

MADHYASTH DARSHAN · CO-EXISTENTIALISM

The Ontology of Existence

*Existence understood as coexistence — nature saturated in
Omnipresence*

Based on §1 of *The Ontology of Coexistence* (AnalyticMadhyasthDarshan.org)

Primary texts of Shri A. Nagraj — MVD · SB · JV (tr. Rakesh Gupta)

FRAMING

The Questions Ontology Must Answer

What is Existence? — Is there one fundamental reality, or many — and how are they related?

What exists? — What are the basic constituents of reality, and what is each of them?

Does what exists begin? — Did reality originate at some time — or is origination only of configurations?

Does the self begin or end with the body? — Is the individual self (jeevan) produced by the body and destroyed with it?

Is the world finally real? — Is the plural world of units an appearance, or real in its own right?

How can what exists be known? — What must be understood — and at what scope — to know each aspect of reality?

Madhyasth Darshan answers each from a single starting point: existence is coexistence.

Existence Is Coexistence

Omnipresence (satta / vyapak)

Formless, all-pervasive, non-transforming, immeasurable — actionless energy (kriya-shunya urja). It performs no actions, yet units are energized, regulated, and conserved in it. It has no absent place.

Units of nature (ikai)

Formful, active, countable entities — each bounded from six directions, and each soaked, submerged, and surrounded in Omnipresence, with form, properties, essential nature, and dharma.

Never two separate poles

Separation of unit from the saturated whole “never happens.” Ground is sthitipurn (state-complete, changeless); saturated nature is sthitishil (state-dynamic) — all change is unit-activity.

Saturation: The Ground–Unit Bond

Every formful unit is soaked, submerged, and surrounded in Omnipresence — like a sponge in water, never pushed by it. This saturated coexistence is evident in the sentient atom as gyan, and in every unit as the three endowments.

Recognition capability

Complementarity is given in coexistence, not created. Bounded plurality within saturation provisions mutual recognition — capacity (kshamata), ability (yogyata), receptivity (patrata).

Activeness

“Unit + Energy fullness = Activeness.”
Inherent energy and basic impulsion make every unit active — appearing as the inseparable triad effort–motion–result (shram–gati–parinam).

Inherent regulation

Saturation is where a unit gets regulatory order in it. Regulation manifests as law and orderliness — mediative, conserving every unit, never a statutory command from outside.

§ 1.3

What Every Unit Is: Four Inseparable Aspects

Form (roop)

Shape, volume, and density — by which a bounded unit is individuated. Shared across all orders.

Properties (gun)

Effects units have on one another in mutuality — generative, degenerative, and mediative (assisting creation, dissolution, sustainment).

Essential nature (svabhav)

How the usefulness of a unit's properties participates in its order — its distinctive way of being (its ness).

Dharma

What a unit cannot be separated from — its innateness and fulfilment. Since existence is coexistence, indestructibility is the ultimate dharma.

Natural state → development (fulfilment aligned with innateness) along with its environment, orderliness with its ness.

Excited state → decline — each unit is a whole

Units in Relationships

“Nothing is isolated — that is the principle” (JV p. 43). Complementarity is actualised as value in mutuality; the unit’s main drive is to recognise and fulfil its relationships.

Relationship (sambandh)

Mutuality where expectations are predetermined in the sense of completeness — e.g. parent and child.

Contact (sampark)

Mutuality where expectations are voluntary — e.g. neighbours who share a wall.

Essentiality is value (mulya). Object values (utility, art) operate at every order; jeevan harmonies, human values, relationship values, and expression values presuppose the knowledge order.

Below the knowledge order fulfilment is definite; at the human order it must be achieved through this chain.

§ 1.5

The Four Orders of Nature

Order	Essential nature (svabhav)	Dharma (cumulative)	Status
Material (padarth)	integration–disintegration	existence (astitva)	insentient (jada)
Bio / pranic (pran)	vitalising–devitalising	+ growth (pushti)	insentient (jada)
Animal (jeev)	cruel–uncruel	+ hope to live (jeene ki aasha)	sentient — jeevan appears
Knowledge / human (gyan)	fortitude, courage, generosity, kindness, grace, compassion	+ happiness (sukh)	sentient — awakening possible

The sentience boundary lies between pran and jeev: hope to live is the defining activity of the sentient unit. Higher orders include the dharmas of lower orders cumulatively — each order a stable plateau, not a human typology.

The Completeness Drive

Every unit, saturated in satta, carries a drive toward completeness — built into existence itself, not an ethic added to matter. The drive does not stop until what is soaked in satta comes to realise satta. All of nature develops; awakening happens in the sentient. And every activity is one inseparable triad — effort, motion, and result together, not three steps in a row.

*goal: restfulness of effort
(shram ka vishram)*

*goal: destination of motion
(gati ka gantavya)*

*goal: immortality of result
(parinam ki amarta)*

Two atomic paths

Insentient atom: triad drives exchange toward constitutional completeness (T1).

Jeevan atom: triad works through projection-reflection toward T2 and T3.

§ 1.6

Three Completeness Transitions: T1, T2, T3

T1

Constitutional completeness (gathanpurnata) — immortality of result; sentient jeevan appears

T2

Activity completeness (kriyapurnata) — restfulness of effort; direct realisation, absolute resolution (samadhan)

T3

Conduct completeness (acharanpurnata) — destination of motion; authentic conduct, living proof (pramanikta)

T1 completes the insentient path; T2 and T3 belong to the sentient path — inner settling (T2) and outer destination (T3) are different completions. What is saturated in the ground comes to realise the ground: that is the completeness drive.

§ 1.6.1

T1 — The Irreversible Sentience Threshold

Constitutional completeness at the atomic level, not neural complexity, molecular size, or elevation along the order chain. An evolving insentient atom incorporates particles through hungry and overfull complementarity within a conducive environment; when the required particles integrate, the constitution closes.

Before T1 — evolving atom

- Carries molecular-bondage and weight-bondage
- Particle count still changing; development in progress
- Exhibits radiance and projection as an insentient unit

After T1 — jeevan atom

- Liberated from molecular- and weight-bondage; hope-bondage carries the drive — a new mode, not a new direction
- No increase or decrease in particles: qualitative change without quantitative change
- Reflects what is ever-present in satta as active sentience — latency actualised

T1 is irreversible at the atomic level: the jeevan atom is immune to decomposition — the ontological basis for jeevan's persistence. Taste-recognition, impossible in insentient nature, first manifests here — recognition gains its inner circuit.

Jeevan: The Sentient Atom

nucleus = atma; particles in the four orbits are the four faculties
(MVD p. 78)

Faculty / strength	Projection (paravartan)	Reflection (pratyavartan)
Mun / hope	selection	taste (asvad)
Vritti / thought	analysis	deliberation
Chitta / desire	visualisation	contemplation
Buddhi	resolve (sankalp)	enlightenment (bodh)
Atma	authenticity (pramanikta)	realisation (anubhav)

Reflection is the knowing direction — ascent of understanding toward anubhav; projection is the evidencing direction — descent from realisation to conduct. *On the delusional plane, atma is “I” and the orbital four are “mine”; awakening — staged as three statuses of buddhi — is the four coming into accordance with atma.*

§ 1.8 · HARMONY WITHIN

Jeevan Values and Persistence

Happiness (sukh)

harmony of mun and vritti

Peace (shanti)

harmony of vritti and chitta

Contentment (santosh)

harmony of chitta and buddhi

Bliss (anand)

harmony of buddhi and atma

Awakening is felt harmony: as the orbital faculties come into accordance with atma, the four jeevan values register in the lower faculties. Inward regulation — mediative atma disciplining faculties and body — channels jeevan's energies toward development.

"Jeevan continues to exist even after death as it does while driving a body."

Constitutionally complete, jeevan persists across bodily birth and death, carrying impressions and its state of awakening. — JV p. 20

Progressions and Planes

Four progressions (how nature moves)

- 1 **Niyati-kram** — fixed order emergence: material → pranic → animal → knowledge
- 2 **Niyati-vidhi** — definiteness in each order's proper conduct
- 3 **Vikas-kram** — atomic development up to constitutional completeness (T1)
- 4 **Jagriti-kram** — awakening within jeevan toward fuller activity and conduct

The two axes meet at the pranic→animal junction: the order chain delivers the animal body; atomic completeness delivers the jeevan atom.

Four planes (where a unit stands)

Order	Plane(s) occupied
Material	Physicochemical
Bio / pranic	Physicochemical
Animal	Delusional
Knowledge / human	Delusional → deific → divine

Order names what a unit is; plane (pad) names how far its development has gone. Two orders map to one plane; one order spans three — the axes never line up one-to-one. Five human types mark degrees of awakening across the last three planes.

Regulation, Law, and Justice

Orderliness is self-regulation, inherent in saturated units — not dispensed by a cosmic governor. **This mediative (madhyasth) regulation, which regulates and conserves every unit, gives the darshan its name.**

Order	Conformance mode (niyati-vidhi)	Definite or achieved
Material	result- / structural-conformance	definite
Bio / pranic	seed-conformance	definite
Animal	species-conformance (via adhyasa)	definite
Knowledge / human	sanskar-conformance	achieved: knowing → believing → recognising → fulfilling

Justice (nyaya) names the evaluative closure of the relational cycle at the knowledge order: recognising relationships, fulfilling values, evaluating, achieving mutual satisfaction. Awakened evaluation takes refuge in justice, dharma, and truth — not merely pleasant, healthy, and profitable.

§§1.3, 1.7, 1.12 · WHAT KNOWING NEEDS — AND HOW IT HAPPENS

The Epistemic Ladder

What must be understood — scope

dharma · needs the whole

svabhav · needs its order

gun · needs mutuality

form · the unit alone

reflection (pratyavartan) · knowing deepens

How knowing happens — within jeevan

Atma realisation (anubhav) — only through truth · authenticity (pramanikta)

Buddhi enlightenment (bodh) of existence, jeevan, conduct · resolve (sankalp)

Chitta contemplation & visualisation · revelation (sakshatkar)

Vritti deliberation in refuge of justice—dharma—truth · analysis

Mun taste (asvad) & selection — first acceptance of the proposal

projection (paravartan) · evidenced in conduct

*a higher rung means a wider context is needed to understand the aspect —
not distance from the unit*

The ladders meet: the widest scopes are understood as bodh in buddhi, realised as anubhav in atma — JV pp. 61, 120, 138 · MVD pp. 78, 101, 137

Realisation in Coexistence

The drive comes to rest when relationships across nature are fulfilled and made evident in coexistence — not because satta becomes a knower, but because awakened jeevan lives out what was always latent in the bond. Realisation itself is awakening; recognising and fulfilling then become its living proof.

Realisation is bliss (anand)

“Truth itself is abundance (coexistence), realisation of abundance itself is bliss, bliss itself is jeevan.” And it is knowledge itself: what is realised is the ground the unit was always soaked in.

Knowledge — in projection

Realisation projected outward is authenticity — knowledge, wisdom, and science (gyan–vivek–vigyan) unfolding into conduct (gyan udghatan).

Knower — in reflection

The knower is jeevan filled with realisation. When buddhi reflects toward atma, self-knowledge (atma-bodh) and realisation in coexistence arrive together.

Knowable — and no merger

What is known is existence itself — nature saturated in satta. Knowledge, knower, and known become uniform as roles in one bond — not a merger: the knower remains a distinct jeevan.

Conservation and Human Goals

Coexistence conservation

What exists does not arise from non-being and cannot be annihilated; only configurations change. The world is perpetual (jagat satat).

Jeevan persistence

Constitutionally complete and immune to decomposition, jeevan persists across bodily birth and death. Satta stays state-complete; units stay state-dynamic.

At the human scale, the drive shows itself as four goals — rising from the person, through the family, to an undivided society (akhand samaj) in universal orderliness (sarvabhaum vyavastha):

Resolution

samadhan — understanding settled, nothing left unresolved

Prosperity

samridhi — producing more than needed, used rightly

Fearlessness

abhay — trust in the present and in society

Coexistence

saha-astitva — with humans and with nature

THE CULMINATION · BUILT INTO THE DESIGN

An Awakened Human Tradition

The drive that began in every atom comes to rest in awakened human beings — effort settled in realisation, understanding proven in daily conduct. The progression was always headed here.

They live as one undivided society — resolution in every person, prosperity in every family, fearlessness and trust in society, coexistence with all of nature.

A humane tradition: each generation raised into the same understanding, carried on.

The Questions, Answered

Question	Madhyasth Darshan answer
What is existence?	The eternal coexistence of satta and units
What exists?	Omnipresence (satta) and countable units (ikai)
Does it begin?	No; only temporary configurations do
Does the self begin?	Jeevan is constitutionally immortal; it does not end with the body
Is the world real?	Yes — the world is perpetual (jagat satat)
How can it be known?	Staged study → practice → realisation with conduct-evidence (pramanikta) — each aspect known at its scope, from the unit alone to the whole

Lived verification through humane conduct is the final proof of realisation — §1.16
