongside the concept-coverage map and example catalogue. For each principal explanation, the writer should be able to identify the complete group, state what relates its members, show that relationship through one scene, and explain what a later chapter develops. Let a short recap or small table gather the group after its members have been explained. The glossary should cross-reference the group and its main chapter, so finding *asha* also leads to *vichar* and *ichha*, and finding *nyaya* also leads to *dharma* and *satya* in their shared evaluative context. Use the same order when recalling a group unless the source context requires a different order.

Each chapter should move naturally from a familiar situation or an unanswered question into an explanation and its consequences in living. Begin by recalling the distinction the previous chapter established, then name the question that remains. The final prose should read as a connected book. Use the recurring setting where it clarifies a new point, and make independent examples recognisably separate. Illustrative scenes remain clearly fictional or hypothetical.

Use a flexible rhythm: **recognisable situation, open inquiry, philosophical explanation returned to living**. First let the reader notice something; then ask what it means and what would fulfil the need; then offer the concept and revisit the situation. Four questions guide the writing: What human aspiration is present? What understanding is needed, including the complete connected concepts? What possibility becomes intelligible? What would its fulfilment require in competence, conduct, material provision and shared arrangements? Emphasise the conditions relevant to that chapter. These are authoring questions, not a mandatory sequence of printed subsections. Reflection opens study; it does not turn the reader's preferred answer into proof of the doctrine.

For example, Chapter 8 can begin with two partners and an elderly parent already sharing dependable care, then responding to changed needs. Ask what their relationships call for, what each person needs and can contribute, and how they will know whether the arrangement fulfils care and dignity. Introduce justice through recognition, value fulfilment, evaluation and mutual satisfaction, then return to what they actually do and any adjustment needed. This supplies a recognisable situation and a philosophical distinction without making any character merely a mouthpiece.

Use ordinary English first. Retain *jeevan* and *satta* where their meanings cannot be carried adequately by a casual synonym; explain each on first use. Use the essential-concepts map to introduce other source terms after their meanings become useful. Keep the glossary concise and cross-reference related meanings rather than repeating whole explanations. Detailed classifications and primary-text pointers belong in chapter notes; an index of terms can make them easy to find without becoming a prerequisite for following the argument.

Before expanding a catalogue scene, identify its main question, the aspiration it reveals, the concept it introduces, the assumptions open to examination and the fulfilment to be evaluated. Let positive accomplishment, care, learning and making have weight in their own right. A satisfying achievement can open further inquiry without first becoming a disappointment. A later appearance should add a distinction, change a responsibility or widen participation. Let work, care and resource constraints have real consequences; characters need not reach easy agreement. Include different ages, abilities and circumstances naturally in the recurring setting. Read sample scenes aloud and ask readers to explain both the concept and what the example establishes. If they retain only "repair immediately," "space is empty air," "justice is agreement" or "liberation means spending less," revise the explanation even if a qualification elsewhere is correct.

With twenty chapters in a working length of 40,000 - 50,000 words, draft around one main reader objective per chapter. Chapters 3 - 6, 17, and 19 carry especially dense material; use the objectives above to decide what belongs in the main explanation and what belongs in source notes. Test the length and clarity with sample chapters before treating the word estimate as a fixed limit.

State the philosophy's positions clearly within the book's established frame. Preserve the difference between a philosophical claim, an observation available in everyday life, and an example constructed to illuminate it. The reader should be invited to understand and examine the account, with no suggestion that agreeing with a teacher or performing a brief exercise proves the whole philosophy.

Short reflection prompts may close selected chapters. They should invite observation, conversation, and examination of action. They are aids to learning, not tests that certify realisation. A few simple figures can show the human being's joint life, the four orders, the process of justice, and the five social functions.

Plan four principal figures: body and *jeevan* with their distinct requirements and joint participation in Chapter 2; the four orders with their cumulative *dharma*s and examples of complementarity in Chapter 5; recognition, fulfilment, evaluation, and mutual satisfaction in Chapter 8; and the five coordinated social functions in source order in Chapter 17. The last figure should show shared purposes and coordination across council levels, with the ten-level enumeration in a separate compact table. Use ordinary labels, give each figure a short explanatory caption, and distinguish an illustrative process from a claimed causal mechanism. Chapter openings and transitions can recall the four aspirations without adding another technical diagram.

Reader testing belongs after sample prose exists. Use Chapters 3, 8 and 17 as an initial range of inner activity, relationship and social organisation, then test the denser continuity explanation in Chapter 19. Ask readers to explain the chapter's particular human possibility and its conditions, explain a connected group in their own words, apply it to a changed situation, identify what the scene demonstrates and what the philosophy separately proposes, and point to wording they could not follow. Record misunderstanding and revise the relevant explanation; a reader's agreement with the philosophy is not evidence of comprehension. Check that revised scenes retain practical weight through care, work, provision and learning rather than relying on exceptional moral tests. When the relevant sample chapters are drafted, also test for confusion between *satta* and empty air (4), relationship fulfilment and a role label (9), prosperity and a bank balance (12), or *kaivalya* and withdrawal from present responsibility (19). In Chapter 3, check that readers can follow expectation, thought and desire before asking them to recall any fuller classification.

The back matter should reconnect readers with the book: glossary entries give a short contextual meaning, related groups and principal chapters; chapter notes give editions, precise page conventions, translation decisions and sources for claims; a term index, if included, directs readers to the substantive explanations. Acknowledgements carry the portrait credit/licence, translation attribution and the supplied song's provenance. Final layout should preserve the opening portrait/wish before the preface and the Hindi song after all back matter. These production elements use the design and evidence already specified here.

Opening page - Babaji and his wish for humanity

Shri A. Nagraj

Whom I affectionately call Babaji.

His wish for humanity

भूमि स्वर्ग हो, मानव देवता हो!
धर्म सफल हो, नित्य शुभ हो।

May the Earth be heaven, May humans be deities,
May dharma prevail, May goodness be eternal.

- Shri A. Nagraj, *Jeevan Vidya: Ek Parichay*, opening address, p. 1. English translation: Rakesh Gupta, *Jeevan Vidya: An Introduction*, p. 7.

Photograph: madhyasth.org / Divya Path Sansthan.

Brief preface

We spend much of our lives learning how to earn, manage a household, care for others, and find our place in the world. Alongside these efforts, certain questions keep returning. What makes happiness dependable? What does it mean to understand another person? How much is enough? How can we live in ways that support both our own fulfilment and the lives around us?

This book introduces Madhyasth Darshan, the philosophy presented by Shri A. Nagraj, through these questions. *The Human Possibility* names the capacity to understand ourselves and the reality we belong to, fulfil our relationships, and participate consciously in humane living. What becomes possible through understanding, and what does its fulfilment require? That question connects the chapters that follow. The name Madhyasth Darshan leads into the study of mediation and orderliness in existence, and of understanding reality. Chapter 4 develops these meanings of *madhyasth* and *darshan* as part of the account itself.

Babaji wanted to see every human being live as *dev-manav*: with awakened understanding, expressed in helping others understand and in nurturing humane living together. His endeavour was to make this understanding and way of living available to everyone. The wish on the preceding page expresses this purpose. This book introduces the account of human awakening through which he proposed its fulfilment.

At its heart is the proposal that existence is coexistence. Things and beings are distinct, yet their existence is inseparable from the reality in which they are present. Human beings have the capacity to understand this and to give their participation a conscious direction. Our desire for happiness, our need for trust, and our responsibility towards nature can then be understood as parts of one life.

The pages that follow begin with familiar experiences: satisfaction in useful work, bodily needs, affection, learning, disagreement and the wish to provide for those we care about. From there, they develop a wider picture of understanding within the person, prosperity in the family, trust in society, and responsible participation with the Earth. Spiritual fulfilment belongs within this whole, finding expression in how we think, relate, work and help understanding continue. This participation also calls for practical ability, dependable conduct, material means and arrangements we sustain together.

No prior study of philosophy is assumed. Unfamiliar words are explained when they become useful. The reader is invited to consider each proposal carefully, discuss it, and examine what it would mean in living.

The hope behind this book is that a clearer understanding of life can make our everyday responsibilities more intelligible and their fulfilment more joyful. The places where this understanding matters are already before us: the people we live with, the work we undertake, and the world we share.

Source map and scope of review

The initial proposal drew on the opening Madhyasth Darshan expositions of the five core Start here studies and the developed related papers. Where a paper's first section is an abstract or framing discussion, its substantive Madhyasth Darshan section was also consulted. The primary passages and writing notes below provide the source grounding for the essential-concepts map, example catalogue, objectives and chapter instructions. This remains book planning; the selected passages below do not verify every eventual chapter claim or revise the related studies.

Primary passages for chapter writing

Use the passage in its surrounding argument and preserve its edition and page convention. MVD page labels match the PDF positions checked; SB, AVD and JVD entries below use PDF positions. JV's printed page is one below its PDF position in the reviewed passages. Paribhasha Samhita's printed page is eight below the position in the inspected scan; its colophon identifies the third edition, 2012, printed 14 January 2016. The Manav Abhyas Darshan reader uses its own displayed page numbering. The English texts are working translations, so a decisive wording should be checked with the accompanying Hindi. JVD's January 2017 source is used through the bilingual working translation dated 12 June 2026; its changing translation length prevents a single printed-page offset.

Source and pages	Chapter use	Definitions and relationships to preserve
Manav Vyavahar Darshan, English working translation, pp. 32 - 35, 50 - 51, 76, 88 - 89, 127	3 - 6, 20	Satta and units; the four aspects and cumulative dharma; inner activities; humane and further consciousness distinctions; three contents of knowledge. Full realisation-based activity is not reserved only for divya consciousness.
Samadhanatmak Bhautikvad, English working translation, PDF pp. 57, 63, 79, 86 - 87, 93 - 94	3 - 6, 20	Sampriktata; five powers, faculties and paired activities; study of form/properties and nature/dharma; the five human categories, including dev-manav's lokeshana with beneficence and divya-manav's complete awakening and beneficence.
MVD, pp. 58, 67, 76, 88, 102, 126 - 127, 208, 257	3, 6 - 7, 10, 13, 20	Definitions of asha - vichar - ichha; priya - hita - labha and nyaya - dharma - satya as complete evaluative groups; the explicit direction from study through experiment/practice to realisation/evidence; faculty correspondences; the three contents of knowledge; the four jeevan values' faculty relations; shravan - manan - arth-bodh. Preserve the different kinds of relationship each passage establishes.
MVD, pp. 58 - 60, 65, 68, 81, 85 - 89, 122, 147, 152, 304, 319 - 321	3, 9, 12 - 13, 16 - 17, 20	The three eshanas' humane definitions; the five categories and their different governing propensities; manav's comprehensive understanding and limited fields of implementation; dev-manav's deployment of people/resources and the meaning of yash; divya-manav's eshana-mukti with continued inner activity and participation. Follow the Hindi where the working English broadens eshana into all desire.
Jeevan Vidya An Introduction, printed pp. 19, 28, 30, 68, 72 - 74, 127 - 128, 138 - 139, 162	3 - 6, 10, 12, 19 - 20	Liberation from delusion; the name madhyasth; the room/interval entrance to omnipresence; knowing, believing, recognising and fulfilling; activities and humane evaluation; prosperity; understanding together with sensitivity.
MVD, pp. 52 - 53, 60 - 62, 189 - 190, 235 - 236, 244 - 254, 331 - 341, 344 - 345	7 - 10, 13, 16 - 17	Six humane qualities; definite relationship expectations towards completeness and voluntary expectations in sampark; rightful wealth, fidelity and kindness; seven relationships and their purposes; established and expressed values; birth, parental responsibility and accepted sibling-like relationships.
Anubhavatmak Adhyatmvd, English working translation, PDF pp. 91 - 93, 170 - 171	7 - 10, 12	Paired value positions; material provision through labour and rightful receipt through remuneration, gift and award; marital responsibility and human tradition.
Paribhasha Samhita, official source collection, printed pp. 151, 154; PDF pp. 159, 162 in the inspected Hindi scan	7 - 8, 14	Thirty values as 4 jeevan + 6 human + 9 established + 9 expressed + 2 object values. The Axiology reference entry identifies the scan.
Paribhasha Samhita, printed pp. 2, 54; PDF pp. 10, 62 in the same inspected Hindi scan	3, 9, 12, 17, 20	The stated direction from four bodily preoccupations through the three eshanas and lokeshana to universal well-being; eshana in the sense of desires expressed for universal well-being; jan-bal, dhan-bal and yash-bal. Preserve its positive definitions.

Source and pages	Chapter use	Definitions and relationships to preserve
Paribhasha Samhita, printed pp. 38 - 39, 163, 191, 222 - 223 / PDF pp. 46 - 47, 171, 199, 230 - 231; MVD pp. 265 - 267, 342; JV printed pp. 127 - 128 / PDF pp. 128 - 129; JVD PDF pp. 139 - 140, 274 - 277	12, 17 - 18	Assessed material needs and their limits; productive labour and production beyond need through cyclical methods; access to productive means; gain-obsession and the wider meanings of deprivation; family reserves, shared exchange and symbolic currency. Follow the Hindi in the JVD passages where the working English contains editorial variants. These passages support a connected prose explanation, not a single source equation.
Manav Abhyas Darshan, Hindi reader p. 30	8 - 9	The nine established values and their expressed counterparts in corresponding order. Preserve meanings, not only the count.
AVD, PDF pp. 70, 79, 156	3, 6, 13, 20	Natural acceptance of justice, dharma and truth, including before clear understanding; acceptance established through study, comprehension and realisation.
Paribhasha Samhita, printed pp. 207, 216; PDF pp. 215, 224	3, 10 - 11, 17	Sanyam as regulated activity; sanyamata as humane thought, behaviour and work; the complete sensory/material triad integrated into the humane triad; bodily health and the joint health - restraint account.
JV, printed pp. 19, 48 - 49, 53 - 54; MVD, pp. 90, 94, 134, 179, 187, 217 - 218, 289 - 291; SB, PDF pp. 236 - 237	13, 19 - 20	Enduring jeevan, bodily change and re-embodiment; formation through study, behaviour and work; positive and broader developmental uses of sanskar; human tradition as transmission between people.
Paribhasha Samhita, printed p. 37 / PDF p. 45, entry amushmik; AVD, PDF pp. 260 - 262	19 - 20	Awakened jeevan retains awakening after bodily death; kaivalya joins realised understanding, resolution and expressed participation with the further account that bodily journeys are no longer needed while awakened activity continues.
Vyavaharatmak Janvad, English working translation, PDF pp. 133 - 134, 249 - 256, 279 - 281, 292, 298, 305, 315, 321, 327 - 328, 342 - 343; MVD, pp. 161, 260 - 261	17	Ten council levels from family to world-family; representation and its qualifications; five functions across levels; coordination, evaluation and support in both directions.

Verified decisions for chapter sources

The five source-analysis questions previously tracked under BOOK-01 were resolved for this book's planning scope on 2 October 2026. The decisions below govern the concept maps, scenes and chapter instructions. They specify what the eventual chapter may explain and where its source support lies; new claims introduced while drafting will still need their own passage checks.

Natural acceptance and understanding

AVD PDF p. 156 explicitly identifies justice, dharma and truth as naturally accepted by jeevan even without clear understanding. In that passage, dharma includes universal orderliness and undivided society. Page 70 distinguishes accepting orderliness from being able to explain it; p. 79 explains how study, recognition, comprehension and realisation establish acceptance as sanskar. These passages support a positive account more specific than a general wish to live harmoniously.

Chapters 3 and 6 should therefore keep three distinctions together: what is naturally accepted, what a person presently assumes or prefers, and what the person has come to understand and fulfil. In Eo3, each person can seek justice and clarity while misreading the other's conduct. Their shared orientation makes inquiry meaningful; it does not make either interpretation correct in advance. The return in Eo8 should show learning changing recognition and fulfilment. Avoid treating natural acceptance as either an arbitrary preference or a guarantee that every immediate judgement is true.

Health and restraint

Paribhasha Samhita printed p. 216 / PDF p. 224 defines swasthya through the body's assimilation and expression of necessary elements. Its swasthya - sanyam entry joins a body capable of expressing awakening with jeevan as the body's seer. Printed p. 207 / PDF p. 215 defines sanyam as a regulated programme, sanyamata through humane thought, behaviour and work, and sanyat through the integration of priya - hita - labha within nyaya - dharma - satya. MVD pp. 260 - 261 locates health - restraint among the five social functions.

Chapter 11 should explain bodily health, understanding-guided regulation and their joint contribution to participation. Nourishment, protection and right use give E12 its practical content; they do not replace the fuller definitions. The scene should show changed expectations, thoughtful work and dependable help as well as physical care. This account supplies no clinical regimen and does not establish that an ill or disabled person lacks understanding. Connect the chapter back to Chapter 3's complete evaluative groups and forward to collective provision in Chapter 17.

Sanskar, individual continuity and humane tradition

JV printed pp. 19 and 53 - 54 / PDF pp. 20 and 54 - 55 affirms continuing jeevan and further embodiment in its discussion of delusion. Printed pp. 48 - 49 / PDF pp. 49 - 50 distinguishes changing bodily composition and learning that another person can understand and convey further. MVD pp. 90 and 94 gives both the positive completeness-oriented use of sanskar and the broader su-sanskar/ku-sanskar distinction; pp. 179, 187 and 217 - 218 explains its formation through prior activity, study, behaviour and work, and its establishment in jeevan. SB PDF pp. 236 - 237 distinguishes bodily lineage from jeevan-centred sanskar and family tradition.

Paribhasha Samhita printed p. 37 / PDF p. 45, under amushmik, explicitly affirms retention of awakened principles after bodily death. AVD PDF pp. 260 - 262 explains kaivalya through comprehensive resolution, participation in wider orderliness, expression and communication, and continuing awakened activity. Within this account, p. 261 adds that bodily journeys are no longer needed, while awakened activities continue after bodily dissolution. Read together, these support enduring individual jeevan and retained awakening, distinct from the teaching transmitted between different people. Chapters 19 - 20 must preserve the kaivalya qualification rather than describing re-embodiment as endlessly necessary for every jeevan.

The book should explain these three continuities separately: bodily composition and lineage; individual jeevan and awakened attainment; and understanding made available through human tradition. E09, E14 and E17 give the third a concrete development when a learner independently understands, acts and teaches. The sources checked do not establish intact transfer of every memory, craft skill or habit into a specified next life. MVD p. 90's working English adds a carried-forward gloss that the Hindi does not itself specify as transfer between births; do not make that phrase the basis of a stronger claim. Nor does another birth guarantee progress: MVD pp. 134 and 289 - 291 keeps study, formation and environment relevant to awakening or decline. These limits define the book's claim; speculative mechanisms of memory transfer are outside its scope. JV's discussion of further embodiment in delusion and AVD's kaivalya qualification should be explained in their respective contexts. Do not turn them into a mechanical equation of sanskar with incomplete awakening, a rule that bodily life itself proves incompleteness, or a claim that another birth automatically brings completion.

Ten council levels and five social functions

JVD PDF pp. 133 - 134 gives the general council account and complete five-function group; MVD p. 161 confirms family as the beginning of ten levels. The detailed JVD passages establish the following sequence. The English labels explain relative reach; source names at the wider levels are retained because working translations vary.

Level and council	Meaning for Chapter 17	JVD PDF pages
1. Parivar / parivar sabha	Family as the first field of shared understanding, provision, responsibility and decisions.	237 - 238, 249
2. Parivar-samuh sabha	Family-group council, with one representative from each of ten families.	250 - 253
3. Gram/mohalla-parivar sabha	Village or neighbourhood council, represented through family-group councils.	253 - 256, 280
4. Gram-samuh sabha	Village-group council, joining village/neighbourhood councils.	280 - 281
5. Kshetra-parivar sabha	Area council, represented through village-group councils.	292 - 298
6. Mandal-parivar sabha	A wider grouping of area councils; retain mandal as the source name.	298 - 304
7. Mandal-samuh-parivar sabha	Mandal-group council.	305 - 315
8. Mukhya-rajya sabha	The next wider council, represented through mandal-group councils.	315 - 321
9. Pradhan-rajya sabha	Council represented through mukhya-rajya councils; keep the two names distinct.	321 - 327
10. Vishva-parivar-rajya sabha	World-family council, including the source's provision when fewer than ten pradhan-rajya councils are available.	327 - 328

Teach this sequence together with the complete function group, in source order: shiksha - sanskar, nyaya - suraksha, utpadan - karya, vinimay - kosha, swasthya - sanyam. The ten levels express the reach of participation; the five functions express coordinated kinds of work. JVD PDF pp. 279 - 280 describes five village committees with locally determined membership, so the ten-person council pattern must not be copied into every committee. Pages 342 - 343 describes communication and response between local and world-family levels. The Chapter 17 figure should make these connected purposes visible; the full council enumeration can remain a compact table.

Preserve the qualifications in the chapter notes. The tenth-level account permits representatives from mandal-group or mukhya-rajya councils to complete its ten members if ten pradhan-rajya councils are unavailable. The village account allows at least ten family-groups; each village council determines its representatives' tenure with regard to local and shared suitability. These details prevent a rigid population formula or a mathematical fractal claim. Explain recognised understanding, representation and fulfilled responsibility without importing present-day electoral rules or administrative boundaries. In the working translation, pp. 315 and 321 sometimes flatten mukhya-rajya and pradhan-rajya into the same English name; the Hindi distinguishes them. The summary at pp. 158 - 159 repeats village/neighbourhood at the fourth position; the enumeration at p. 134 and the detailed fourth-level passage at pp. 280 - 281 establish gram-samuh. Use the detailed account. The water scene illustrates the responsibilities proposed, not demonstrated success of a universal institutional implementation.

Evaluative perspectives and the Ethics study

MVD p. 58 defines priya, hita and labha; p. 67 gives the six perspectives in two complete groups; pp. 102 and 126 treats nyaya - dharma - satya together as the humane basis of evaluation. These passages do not establish a one-to-one conversion of pleasantness into justice, health into dharma and profit into truth. MVD pp. 67 and 137 does support a different relationship: justice in behaviour, dharma in thought, and truth in realisation. Keep those functional distinctions while applying the whole humane group to a decision.

The existing Ethics study, Section 3.2, contains a three-line diagram pairing the two triads term by term. That diagram is not supported by the cited MVD passage and is not a source for the book's mapping. Its surrounding whole-group contrast and Section 3.3's behaviour/thought/realisation distinction remain useful when checked against MVD. Chapters 3 and 10, the glossary and the figures should use the verified whole-group relationship: bodily benefit and gain are evaluated through justice, dharma and truth together. E03 and E10 make this visible by returning to the same care or provision decision through all three humane perspectives. This resolves the Primer's source-use question. Applying the finding to the related study is recorded separately as ST-FIX-02 in [PENDING.md](#); that study has not been revised by this planning review.

Related studies

Study and relevant sections	Main contribution to the proposed book
Why Humans Are Not Just Material, Section 1	Chapters 1 - 3: human aspiration, body and jeevan, the need for understanding.
The Ontology of Coexistence, Sections 1.1 - 1.16	Chapters 2 - 7, 10, 17 - 20: coexistence, nature, order-specific <i>dharma</i> , the humane evaluative perspective, <i>jeevan</i> , values, continuity, and the connection to human living.
The Epistemology of Coexistence, Sections 1.1 - 1.6	Chapters 3, 6, 10, 13, 20: learning, inner activity, evaluation, practice, and evidence in conduct.
Axiology: Value Theory, Section 1	Chapters 7 - 15: human <i>dharma</i> as happiness, values, relationships, evaluation, prosperity, useful work, and education.
Family Relationships and Values, Section 1	Chapters 8 - 9, 12 - 13: relational purpose, family participation, provision, and education.
Ethics and Morals in Human Beings, Section 3	Chapter 10: humane conduct, character, responsibility and right use. For evaluative groups use MVD directly; Section 3.2's term-by-term transition diagram is excluded for the reasons in the verified source decisions.
Aesthetics, Section 4, together with Ontology Section 1.14	Chapter 14: useful objects, aesthetic refinement, skill, and meaningful expression.
Human Behavior and Society, Section 1	Chapters 8 - 18: conduct, purpose, family, prosperity, nature, and social organisation.
How to Form Self-Sustaining Organizations, Sections 5 - 6, 8 - 10	Chapters 13, 16 - 17: shared purpose, learning, participation, and governance. Specific transition recipes are treated as applications.
How Undivided Society Is Established, Sections 1 - 2, 5	Chapters 9, 12 - 13, 16 - 18: human identity, family, five social functions, and humane institutions.
Nature of Time, Section 1	Chapters 4 and 19: change, duration, and continuity where they help the human account.
Spiritual Practice and Realization, Section 1	Chapters 6, 19 - 20: study, inquiry, realisation, liberation from delusion, and its expression in ordinary living.

The opening of [A State-Dynamic Model of Coexistence](#) was also reviewed. Its formal reconstruction does not supply additional doctrine for this primer. Its use of a continuing concrete example is useful as a writing technique.

Education and Sanskar; Health, Body, and Restraint; Work, Action, and Karma; Prosperity, Economics, and Right Use; Governance, Justice, and Undivided Society; Nature, Ecology, and Right Use; Science, Technology, and Human Purpose; and Death, Continuity, and Rebirth currently have proposal placeholders rather than completed expositions. Related proposals on mind, agency, methodology, language, and the sacred are similarly undeveloped. Chitta, Brain, and Memory contains a substantial research proposal, whose proposed synthesis is not treated here as an established finding.

The associated book chapters are legitimate parts of the proposed scope. Their initial footing is in the developed studies above; fuller chapter writing requires relevant primary-text support rather than treating the proposal descriptions as completed arguments. The proposed book does not depend on reproducing each repository title as a separate chapter.

Planned note inventories

Chapter 3's faculty note should connect the source names, powers and complete activity pairs. The five powers are *asha - vichar - ichha - ritambhara - praman*, following SB PDF p. 63. Keep the map available without making it a compulsory sequence of steps in every decision. The following pairs retain the reflection/projection presentation used in this plan; that passage presents projection/reflection in the reverse order. Explain the correspondence, not a timing rule.

Faculty	Power	Activities in the chapter note
Mun	Asha	Tasting (<i>asvadan</i>) and selection (<i>chayan</i>).
Vritti	Vichar	Deliberation/evaluation (<i>tulan</i>) and analysis (<i>vishleshan</i>).
Chitta	Ichha	Contemplation (<i>chintan</i>) and visualisation (<i>chitran</i>).
Buddhi	Ritambhara	Comprehension (<i>bodh</i>) and resolve (<i>sankalp</i>).
Atma	Praman	Realisation (<i>anubhav</i>) and authenticity (<i>pramanikta</i>).

Chapter 6's note should keep three source contexts explicit: *shravan - manan - arth-bodh* for learner study (MVD p. 257); study, experiment/practice and realisation/evidence as the stated first, second and third learning movements (p. 88); and *manan - mun, tulan - vritti, sakshatkar - chitta, bodh - buddhi* as faculty correspondences (p. 126). Explain sakshatkar in that context without turning the correspondence table into an automatic ladder of attainment. Chapter 10's note should display both full evaluative triplets and their affirmative/negative alternatives together (pp. 58, 67, 102, 126).

Chapter 7's thirty-value note should name all four jeevan values, all six humane qualities and the two object values, then cross-reference Chapter 8's complete relationship-value map. The nine pairs below preserve the order of the checked Hindi reader passage; the main chapter may introduce them in an order suited to the care and learning scenes.

Established relationship value	Expressed counterpart
Kritagyata	Saumyata
Gaurav	Saralata
Shraddha	Pujyata
Prem	Ananyata
Vishwas	Saujanyata
Vatsalya	Sahajata
Mamata	Udarata
Samman	Sauhardrata
Sneh	Nishtha

The note must explain each pair using its source definition. In particular, *gaurav* concerns willingly embracing emulation, while gratitude acknowledges help received; *saujanyata* concerns cooperation,

participation and complementarity rather than simply giving; and saumyata needs its sense of willing restraint and civility. Chapter 9's seven-relationship note should preserve mata-pita/putra-putri, pati-patni, guru-shishya, bhai-bahin, sathi-sahyogi, participation in vyavastha/samagra-vyavastha, and mitra, with their respective responsibilities. Chapter 20's fuller classifications should explain the distinctions between completions and forms of awakened living without converting them into a quick self-assessment exercise.

Chapter 20's motive note should place the three eshanas alongside perspective (*drishti*), governing propensity (*vishaya/pravritti*) and characteristic conduct (*swabhava*) in the five-category account. MVD pp. 85 - 89 and 304 preserve realisation-based understanding in manav as well as dev/divya; p. 321 explains lokeshana through the wider establishment of humane tradition; p. 147 explicitly connects eshana-mukti with divya-manav. Explain this freedom positively with pp. 81, 89 and 152 on continued inner activity and initiative. Terms such as *bhraantabhraant*, *sabij* and *nirbij* require their own contextual note, not a shortcut equating humane manav with an uninformed or morally average person. The technical deenta/heenta/kroorta distinctions also need the Hindi definitions, without identifying poverty, receiving care or low self-esteem with a consciousness category.

The five planning-level source questions are resolved above. Manuscript development, the four figures, glossary and source notes, reader testing, and final editorial/layout work remain tracked under [BOOK-01 in PENDING.md](#). Drafting still includes checking new claims and quotations against their sources. This plan records the writing design and verified decisions rather than a separate task register.

Final page - Gratitude to Babaji

वंदना

वंदना उनकी करें, जिनसे सुशोभित है धरा।
 जिनसे है मानव का पथ, प्रकाश ज्योति से भरा ॥
 जिनसे दिशा हमको मिली, नित मानवीय मार्ग की।
 पथ मिला निश्चित हमें, थी कामना जिस मार्ग की॥
 कृतज्ञता से सौम्यता की, नित्य आई निरंतरा।
 जिनसे है मानव का पथ प्रकाश ज्योति से भरा॥

जिनका है चिंतन शुभ यही, कैसे हो मानव सुखमयी?
 प्रेरणा से जिनकी है, मानव का जीवन सुखमयी॥
 श्रद्धा समर्पित जिनसे आए, मानवीय परंपरा।
 जिनसे है मानव का पथ प्रकाश ज्योति से भरा॥

सबके सुख की कामना ले, रहती है जिनकी प्रेरणा।
 निकली जिनसे मानवीय पथ, हेतु निश्चित योजना॥
 पूज्यता उन हेतु जिनसे, हो सुसज्जित हो वसुंधरा।
 जिनसे है मानव का पथ प्रकाश ज्योति से भरा॥
