

Research Note: Pass-One Anatomy of the Remaining *Jeevan* Activities

Author: Raghava Mohan Madhwapathi (analyticmadhyasthdarshan.org)

Edited on: August 16, 2026, 8:23 AM IST

Status: Internal research note (not a catalog entry). Pass One of the activity-to-sphere analysis.

Scope: This register completes source and activity-anatomy coding for the 106 activity-members not already analysed in the eight [pilot dossiers](#). Together, the pilot's sixteen records and this register's 106 records cover all 122 tabulated positions. This pass records source assignment, entry form, bearer, object, counterpart, endpoint, governing criterion, pair semantics, and documentary uncertainty. It does not code lifecycle conditions, spheres, family forms, or institutions. Section 7 specifies the normalization gate required before those 122 anatomy records become a comparable Pass-Two dataset.

1. Method and limits

The AVD table governs which member occupies the *bal* and *shakti* columns (AVD, pp. 91-94). The detailed MVD definitions govern the content assigned to those names (MVD, pp. 328-348). Every record below was checked against both presentations through [The Sixty-One Activity Pairs of Jeevan](#), which preserves the Hindi wording, English rendering, translation variants, and the cases in which a definition does not behave like the name of an operation.

The fields have deliberately narrow meanings. **Entry form** asks what kind of item the source has placed in the activity slot. **Bearer** asks whether the item is borne by *jeevan*, a human role, a relationship, the body, a material unit, or a result. **Object** is what the member concerns. **Counterpart** is another participant or entity required by the definition; “none stated” does not deny later outward evidence. **Endpoint** is the nearest fulfilment named or implied by the definition. **Criterion** distinguishes fulfilment from a plausible imitation. Where the definition does not supply such a distinction, the field remains open rather than being filled from a preferred social model.

The codes retain the pilot convention: **D** is directly stated, **I** is a structural inference from stated content, and **O** marks an unresolved documentary or interpretive question. Pair semantics are always narrower than the mere fact of pairing. No record assumes that the *shakti* member is an outward performance caused by its *bal* partner. Because these compact records sometimes place direct source content and interpretation in one row, the normalization gate must assign provenance to each field separately before comparison.

The completed corpus is:

Faculty	Total members	Pilot members	Members completed here
<i>Atma</i>	2	2	0
<i>Buddhi</i>	4	2	2
<i>Chitta</i>	16	2	14
<i>Vritti</i>	36	4	32
<i>Mun</i>	64	6	58
Total	122	16	106

2. *Buddhi*: one remaining pair

B-01 - *Anand* / *dhee*

Source check: AVD, p. 91; MVD, pp. 327-328. The detailed passage explicitly names bliss and *dhee* as the pinnacle of acceptance of the state and motion of awakening.

Field	B-01a - <i>anand</i>	B-01b - <i>dhee</i>
Source content	Endless, uninterrupted, eternal celebration activity	Inclination of celebration; readiness for projection
Entry form and bearer	Awakened success or continuing activity in <i>buddhi</i> , borne by <i>jeevan</i>	Readiness and inclination in <i>buddhi</i> , borne by <i>jeevan</i>
Object	The accepted state of awakening and its uninterrupted celebration	The motion of awakening and the projection of celebration
Counterpart	None stated for the inward activity	Outer faculties are implicated by “projection”; no interpersonal counterpart is stated
Endpoint	Uninterrupted celebration grounded in awakening	Availability of that celebration for projection
Governing criterion	Acceptance of awakening and continuity, rather than episodic stimulation	Fidelity to the accepted awakened content, rather than excitement or impulsive expression

Pair semantics and limit: The source directly distinguishes the accepted state and motion of awakening as *anand* and *dhee* (**D**). Treating *dhee* as a general executive power, or treating bodily festivity as sufficient evidence of either member, would exceed this definition (**O**).

3. Chitta: seven remaining pairs

C-01 - *Shruti* / *smriti*

Source check: AVD, pp. 91-92; MVD, pp. 328-329.

Field	C-01a - <i>shruti</i>	C-01b - <i>smriti</i>
Source content	Linguistic articulation of understanding of reality, knowledge of <i>jeevan</i> , and the holistic view of existence	Repeated presentation through language of understood and directly recognised content as often as required
Entry form and bearer	Cognitive-linguistic articulation in <i>chitta</i> , borne by <i>jeevan</i> and expressed by the embodied person	Retentive and re-presentational activity in <i>chitta</i> , borne by <i>jeevan</i>
Object	Understood reality, <i>jeevan</i> , and existence	Reality indicated through language and accepted with direct recognition and visualisation
Counterpart	A hearer is implied by communication, though no particular relationship is stated	An occasion or hearer for renewed presentation is implied, not specified
Endpoint	Faithful linguistic expression of understanding	Repeatable availability of the same understood content
Governing criterion	Agreement between language and understanding of reality	Fidelity to directly recognised content rather than rote verbal recurrence

Pair semantics and limit: The pair joins first articulation with repeatable presentation of understood content (I). It does not establish that *smriti* is bodily memory storage or that repetition alone is evidence of understanding (O).

C-02 - *Medha* / *kala*

Source check: AVD, pp. 91-92; MVD, p. 329. The earlier unpaired glossary calls *medha* the bearer of *kala*; the paired definition calls it the carrier-bearer of memory and also connects it with direct recognition of art.

Field	C-02a - <i>medha</i>	C-02b - <i>kala</i>
Source content	Carrier-bearer of memory; contemplation or direct recognition of art; acceptance of usefulness and art aligned with science and wisdom	Beautification activity together with usefulness

Field	C-02a - <i>medha</i>	C-02b - <i>kala</i>
Entry form and bearer	Cognitive capacity or integrative activity in <i>chitta</i> , borne by <i>jeevan</i>	Artful making or ordering activity, borne by the embodied person; its result may be carried by an artefact or performance
Object	Remembered understanding, usefulness, and art	A form, artefact, expression, or arrangement capable of beauty and use
Counterpart	The object contemplated; users or observers become relevant in application	Material or expressive medium and those for whom it is useful
Endpoint	Available, discriminating integration of memory, usefulness, art, science, and wisdom	Beauty that remains useful
Governing criterion	Direct recognition and wisdom-aligned usefulness, not memory display alone	Conjunction of usefulness and beauty, not ornament severed from purpose

Pair semantics and limit: The definitions support a relation between a capacity that carries and recognises art and the activity of artful beautification (**I**). The two formulations of *medha* are not identical, so no single causal sequence is asserted (**O**).

C-03 - *Kanti* / *roop*

Source check: AVD, pp. 91-92; MVD, p. 329.

Field	C-03a - <i>kanti</i>	C-03b - <i>roop</i>
Source content	Light as clarity of meaning in the form of possibility	Shape, volume, and density
Entry form and bearer	Clarity or illuminating cognitive condition in <i>chitta</i> , borne by <i>jeevan</i>	Formal property or content borne by a material unit and visualised by <i>jeevan</i>
Object	Meaning and meaningful possibility	The spatial constitution of an object
Counterpart	None stated	The object whose form is considered; an observer is needed for cognition but is not part of the property
Endpoint	Clear apprehension of meaningful possibility	Accurate availability of shape, volume, and density to visualisation

Field	C-03a - <i>kanti</i>	C-03b - <i>roop</i>
Governing criterion	Clarity of meaning rather than sensory brightness or persuasive vividness	Agreement with the object's actual spatial form rather than an attractive image

Pair semantics and limit: The source pairs cognitive illumination with form as visualised content, but gives no explicit rule connecting them (O). *Roop* is treated as an object or property, not silently converted into a second private operation.

C-05 - *Santosh / shree*

Source check: AVD, pp. 91-92; MVD, p. 330.

Field	C-05a - <i>santosh</i>	C-05b - <i>shree</i>
Source content	Absence of the sentiment of lack; readiness to evidence production beyond need through science aligned with wisdom	Prosperity, or acceptance of the continuity of prosperity
Entry form and bearer	Experienced sufficiency and readiness in <i>chitta</i> , borne by <i>jeevan</i>	Accepted material-relational condition and its continuity, recognised by <i>jeevan</i>
Object	Need, sufficiency, production, and the absence of felt lack	Prosperity and its dependable continuation
Counterpart	Persons and material provision become relevant to evidence; none is stated for the inner acceptance	Persons sharing provision and the material processes sustaining it
Endpoint	Contentment grounded in understood sufficiency and its credible evidence	Stable acceptance of continuing prosperity
Governing criterion	Absence of lack joined to wisdom-governed sufficiency, not suppression of need or passive resignation	Actual and continuing prosperity, not possession, prestige, or unexamined abundance

Pair semantics and limit: The pair joins experienced contentment with accepted continuity of prosperity (I). The definition does not specify a household, property regime, quantity of surplus, or distribution rule (O).

C-06 - *Prem / ananyata*

Source check: AVD, pp. 91-92; MVD, p. 330.

Field	C-06a - <i>prem</i>	C-06b - <i>ananyata</i>
Source content	Realisation of the complete; combined expression of kindness, grace, and compassion; devotion in completeness and its continuity	Complementary activity in human mutuality and with the rest of nature; continuity of authenticity and resolution; help in awakening the unawakened
Entry form and bearer	Realised relational orientation and expression, borne by <i>jeevan</i> through the person	Complementary relational and ecological activity, borne by persons in participation
Object	Completeness and its expression through humane values	Human mutuality, nature, authenticity, resolution, and another's awakening
Counterpart	Other persons and, through completeness, the wider coexistential field	Other persons and the rest of nature are explicit counterparts
Endpoint	Continuous devotion in completeness expressed as kindness, grace, and compassion	Continuous complementarity and assistance toward awakening
Governing criterion	Realisation of completeness and the joined humane expressions, not attachment or exclusive preference	Authenticity, resolution, and complementarity, not absorption of difference or possessiveness

Pair semantics and limit: Realisation of completeness and non-other complementary participation form a coherent relation (**I**), but the text does not say that one member temporally produces the other.

C-07 - *Vatsalya / sahajta*

Source check: AVD, pp. 91-92; MVD, pp. 330-331.

Field	C-07a - <i>vatsalya</i>	C-07b - <i>sahajta</i>
Source content	Continuity of nurturing and protection for comprehensive resolution	Clarity and authenticity; integrality of behaviour, norm, thought, and realisation
Entry form and bearer	Sustained care and guidance activity, borne by a person in relationship	Condition of inner-outer congruence, borne and evidenced by the person
Object	Another's nurturing, protection, and comprehensive resolution	The person's behaviour, norm, thought, and realisation as one coherent whole

Field	C-07a - <i>vatsalya</i>	C-07b - <i>sahajta</i>
Counterpart	A person needing guidance, nurturing, or protection	No counterpart is constitutive, though relationships and conduct disclose congruence
Endpoint	Continuing protection and development toward comprehensive resolution	Clear, authentic, integrated conduct
Governing criterion	The other's comprehensive resolution, not control, dependence, or mere preservation	One-threaded congruence, not social ease, spontaneity, or polished manner

Pair semantics and limit: The pairing places sustained guidance beside effortless congruence, but the source does not state whether the second is the result, manner, or independent companion of the first (O).

C-08 - *Shraddha* / *pujyata*

Source check: AVD, pp. 91-92; MVD, p. 331.

Field	C-08a - <i>shraddha</i>	C-08b - <i>pujyata</i>
Source content	Movement toward righteousness and qualitative transformation toward completeness of conduct; continuing movement toward awakening and authenticity	Activeness for qualitative development and awakening
Entry form and bearer	Developmental orientation and movement in <i>chitta</i> , borne by <i>jeevan</i>	Developmental activeness in <i>chitta</i> , borne by <i>jeevan</i>
Object	Righteousness, conduct completeness, awakening, and authenticity	Qualitative development and awakening
Counterpart	No person or object is specified	No revered person or object is specified by the definition
Endpoint	Continuing qualitative transformation toward complete conduct	Active movement toward awakening
Governing criterion	Righteousness, authenticity, and conduct completeness, not deference or admiration	Qualitative awakening, not ritual status or another's demand for reverence

Pair semantics and limit: Both definitions name movement or activeness toward awakening (D); they do not supply a stable distinction between the two slots beyond their names and wording (O).

4. *Vritti*: sixteen remaining pairs

V-01 - *Vidya* / *pragya*

Source check: AVD, p. 92; MVD, pp. 331-332.

Field	V-01a - <i>vidya</i>	V-01b - <i>pragya</i>
Source content	Systematically knowing, believing, and accepting something as it is and for the purpose of its being	Refined human consciousness; conception of objective and relative truth, with enlightenment and realisation regarding absolute truth
Entry form and bearer	Reality-directed learning and acceptance in <i>vritti</i> , borne by <i>jeevan</i>	Refined conception and discernment in <i>vritti</i> , borne by <i>jeevan</i>
Object	Any entity or relation and its purpose	Objective, relative, and absolute truth
Counterpart	The reality to be known; teachers or interlocutors are not part of the definition	The realities or truth-levels conceived and realised
Endpoint	Systematic acceptance adequate to what the object is and why it is	Refined, differentiated conception of the truth-levels
Governing criterion	Fidelity to the object and its purpose, not information possession	Agreement with objective, relative, and absolute truth, not cleverness or inference alone

Pair semantics and limit: The pair relates systematic reality-acceptance to refined, truth-differentiating consciousness (I). The source does not define a curricular sequence between them.

V-02 - *Keerti* / *vichar*

Source check: AVD, p. 92; MVD, p. 332.

Field	V-02a - <i>keerti</i>	V-02b - <i>vichar</i>
Source content	Activeness toward awakening; authentic presentation of excellence and accessibility concerning development and awakening in the present	Activity that unfolds verity with exuberance; exposition, communication, and expression of coexistence

Field	V-02a - <i>keerti</i>	V-02b - <i>vichar</i>
Entry form and bearer	Developmental and expressive activity in <i>vrutti</i> , borne by the person	Thought joined to communication in <i>vrutti</i> , borne by <i>jeevan</i> and expressed by the person
Object	Present development, awakening, excellence, and accessibility	Verity and coexistence
Counterpart	Persons before whom the presentation is made are implied	Recipients of exposition and the reality being expressed
Endpoint	Accessible, authentic presentation that supports awakening	Verity unfolded and coexistence communicable
Governing criterion	Awakening and authenticity, not fame, prestige, or approval	Truthfulness to coexistence, not fluency or novelty

Pair semantics and limit: Both members contain activeness and presentation (**D**). Their narrower distinction - awakening-oriented repute versus truth-unfolding thought - is defensible, but a state-to-motion relation is not (**O**).

V-03 - *Nishchaya* / *dhairya*

Source check: AVD, p. 92; MVD, p. 332.

Field	V-03a - <i>nishchaya</i>	V-03b - <i>dhairya</i>
Source content	Continuity of truthful thought and movement toward goal, direction, and purpose	Continuity of just thoughts
Entry form and bearer	Stable determination in <i>vrutti</i> , borne by <i>jeevan</i>	Patient continuity in <i>vrutti</i> , borne by <i>jeevan</i>
Object	Truthful thought, goal, direction, and purpose	Justice and the thoughts required to sustain it
Counterpart	None stated; affected persons arise when decisions are expressed	Persons in relationships governed by justice are implicit in its application
Endpoint	Continuing truthful orientation toward purpose	Continuing just deliberation without abandonment
Governing criterion	Truth and intelligible purpose, not stubborn certainty	Justice, not delay, passivity, or tolerance of injustice

Pair semantics and limit: The pair presents two continuities, one governed by truth and purpose and the other by justice (**D**). No temporal or causal ordering is stated.

V-04 - *Shanti* / *daya*

Source check: AVD, p. 92; MVD, pp. 332-333.

Field	V-04a - <i>shanti</i>	V-04b - <i>daya</i>
Source content	Consequence of resolved thought; absence of opposition between desire and thought	Non-interference in another's awakening; capacity to impart content and ability according to receptivity
Entry form and bearer	Inner result and coordination in <i>uritti</i> , borne by <i>jeevan</i>	Relational restraint and assistance, borne by a person toward another
Object	Desire, thought, and resolution	Another person's development, receptivity, content, and capability
Counterpart	None stated for the inward result	The developing person is constitutive
Endpoint	Non-contradictory resolution between desire and thought	Development supported without obstruction and in proportion to receptivity
Governing criterion	Resolved thought and inner non-opposition, not quietness or conflict avoidance	The other's awakening and receptivity, not pity, intrusion, or imposed formation

Pair semantics and limit: The source pairs inward peace with other-regarding kindness but does not state their functional interface (**O**).

V-05 - *Krupa* / *karuna*

Source check: AVD, p. 92; MVD, p. 333.

Field	V-05a - <i>krupa</i>	V-05b - <i>karuna</i>
Source content	Capability to help another's awakening or acquisition of receptivity; capacity to establish receptivity appropriate to the content	Inspiring another toward awakening and helping the acquisition of ability and receptivity
Entry form and bearer	Relational capability and assistance, borne by a competent person	Motivating and enabling relational activity, borne by a helper

Field	V-05a - <i>krupa</i>	V-05b - <i>karuna</i>
Object	Another's receptivity, ability, and awakening	Another's awakening, ability, and receptivity
Counterpart	A person whose receptivity is developing	A person to be inspired and helped
Endpoint	Receptivity and ability adequate to the content	Active acquisition of ability and receptivity for awakening
Governing criterion	Fit between content and demonstrated receptivity, not favour or dependence	Actual development of the other, not emotional identification or coercive motivation

Pair semantics and limit: A capacity to provide fitting help and the activity of inspiring and helping form a close relational pair (**I**). The definitions overlap, so a strict division of labour remains open (**O**).

V-06 - *Dum* / *kshama*

Source check: AVD, p. 92; MVD, p. 333.

Field	V-06a - <i>dum</i>	V-06b - <i>kshama</i>
Source content	Ending attachment toward decline; freedom from delusion, fear, and wastefulness; dedication to awakening	Remaining unaffected by another's declining aspect while helping that person awaken
Entry form and bearer	Self-corrective activity and orientation in <i>vrutti</i> , borne by <i>jeevan</i>	Relational steadiness during assistance, borne by the helper
Object	One's own attachment, delusion, fear, wastefulness, and awakening	Another's decline and the continuing possibility of awakening
Counterpart	None stated	The person being helped is constitutive
Endpoint	Cessation of decline-oriented attachment and stable dedication to awakening	Help that remains awakening-oriented without being captured by the other's decline
Governing criterion	Liberation from delusion, fear, and waste, not suppression or rigid self-denial	Continued just assistance, not condoning harm, passivity, or superiority

Pair semantics and limit: Self-release from decline and resilience while helping another against decline are structurally related (I). The definition of forgiveness here should not be replaced by a general legal or interpersonal theory of pardon.

V-07 - *Tatparta / utsah*

Source check: AVD, p. 92; MVD, pp. 333-334.

Field	V-07a - <i>tatparta</i>	V-07b - <i>utsah</i>
Source content	Activeness in awakening, perseverance in production, dedication in humane conduct, and projection toward participation in orderliness	Intrepidity for rising and awareness of orderliness
Entry form and bearer	Cross-field readiness and perseverance in <i>vritti</i> , borne by the person	Courageous, aware disposition in <i>vritti</i> , borne by the person
Object	Awakening, productive activity, humane conduct, and participation	Uplift and orderliness
Counterpart	Co-workers and participants arise in production and orderliness	Other participants are implied by orderliness but not specified
Endpoint	Ready, sustained participation directed toward awakening and humane order	Courageous movement upward with awareness of orderliness
Governing criterion	Awakening, humaneness, and participation, not busyness or compliance	Uplift and order-awareness, not excitement, aggression, or morale alone

Pair semantics and limit: Readiness and the courage-awareness that sustains it form a plausible dispositional relation (I), but the text does not make enthusiasm the cause of readiness.

V-08 - *Kritagyata / saumyata*

Source check: AVD, p. 92; MVD, p. 334.

Field	V-08a - <i>kritagyata</i>	V-08b - <i>saumyata</i>
Source content	Acceptance of help received from anyone in development and awakening	Voluntary self-restraint; being established in the natural state as civility

Field	V-o8a - <i>kritagyata</i>	V-o8b - <i>saumyata</i>
Entry form and bearer	Relational recognition in <i>vritti</i> , borne by the recipient of help	Self-regulated civil disposition, borne by the person
Object	A contribution that aided one's development or awakening	One's own expression and conduct
Counterpart	The person or persons whose help is recognised	Others before whom civility appears are relevant but not constitutive to self-restraint
Endpoint	Accurate, continuing acknowledgement of received help	Voluntary regulation and civil establishment in one's natural state
Governing criterion	Actual contribution to advancement, not indebted submission or ceremonial thanks	Voluntariness and civility, not fear, self-erasure, or imposed docility

Pair semantics and limit: The members are paired virtues but the source states no general relation between gratitude and humility (**O**).

V-09 - *Gaurav* / *saralta*

Source check: AVD, p. 92; MVD, p. 334.

Field	V-09a - <i>gaurav</i>	V-09b - <i>saralta</i>
Source content	Unresisting acceptance of emulation	Demeanour without knots, complexity, or tension
Entry form and bearer	Orientation toward an exemplar and its emulation, borne by a person	Uncomplicated behavioural condition, borne and expressed by the person
Object	A person, quality, or conduct accepted as worthy of emulation	One's own demeanour and its inner tensions
Counterpart	An exemplar is implied but not named	Other persons encounter the demeanour, though none is specified
Endpoint	Willing adoption of what is accepted as exemplary	Straightforward, tension-free conduct

Field	V-09a - <i>gaurav</i>	V-09b - <i>saralta</i>
Governing criterion	The source does not state what makes the exemplar worthy; alignment with awakening is a broader contextual inference (O)	Absence of knots and tension, not naivety, suggestibility, or lack of discernment

Pair semantics and limit: A connection between emulation and simplicity is not supplied beyond their paired position (O). The record therefore does not turn *gaurav* into status deference.

V-10 - *Vishwas / saujanyata*

Source check: AVD, p. 92; MVD, pp. 334-335.

Field	V-10a - <i>vishwas</i>	V-10b - <i>saujanya</i>
Source content	Fulfilment of values inherent in mutuality; understanding of orderliness and communication of resolution	Collaboration, co-participation, cooperation, and complementarity
Entry form and bearer	Relational value-fulfilment and understanding, borne by persons in mutuality	Cooperative pattern and activity, borne jointly by participants
Object	Relationship, its inherent values, resolution, and orderliness	A shared purpose requiring complementary contribution
Counterpart	Another person in a recognised relationship is constitutive	Co-participants are constitutive
Endpoint	Values fulfilled in mutuality with communicable resolution	Coordinated participation in which contributions become complementary
Governing criterion	Fulfilment of recognised values, not predictability, credulity, or loyalty alone	Complementarity toward shared fulfilment, not forced coordination or mere task aggregation

Pair semantics and limit: Trust as value-fulfilment and concordance as cooperative participation form a direct relational interface (I), without specifying an organisational form.

V-11 - *Satya / dharma*

Source check: AVD, p. 92; MVD, p. 335.

Field	V-11a - <i>satya</i>	V-11b - <i>dharma</i>
Source content	What is uniformly perceivable, existent, and realisable across all times; the eternal presence of absolute, relative, and objective truth	Innateness; that from which a unit cannot be separated
Entry form and bearer	Reality-content and governing criterion rather than a separately described operation; borne by existence and realised by <i>jeevan</i>	Essential property or criterion borne inseparably by a unit and recognised by <i>jeevan</i>
Object	Existence, development, <i>jeevan</i> , awakening, and physicochemical composition-decomposition	The essential nature of any unit
Counterpart	The knower stands in relation to truth but is not its bearer	The unit whose innateness is considered
Endpoint	Accurate acceptance of what remains real across the relevant truth-levels and times	Recognition and conduct in accord with inseparable essential nature
Governing criterion	Uniform existence and realisability, not assertion, convention, or temporary appearance	Inseparability from the unit, not imposed duty or rule

Pair semantics and limit: Both slots contain objects or criteria for *vritti*, not unambiguously named mental operations (**O**). Their pairing connects truth with the innate nature by which units are understood (**I**), but the precise activity grammar remains unstated.

V-13 - *Tadatmayata* / *sahas*

Source check: AVD, p. 92; MVD, p. 336.

Field	V-13a - <i>tadatmayata</i>	V-13b - <i>sahas</i>
Source content	Decision made with acceptance toward eternalness	Work and behaviour performed happily with endurance
Entry form and bearer	Definite decision and identification in <i>vritti</i> , borne by <i>jeevan</i>	Courageous embodied conduct, borne by the person
Object	Eternalness and the decision made in its light	A task or relationship requiring endurance
Counterpart	None stated for the decision	Persons and material conditions implicated by the work or behaviour

Field	V-13a - <i>tadatmayata</i>	V-13b - <i>sahas</i>
Endpoint	Stable decision consonant with what is accepted as eternal	Sustained, cheerful conduct through difficulty
Governing criterion	Accepted eternalness, not fusion, conformity, or intensity of identification	Endurance with happiness in humane work and behaviour, not risk-seeking or domination

Pair semantics and limit: Inner decision toward eternalness and its possible expression in enduring conduct form a plausible interface (I). The text does not state that all courageous acts evidence *tadatmayata*.

V-14 - *Samyama* / *niyam*

Source check: AVD, p. 92; MVD, pp. 336-337.

Field	V-14a - <i>samyama</i>	V-14b - <i>niyam</i>
Source content	Being regulated in humane thought, behaviour, and vocation	Tendency and evidence of participating in the overall orderliness through spontaneous self-regulation
Entry form and bearer	Self-regulated condition across human activity, borne by the person	Outward participatory tendency and evidence, borne by the self-regulated person
Object	Thought, relationship-conduct, and vocation	The immediate and overall orderliness
Counterpart	Persons and material processes affected by behaviour and vocation	Co-participants in orderliness are constitutive to participation
Endpoint	Humane regulation across thought, conduct, and work	Self-directed participation in the whole order
Governing criterion	Humaneness, not repression, austerity, or external control	Spontaneous self-regulation and whole participation, not rule compliance alone

Pair semantics and limit: The definitions support a held self-regulation and its participatory evidence (I). *Niyam* here should not be reduced to enacted law or administrative regulation.

V-15 - *Veerta* / *dheerta*

Source check: AVD, p. 92; MVD, p. 337.

Field	V-15a - <i>veerta</i>	V-15b - <i>dheerta</i>
Source content	Deployment of one's physical and intellectual powers to make justice available to others	Dedication and firmness toward justice
Entry form and bearer	Relational and embodied intervention, borne by a capable person	Stable justice-orientation in <i>vrutti</i> , borne by <i>jeevan</i>
Object	Another person's access to justice and the obstacles to it	Justice and continuity of commitment to it
Counterpart	The person needing justice and those whose conduct or conditions obstruct it	Persons affected by the sustained commitment to justice
Endpoint	Effective availability of justice to another	Firm, continuing dedication to justice
Governing criterion	Justice for the other, not victory, force, loyalty, or display of power	Justice, not rigidity, factional persistence, or endurance for its own sake

Pair semantics and limit: The pair joins deployed capability with the firmness that sustains justice (**I**), while reversing any simple assumption that *bal* is inwardly static and *shakti* outwardly active.

V-16 - *Bhav* / *samveg*

Source check: AVD, p. 92; MVD, p. 337.

Field	V-16a - <i>bhav</i>	V-16b - <i>samveg</i>
Source content	Essentiality equated with value, responsibility, and participation	Momentum acquired from meaningful conjunction
Entry form and bearer	Recognised essentiality and value-orientation, borne by <i>jeevan</i> and enacted by persons	Resultant impetus or motion, borne by a person or process arising in conjunction
Object	A unit's essentiality and the responsibility and participation it calls for	The conjunction from which motion is obtained
Counterpart	Units or persons whose value establishes responsibility	The other unit, person, or condition participating in the conjunction

Field	V-16a - <i>bhav</i>	V-16b - <i>samveg</i>
Endpoint	Essentiality recognised as value and carried as responsibility and participation	Effective motion arising from a meaningful joining
Governing criterion	The actual essentiality and value of the related unit, not sentiment intensity	Meaningful conjunction, not arousal, crowd momentum, or compulsion

Pair semantics and limit: Value-responsibility and conjunction-derived impetus may connect orientation with mobilised participation (**I**), but the definition does not identify which conjunction or direction makes the momentum correct (**O**).

V-17 - *Jati / kaal*

Source check: AVD, p. 92; MVD, p. 337.

Field	V-17a - <i>jati</i>	V-17b - <i>kaal</i>
Source content	Uniqueness of form, properties, essential nature, and <i>dharma</i> ; similarity and diversity in physical aspects	Duration of activity
Entry form and bearer	Classificatory content or property borne by physical and other units, discriminated by <i>jeevan</i>	Temporal property borne by an activity or process, discriminated by <i>jeevan</i>
Object	The configuration and kind of a unit, including material composition	The beginning, continuation, and duration of an activity
Counterpart	The unit or class being distinguished	The activity being timed
Endpoint	Accurate discrimination of unity, diversity, and kind	Accurate discrimination of duration
Governing criterion	Actual differences and commonalities of form, property, nature, and <i>dharma</i> , not social rank or inherited classification	The activity's actual duration, not subjective impatience or scheduling convention alone

Pair semantics and limit: These slots name dimensions of what is analysed rather than two clearly specified operations (**O**). The source gives no rule explaining why kind and duration form one pair.

5. *Mun*: twenty-nine remaining pairs

M-01 - *Bhakti* / *tanmayata*

Source check: AVD, pp. 92-94; MVD, p. 338.

Field	M-01a - <i>bhakti</i>	M-01b - <i>tanmayata</i>
Source content	Activity of becoming free from fear and delusion; expression, communication, and exposition combining prayer and service; total dedication	Immersion in the effect of awakening through direction toward a definite goal with complete dedication
Entry form and bearer	Awakened orientation and expressive practice in <i>mun</i> , borne by the person	Focused receptive condition in <i>mun</i> , borne by <i>jeevan</i>
Object	Freedom from delusion, awakening, dedication, prayer, and service	The effect of awakening, definite goal, and direction
Counterpart	Persons served and recipients of communication may be involved; none is fixed by the definition	A guide or source of direction is implied but not identified as a necessary office
Endpoint	Fearless, delusion-free total dedication expressed in service	Focused immersion directed toward awakening
Governing criterion	Freedom from delusion and service joined to awakening, not submission, ritual repetition, or fear	Definite awakened goal and direction, not absorption, charisma, or loss of judgement

Pair semantics and limit: Devotion and immersion share complete dedication toward awakening (I). The definition does not authorise identification of devotion with obedience to a person or organisation.

M-02 - *Mamta* / *udarta*

Source check: AVD, pp. 92-94; MVD, pp. 338-339.

Field	M-02a - <i>mamta</i>	M-02b - <i>udarta</i>
Source content	Nurturing and protection at the pinnacle of affinity; acceptance of the other as an image of oneself and continuation of that acceptance	Joyful offering of body, mind, and material means as needed for another's awakening, health, and prosperity; right use of one's resolution and prosperity for others

Field	M-02a - <i>mamta</i>	M-02b - <i>udarta</i>
Entry form and bearer	Close relational care and acceptance, borne by a person toward another	Relational and material giving activity, borne by a person with available capability and means
Object	Another's nurturing, protection, affinity, and continuity	Another's awakening, bodily health, prosperity, and actual need
Counterpart	The person cared for is constitutive	The recipient or affected persons are constitutive; material means also participate
Endpoint	Continuing care in which the other is protected without being treated as alien	Needed capabilities and means made available for the other's awakening, health, and prosperity
Governing criterion	Actual nurturing and protection with affinity, not possession, indulgence, or control	Need and right use for the other's threefold development, not display, patronage, or indiscriminate giving

Pair semantics and limit: Affinitive care and the wider offering of capability and means form a relation of care and generous provision (I). The definitions do not limit the counterpart to a particular kinship form.

M-03 - *Samman* / *sauhardta*

Source check: AVD, pp. 92-94; MVD, p. 339. The Hindi definition of *sauhardta* names *shruti*; the English source mistranslates it once as direct recognition.

Field	M-03a - <i>samman</i>	M-03b - <i>sauhardta</i>
Source content	Acceptance of personality and talent, including their excellence, balanced exposition, continuity, and clarity	Presenting conception, realisation, memory, and realised articulation exactly as accepted
Entry form and bearer	Relational recognition and balanced expression in <i>mun</i> , borne by a person toward another	Faithful communicative activity in <i>mun</i> , borne by the speaker
Object	Another person's personality, talent, and excellence	One's accepted conception, realisation, memory, and <i>shruti</i>
Counterpart	The respected person is constitutive	A recipient of the presentation is implied
Endpoint	Clear and balanced recognition of another's personality and talent	Accepted understanding presented without alteration

Field	M-03a - <i>samman</i>	M-03b - <i>sauhardta</i>
Governing criterion	Actual personality and talent with balanced acknowledgement, not rank, flattery, or prestige	Fidelity to what is accepted, not agreeableness, selective reporting, or verbal warmth alone

Pair semantics and limit: The source pairs recognition of the other with faithful presentation of one's accepted content, suggesting transparent mutual regard (**I**). It does not state a uniform causal relation (**O**).

M-04 - *Sneha / nishtha*

Source check: AVD, pp. 92-94; MVD, pp. 339-340.

Field	M-04a - <i>sneha</i>	M-04b - <i>nishtha</i>
Source content	Absence of resistance in just behaviour; voluntary meeting in, through, and for satisfaction, with continuity	Continuous endeavour to attain and evidence the goal of complete awakening with definite conception and remembrance
Entry form and bearer	Relational affection and readiness for just meeting, borne by persons in mutuality	Sustained goal-directed orientation and activity in <i>mun</i> , borne by the person
Object	Just conduct, mutual meeting, and satisfaction	Complete awakening, its conception, remembrance, attainment, and evidence
Counterpart	Another person in just relationship is constitutive	Other persons and fields of conduct become relevant to evidence, though no one counterpart is stated
Endpoint	Continuing, voluntary mutuality without resistance to justice	Attainment and evidence of awakening through sustained commitment
Governing criterion	Justice and mutual satisfaction, not attachment, favouritism, or aversion to disagreement	Complete awakening and evidence, not loyalty to a leader, slogan, or role

Pair semantics and limit: Affection in just mutuality and dedication to awakened evidence are compatible orientations, but their exact pair relation is not stated (**O**).

M-05 - *Putra-putri / anurag*

Source check: AVD, pp. 92-94; MVD, p. 340. The detailed *putra-putri* passage is syntactically irregular: its first Hindi clause ends by naming the father, and subsequent clauses describe recognition of parental contributions.

Field	M-05a - <i>putra-putri</i>	M-05b - <i>anurag</i>
Source content	Son-daughter role understood through acceptance of parents as causes of bodily formation and providers of nurturing, protection, productive capability, education- <i>sanskar</i> , and knowledge	Immersion obtained without delusion; success in fulfilling values inherent in relationships
Entry form and bearer	Child role and relational recognition, borne by a son or daughter toward parents	Relational success and devoted orientation in <i>mun</i> , borne by a person
Object	Generation, parental complementarity, nurturing, protection, capability, education, and knowledge	Relationships and their inherent values
Counterpart	Parent or parents are constitutive	Persons in recognised relationships are constitutive
Endpoint	Accurate recognition and fulfilment of the child-parent relationship	Successful fulfilment of relational values without delusion
Governing criterion	Actual generation and complementary provision, not filial obedience or inherited authority alone	Recognised values and their fulfilment, not emotional intensity, attachment, or exclusivity

Pair semantics and limit: A named child-parent relation and success in fulfilling relationship-values form a plausible role-to-value relation (I). The mixed syntax prevents a stronger allocation of every parental responsibility to this member (O).

M-06 - *Sathi / dayitva*

Source check: AVD, pp. 92-94; MVD, pp. 340-341. AVD and translations vary among *swami*, master, and *sathi*, companion; the detailed heading and definition use *sathi* while the English rendering says “master.”

Field	M-06a - <i>sathi</i>	M-06b - <i>dayitva</i>
Source content	A comprehensively resolved person in the seer status who knows the self and fulfils relationships	Civilised conduct with realised values in relationships of behaviour, vocation, and orderliness
Entry form and bearer	Person-role defined by resolved knowing and relationship-fulfilment	Responsibility-bearing relational conduct, borne by the person

Field	M-06a - <i>sathi</i>	M-06b - <i>dayitva</i>
Object	Self-knowledge, comprehensive resolution, and relationships	Values in interpersonal conduct, vocation, and participation in orderliness
Counterpart	Companions or other persons in fulfilled relationships are constitutive to the role	Persons and processes affected in all three relational fields
Endpoint	Companionship or guidance grounded in self-knowledge and fulfilled relationship	Civilised conduct expressing realised values across relationships and work
Governing criterion	Comprehensive resolution and actual fulfilment, not title, authority, possession, or dependency	Realised value and civility, not assigned obligation or compliance alone

Pair semantics and limit: The pair places an evidence-bearing relational person-role beside responsible conduct (**I**). The lexical variant prevents deriving a fixed authority relation from the name (**O**).

M-07 - *Sahyogi* / *kartavya*

Source check: AVD, pp. 92-94; MVD, p. 341.

Field	M-07a - <i>sahyogi</i>	M-07b - <i>kartavya</i>
Source content	One who follows a propounder, guide, or motivator with acceptance for comprehensive resolution and helps in production	Fulfilment of values inherent in relationships and associations at every level
Entry form and bearer	Cooperative participant-role, borne by a person	Responsibility-in-action across relations, borne by a person
Object	Comprehensive resolution, guidance, joint movement, and productive contribution	Relationships, associations, and their inherent values
Counterpart	Guide, co-workers, and those benefiting from production	Every person related or associated at the relevant level
Endpoint	Competent cooperation in resolution and production	Fulfilment of the values of each recognised relationship and association

Field	M-07a - <i>sahyogi</i>	M-07b - <i>kartavya</i>
Governing criterion	Accepted purpose and useful cooperation, not subordination, imitation, or labour extraction	Inherent relationship-values, not externally assigned tasks or role obedience alone

Pair semantics and limit: A cooperative role and the value-fulfilling duties arising in relationships connect participation with responsibility (I). The source does not define permanent hierarchy or organisational rank.

M-09 - *Hita / svasthya*

Source check: AVD, pp. 92-94; MVD, pp. 341-342.

Field	M-09a - <i>hita</i>	M-09b - <i>svasthya</i>
Source content	Usefulness within the purview or boundary of the body	State in which cognitive and work organs can function according to <i>mun</i> and tendencies; an exuberant functional state
Entry form and bearer	Usefulness criterion or body-relative condition, borne by an object, action, or arrangement in relation to the body	Bodily capability state, borne by the human body and recognised by <i>jeevan</i>
Object	What supports bodily use within bodily limits	Cognitive organs, work organs, and their responsive functioning
Counterpart	The body is the reference counterpart for usefulness	<i>Jeevan</i> as director through <i>mun</i> and tendencies; organs are the bodily bearers
Endpoint	Body-conducive usefulness without exceeding bodily purpose	Bodily organs available for intended sensing and work
Governing criterion	Bodily usefulness and limit, not desirability, profit, or maximal performance	Functional responsiveness to <i>mun</i> under bodily well-being, not appearance or output alone

Pair semantics and limit: Body-relative usefulness and bodily functional availability form a direct condition-capability relation (I). Neither definition supplies a complete theory of health or treatment.

M-10 - *Priya / pravrittiyan*

Source check: AVD, pp. 92-94; MVD, p. 342.

Field	M-10a - <i>priya</i>	M-10b - <i>pravrittiyan</i>
Source content	Conducive conjunction for the five cognitive organs - sound, touch, sight, taste, and smell - with respect to bodily wellness	Intellectual impetus for accomplishment and purpose; hope, thought, desire, resolve, and authenticity in <i>jeevan</i> for projection; humane mentality in behaviour
Entry form and bearer	Sensory-bodily relation or condition, borne jointly by body and contacted environment	Inner dispositional complex and projective readiness in <i>jeevan</i>
Object	Sensory contact and bodily wellness	Accomplishment, purpose, projection, and humane behaviour
Counterpart	Material qualities contacting the cognitive organs	Fields and persons toward which the tendencies are projected; none is fixed
Endpoint	Sensory conjunction conducive to bodily wellness	Humane, purpose-directed projection through the outer faculties
Governing criterion	Bodily wellness, not pleasant sensation alone	Purpose fulfilment and humaneness, not impulse strength, habit, or social conditioning

Pair semantics and limit: The source pairs bodily-sensory conduciveness with the tendencies through which *jeevan* projects, but supplies no narrower interface (**O**). The record therefore does not infer that pleasantness selects or causes the tendencies.

M-11 - *Ullas* / *haas*

Source check: AVD, pp. 92-94; MVD, p. 342. The Hindi line appears as *hras* while its definition and English rendering concern joyousness or merriness; the tabulated assignment governs the retained name *haas*.

Field	M-11a - <i>ullas</i>	M-11b - <i>haas</i>
Source content	Articulation and transparent presentation and movement toward rising	Movement toward humane goal and direction with resolution, joyousness, and a smile
Entry form and bearer	Transparent expressive activity and uplifted orientation, borne by the person	Joyous embodied expression and movement, borne by the person
Object	Uplift and transparent presentation	Humane goal, direction, resolution, and joy

Field	M-11a - <i>ullas</i>	M-11b - <i>haas</i>
Counterpart	Recipients of presentation may be involved but are not specified	Other persons may witness or share the expression; none is required by the wording
Endpoint	Transparent articulation that moves toward uplift	Joyful movement under resolution toward a humane goal
Governing criterion	Uplift and transparency, not stimulation, performance, or exaggerated positivity	Resolution and humane direction, not amusement, laughter, or mood alone

Pair semantics and limit: Both members concern the expression and motion of resolved uplift (I). The naming irregularity and semantic overlap prevent a sharper division (O).

M-12 - *Sheel* / *sankoch*

Source check: AVD, pp. 92-94; MVD, pp. 342-343.

Field	M-12a - <i>sheel</i>	M-12b - <i>sankoch</i>
Source content	Identifying and indicating the grandeur of awakening in all aspects with authenticity as civility; civilised characteristics	Presenting disagreement or non-acceptance civilly
Entry form and bearer	Civil, authenticity-bearing manner and recognition, borne by the person	Relational communicative act, borne by a disagreeing person
Object	Awakening, authenticity, and their civil expression across contexts	A proposition, action, or expectation that is not accepted
Counterpart	Persons before whom civil authenticity is indicated	The person or group to whom disagreement is expressed is constitutive
Endpoint	Awakening made recognisable through civil, authentic conduct	Disagreement communicated without abandoning civility
Governing criterion	Authenticity and awakening, not etiquette, modest self-presentation, or status-coded manners	Clarity and civility together, not silence, timidity, concealment, or hostility

Pair semantics and limit: General civil authenticity and its difficult case - civil disagreement - form a credible relation (I). Neither member entails deference or suppression of dissent.

M-14 - *Shishya / jigyasu*

Source check: AVD, pp. 92-94; MVD, pp. 343-344.

Field	M-14a - <i>shishya</i>	M-14b - <i>jigyasu</i>
Source content	Person ready to receive and accept education- <i>sanskar</i> for awakening and in whom the relationship with a <i>guru</i> is accepted	Expression of intense desire to receive delusion-free education with knowledge of <i>jeevan</i>
Entry form and bearer	Learner-role and receptivity, borne by a person in an accepted teaching relationship	Inquiry-orientation and communicative expression, borne by the learner or questioner
Object	Education- <i>sanskar</i> , awakening, and the teaching relationship	Delusion-free education and knowledge of <i>jeevan</i>
Counterpart	The <i>guru</i> is explicitly the relational counterpart	A knowledgeable interlocutor or teacher is implied by the desire to receive education
Endpoint	Receptive participation in education directed toward awakening	Inquiry made active and explicit toward delusion-free knowledge
Governing criterion	Awakening-directed acceptance with inquiry, not submission, credential status, or dependence	Knowledge of <i>jeevan</i> and freedom from delusion, not curiosity intensity or question-asking alone

Pair semantics and limit: An accepted learner-role and active inquiry are complementary aspects of receptivity (I). The pair does not establish unilateral teaching authority or the truth of a teacher's claim by role.

M-15 - *Bhai-mitra / pragati*

Source check: AVD, pp. 92-94; MVD, p. 344.

Field	M-15a - <i>bhai-mitra</i>	M-15b - <i>pragati</i>
Source content	Brother by common womb, or a person accepted like a brother or sibling as friend	Participation in the overall orderliness of humaneness; expectation, process, and evidence of resolution and prosperity with emphasis on resolution
Entry form and bearer	Kinship or friendship role and acceptance, borne reciprocally by persons	Developmental participation and evidence, borne by persons in a wider order

Field	M-15a - <i>bhai-mitra</i>	M-15b - <i>pragati</i>
Object	Siblinghood, brother-like acceptance, and friendship	Human orderliness, resolution, prosperity, and participation
Counterpart	Brother, sibling-like friend, or reciprocally accepted companion	Other participants and the shared order are constitutive
Endpoint	Stable sibling-like acceptance in relationship	Participation that advances resolution while including prosperity
Governing criterion	Actual brother-like acceptance and its relationship-values, not biological relation, alliance, or in-group loyalty alone	Resolution-first evidence in the whole order, not growth, rank, output, or expansion alone

Pair semantics and limit: A close horizontal relation is paired with resolution-centred progress in wider participation, but the source does not explain the pairing (**O**). No institutional conclusion is coded.

M-16 - *Bahan / unnati*

Source check: AVD, pp. 92-94; MVD, p. 344.

Field	M-16a - <i>bahan</i>	M-16b - <i>unnati</i>
Source content	Sister by common womb or sister-like acceptance	Expectation, process, and evidence of resolution and prosperity with emphasis on prosperity; movement toward awakening and its continuity
Entry form and bearer	Kinship or sister-like relational role, borne reciprocally by persons	Developmental movement and evidential process, borne by persons in participation
Object	Siblinghood and sister-like acceptance	Prosperity, resolution, awakening, and continuity
Counterpart	Sister, sibling, or a person accepted in sister-like relation	Other participants, productive-material processes, and fields of evidence
Endpoint	Stable sister-like acceptance and value-fulfilment	Prosperity-centred advancement that remains joined to resolution and awakening
Governing criterion	Actual relationship and its values, not biological fact, gendered duty, or symbolic honour alone	Evidence of prosperity with resolution and awakening, not accumulation or upward mobility alone

Pair semantics and limit: A close sibling relation is paired with prosperity-centred advancement, but the functional interface is not stated (**O**). The definition does not prescribe a gendered division of work.

M-17 - *Sweekruti* / *swagat*

Source check: AVD, pp. 92-94; MVD, pp. 344-345. The *bal* definition itself uses the language of projection and evidencing, so the column assignment cannot be reconstructed from a static-versus-dynamic gloss.

Field	M-17a - <i>sweekruti</i>	M-17b - <i>swagat</i>
Source content	Evidencing in projection all signals received through realisation-based influence	Acceptance and preparation for evidencing conception and realisation; readiness concerning law, justice, resolution, truth, and science aligned with wisdom
Entry form and bearer	Accepted-content-to-evidence activity in <i>mun</i> , borne by <i>jeevan</i> and expressed by the person	Preparatory readiness in <i>mun</i> , borne by <i>jeevan</i>
Object	Signals indicated through realisation-based effect and their faithful projection	Conception, realisation, law, justice, resolution, truth, and aligned hope, thought, and desire
Counterpart	Recipients and fields of evidence are implied but not specified	Later recipients and fields of evidence are anticipated but not constitutive to preparation
Endpoint	Received content faithfully evidenced in projection	Mental, intellectual, and volitional readiness for that evidence
Governing criterion	Fidelity to all received signals, not selective expression, assent, or confidence	Readiness under law, justice, resolution, truth, wisdom, and science, not welcome, hospitality, or receptiveness to any content

Pair semantics and limit: The definitions support accepted content in evidential projection beside preparation for such evidence (**I**). Their order does not match a simple held-state/outward-motion schema, and the exact distinction remains partly open (**O**).

M-18 - *Ruchi* / *pehchan*

Source check: AVD, pp. 92-94; MVD, p. 345.

Field	M-18a - <i>ruchi</i>	M-18b - <i>pehchan</i>
Source content	Recognition of results obtained when conducive physicochemical things contact the senses	Identification of necessary elements in sensory contact and acceptance of the total result of conjunction
Entry form and bearer	Sensory-result recognition in <i>mun</i> , borne by the embodied person	Discriminating and accepting activity in <i>mun</i> , borne by the embodied person
Object	Result of contact between senses and conducive physicochemical objects	Necessary elements and the total result of material conjunction
Counterpart	Sense organs and contacted material objects are constitutive	Sense organs, material units, and their conjunction are constitutive
Endpoint	Conductive contact-result recognised as such	Constituent requirements and total result accurately identified and accepted
Governing criterion	Actual result and bodily-material conduciveness, not preference, familiarity, or attraction alone	Necessary elements and whole consequence, not naming, categorisation, or partial sensory impression alone

Pair semantics and limit: The definitions overlap in recognition of a sensory-material result; the second makes elements and total conjunction explicit (I). A sharper taste-versus-selection distinction is not stated (O).

M-19 - *Sukh* / *sfoorti*

Source check: AVD, pp. 92-94; MVD, p. 345.

Field	M-19a - <i>sukh</i>	M-19b - <i>sfoorti</i>
Source content	Resolution	Tendency in, through, and for evidence of resolution
Entry form and bearer	Resolved inner condition in <i>mun</i> , borne by <i>jeevan</i>	Motivating tendency toward evidence, borne by <i>jeevan</i> and projected through the person
Object	The resolved answer or condition	Evidence of resolution and activity directed by it
Counterpart	None stated for the inner condition	Persons, work, or situations in which evidence occurs are implied, not fixed

Field	M-19a - <i>sukh</i>	M-19b - <i>sfoorti</i>
Endpoint	Definite resolution experienced as happiness	Movement that expresses and extends evidence of resolution
Governing criterion	Resolution, not sensation, comfort, pleasure, or favourable circumstance	Evidence of resolution, not energy, productivity, stimulation, or mood alone

Pair semantics and limit: This is a relatively direct resolved-condition and evidential-tendency pairing (I). The brief definitions do not specify the domain in which resolution is to be evidenced.

M-20 - *Pati-patni* / *yatitva-satitva*

Source check: AVD, pp. 92-94; MVD, pp. 345-346. The detailed passage names the spousal relation but defines the right-hand slot at length; it does not separately define the values or endpoint of the spousal role.

Field	M-20a - <i>pati-patni</i>	M-20b - <i>yatitva-satitva</i>
Source content	Husband-wife or spousal relationship	Work, behaviour, understanding, process, and endeavour undertaken through researchful effort and truth-oriented resolve for freedom from delusion, awakening, and its continuity
Entry form and bearer	Named reciprocal relationship and person-roles	Compound discipline of effort and steadfastness, borne by persons through conduct
Object	The spousal relationship	Freedom from delusion, awakening, understanding, work, and behaviour
Counterpart	Spouses are reciprocal counterparts	Persons and material fields involved in work and behaviour; the definition does not limit the practice to spouses
Endpoint	Recognition and fulfilment of the spousal relation; its specific values are not defined here (O)	Continued awakening through inquiry, effort, resolve, and truthful conduct
Governing criterion	The source supplies the relationship name but no local criterion; values should not be imported without a separate textual argument (O)	Researchful understanding, resolve, freedom from delusion, and continuity of awakening, not endurance of domination or conformity to a marital role

Pair semantics and limit: The source pairs a spousal relation with disciplined work and conduct for awakening, but does not explain whether the discipline is the relation's value, evidence, or an independent companion (**O**). No marriage form or authority rule follows at Pass One.

M-21 - *Mata* / *poshan*

Source check: AVD, pp. 92-94; MVD, p. 346. The MVD prose treats mother and father together before defining *poshan*.

Field	M-21a - <i>mata</i>	M-21b - <i>poshan</i>
Source content	Acceptance of having given birth and being complementary for awakening, including nurturing, protection, productive capability, education- <i>sanskar</i> , and provision of knowledge	A unit joined with a conducive unit
Entry form and bearer	Parent-role, generative recognition, and care responsibility, borne by the person occupying the mother relation	Conductive relation or condition borne by the conjunction of units
Object	Child's body, awakening, care, capability, education, and knowledge	Any unit's need for a conducive counterpart, including bodily and relational care in this pair
Counterpart	Child or children are constitutive	The unit needing support and the conducive unit are jointly constitutive
Endpoint	Generative and developmental complementarity toward the child's bodily capability and awakening	A conjunction that supports rather than depletes the receiving unit
Governing criterion	Actual generative relation and complementarity for awakening, not title, sacrifice, control, or gendered exclusivity	Conduciveness to the unit, not supply, proximity, consumption, or intention alone

Pair semantics and limit: A named caregiving relation is paired with the general structure of nurturing as conducive conjunction (**I**). The shared mother-father wording prevents assigning every listed responsibility exclusively to the mother (**O**).

M-22 - *Pita* / *sanrakshan*

Source check: AVD, pp. 92-94; MVD, p. 346. The parent-role clauses are shared with the preceding passage; *sanrakshan* is separately defined.

Field	M-22a - <i>pita</i>	M-22b - <i>sanrakshan</i>
Source content	Acceptance of nurturing and protection in the father relation, within the shared parental account of generation, awakening, capability, education, and knowledge	Removal of obstacles for unobstructedness and ease
Entry form and bearer	Parent-role and accepted responsibility, borne by the person occupying the father relation	Protective activity or resulting affordance, borne by a responsible actor and experienced in the protected field
Object	Child's nurturing, safety, capability, and awakening	Obstacles that prevent safe or easy continuation of a valid activity
Counterpart	Child or children are constitutive	The person, activity, or process protected from obstruction
Endpoint	Continuing parental complementarity for the child's well-being and awakening	Valid activity made unobstructed and practicable
Governing criterion	Actual nurturing and protection toward capability and awakening, not authority, provision alone, or patriarchal status	Removal of relevant obstacles, not insulation from correction, dissent, consequence, or all difficulty

Pair semantics and limit: A named protective parent-role and protection as removal of obstacles form a direct role-function relation (I). The text does not establish exclusive paternal control or a fixed parental division of labour.

M-23 - *Mridu-kathor* / *vahan-samvahan*

Source check: AVD, pp. 93-94; MVD, pp. 346-347. The detailed wording interweaves softness, hardness, bearing, and contraction rather than defining four terms separately.

Field	M-23a - <i>mridu-kathor</i>	M-23b - <i>vahan-samvahan</i>
Source content	Objects that bear less or more weight or pressure in touch	Bearing or shared-bearing response, including objects that carry by contraction; the terms are not separately resolved
Entry form and bearer	Tactile-mechanical qualities borne by material objects and sensed through the body	Material response, capacity, or bodily correlate borne by an object under load
Object	Weight, pressure, touch, and deformation	Carrying, contraction, and transmission of load or motion

Field	M-23a - <i>mridu-kathor</i>	M-23b - <i>vahan-samvahan</i>
Counterpart	A touching body, tool, or load and the material object	The load, touching body, and bearing material
Endpoint	Accurate discrimination of softness and hardness for competent bodily-material contact	Safe and intelligible bearing or transmission under contact
Governing criterion	Actual response to weight and pressure, not verbal labels or comfort preference	Actual carrying and deformation response, not presumed strength or surface appearance

Pair semantics and limit: The pair concerns tactile quality and bearing behaviour (I), but MVD's compound syntax does not establish a one-to-one mapping among its subterms (O).

M-25 - *Khatta / poshan*

Source check: AVD, pp. 93-94; MVD, p. 347. The AVD table assigns *poshan* to the *shakti* column; the MVD definition presents sour through the recurring *poshan/shoshan* contrast without a separate second activity.

Field	M-25a - <i>khatta</i>	M-25b - <i>poshan</i>
Source content	Sour taste recognised through tongue-contact with a material object	Nourishing rather than depleting conjunction: a unit joined with a conducive unit
Entry form and bearer	Sensory quality borne by a physicochemical object and experienced through the tongue-body- <i>jeevan</i> relation	Repeated criterion, condition, or disputed activity slot borne by a conducive unit-relation
Object	The result of tongue-contact with sour material	The bodily-material consequence of that contact
Counterpart	Tongue, body, and tasted object are constitutive	Receiving unit and conducive or unconductive material unit
Endpoint	Accurate discrimination of sour contact for bodily health	Conjunction that supports the receiving unit
Governing criterion	Actual sensory quality assessed in relation to bodily health, not liking or cultural preference	Conduciveness rather than depletion, not sweetness, quantity, or immediate pleasure

Pair semantics and limit: The sensory quality is assessed under a nourishing/depleting criterion (I). It is unresolved whether this *poshan* is one of six distinct activities, one re-

peated activity, or tabular shorthand (**O**).

M-26 - *Meetha* / *poshan*

Source check: AVD, pp. 93-94; MVD, p. 347. The same column-definition mismatch as M-25 applies.

Field	M-26a - <i>meetha</i>	M-26b - <i>poshan</i>
Source content	Sweet taste recognised through tongue-contact with a material object	Nourishing rather than depleting conjunction: a unit joined with a conducive unit
Entry form and bearer	Sensory quality borne by a physicochemical object and experienced through the tongue-body- <i>jeevan</i> relation	Repeated criterion, condition, or disputed activity slot borne by a conducive unit-relation
Object	The result of tongue-contact with sweet material	The bodily-material consequence of that contact
Counterpart	Tongue, body, and tasted object are constitutive	Receiving unit and conducive or unconductive material unit
Endpoint	Accurate discrimination of sweet contact for bodily health	Conjunction that supports the receiving unit
Governing criterion	Actual sensory quality assessed in relation to bodily health, not pleasure or craving	Conduciveness rather than depletion, not sweetness itself, quantity, or immediate reward

Pair semantics and limit: Sweetness does not equal nourishment; the pair places a sensory quality under a conducive/depleting assessment (**I**). The repeated-slot status of *poshan* remains **O**.

M-27 - *Chirchira-charpara* / *poshan*

Source check: AVD, pp. 93-94; MVD, p. 347. The AVD table gives *chirchira* and the MVD heading gives *charpara*. Both are retained as a lexical variant for pungency.

Field	M-27a - <i>chirchira-charpara</i>	M-27b - <i>poshan</i>
Source content	Pungent taste recognised through tongue-contact with a material object	Nourishing rather than depleting conjunction: a unit joined with a conducive unit
Entry form and bearer	Sensory quality borne by a physicochemical object and experienced through the tongue-body- <i>jeevan</i> relation	Repeated criterion, condition, or disputed activity slot borne by a conducive unit-relation

Field	M-27a - <i>chirchira-charpara</i>	M-27b - <i>poshan</i>
Object	The result of tongue-contact with pungent material	The bodily-material consequence of that contact
Counterpart	Tongue, body, and tasted object are constitutive	Receiving unit and conducive or unconductive material unit
Endpoint	Accurate discrimination of pungent contact for bodily health	Conjunction that supports the receiving unit
Governing criterion	Actual sensory quality assessed in relation to bodily health, not intensity or preference	Conduciveness rather than depletion, not stimulation or aversion

Pair semantics and limit: The member-name variant and the recurring *poshan* slot are documentary facts; the nourishing/depleting assessment is the narrowest functional relation (I/O).

M-28 - *Kadua* / *poshan*

Source check: AVD, pp. 93-94; MVD, p. 347. The same column-definition mismatch as M-25 applies.

Field	M-28a - <i>kadua</i>	M-28b - <i>poshan</i>
Source content	Bitter taste recognised through tongue-contact with a material object	Nourishing rather than depleting conjunction: a unit joined with a conducive unit
Entry form and bearer	Sensory quality borne by a physicochemical object and experienced through the tongue-body- <i>jeevan</i> relation	Repeated criterion, condition, or disputed activity slot borne by a conducive unit-relation
Object	The result of tongue-contact with bitter material	The bodily-material consequence of that contact
Counterpart	Tongue, body, and tasted object are constitutive	Receiving unit and conducive or unconductive material unit
Endpoint	Accurate discrimination of bitter contact for bodily health	Conjunction that supports the receiving unit
Governing criterion	Actual sensory quality assessed in relation to bodily health, not aversion	Conduciveness rather than depletion, not pleasantness or avoidance

Pair semantics and limit: Bitterness does not equal depletion; it is a sensory quality whose consequence must be assessed (I). The ontological status of the repeated *poshan* record remains O.

M-29 - *Kasaila* / *poshan*

Source check: AVD, pp. 93-94; MVD, p. 347. The same column-definition mismatch as M-25 applies.

Field	M-29a - <i>kasaila</i>	M-29b - <i>poshan</i>
Source content	Astringent taste recognised through tongue-contact with a material object	Nourishing rather than depleting conjunction: a unit joined with a conducive unit
Entry form and bearer	Sensory quality borne by a physicochemical object and experienced through the tongue-body- <i>jeevan</i> relation	Repeated criterion, condition, or disputed activity slot borne by a conducive unit-relation
Object	The result of tongue-contact with astringent material	The bodily-material consequence of that contact
Counterpart	Tongue, body, and tasted object are constitutive	Receiving unit and conducive or unconductive material unit
Endpoint	Accurate discrimination of astringent contact for bodily health	Conjunction that supports the receiving unit
Governing criterion	Actual sensory quality assessed in relation to bodily health, not preference or intensity	Conduciveness rather than depletion, not sensory acceptance alone

Pair semantics and limit: The pair supports sensory discrimination under a bodily-conduciveness criterion (I), while leaving the repeated *poshan* slot unresolved (O).

M-30 - *Khara* / *poshan*

Source check: AVD, pp. 93-94; MVD, p. 347. The same column-definition mismatch as M-25 applies.

Field	M-30a - <i>khara</i>	M-30b - <i>poshan</i>
Source content	Salty taste recognised through tongue-contact with a material object	Nourishing rather than depleting conjunction: a unit joined with a conducive unit

Field	M-30a - <i>khara</i>	M-30b - <i>poshan</i>
Entry form and bearer	Sensory quality borne by a physicochemical object and experienced through the tongue-body- <i>jeevan</i> relation	Repeated criterion, condition, or disputed activity slot borne by a conducive unit-relation
Object	The result of tongue-contact with salty material	The bodily-material consequence of that contact
Counterpart	Tongue, body, and tasted object are constitutive	Receiving unit and conducive or unconductive material unit
Endpoint	Accurate discrimination of salty contact for bodily health	Conjunction that supports the receiving unit
Governing criterion	Actual sensory quality assessed in relation to bodily health, not craving or habitual taste	Conduciveness rather than depletion, not saltiness, quantity, or immediate satisfaction

Pair semantics and limit: Saltiness and nourishment are not synonyms; bodily consequence governs the inferred relation (I). Whether six repeated *poshan* assignments are six members in more than a tabular sense remains O.

M-31 - *Sugandh-durgandh* / *shvasan-nihshvasan*

Source check: AVD, pp. 93-94; MVD, pp. 347-348. The AVD table gives *shvasan/nihshvasan*; the MVD defining line gives *prashvasan/vishvasan*.

Field	M-31a - <i>sugandh-durgandh</i>	M-31b - <i>shvasan-nihshvasan</i>
Source content	Pleasant and unpleasant smell received through olfactory contact	Inhalation and exhalation or the respiratory movement associated with smell
Entry form and bearer	Sensory-material quality borne by an emitting object and experienced through the olfactory body- <i>jeevan</i> relation	Bodily respiratory process or correlate, borne by the body
Object	Odorous material and its olfactory quality	Airflow and the bodily mediation of smell
Counterpart	Nose, respiratory body, surrounding air, and emitting object	Body, air, and olfactory contact
Endpoint	Accurate discrimination of smell in bodily-material contact	Functional respiratory mediation of olfactory contact

Field	M-31a - <i>sugandh-durgandh</i>	M-31b - <i>shvasan-nihshvasan</i>
Governing criterion	Fidelity to received olfactory quality; the source does not state that pleasant smell is nourishing or unpleasant smell harmful (O)	Actual inhalation-exhalation and bodily function, not inferred moral or aesthetic worth

Pair semantics and limit: Sensory quality and its bodily respiratory correlate form the narrowest defensible relation (I). The lexical variants and absence of separate definitions for the subterms remain O.

M-32 - *Suroop-kuroop* / *swagat-aswagat*

Source check: AVD, pp. 93-94; MVD, pp. 347-348. The AVD table names *swagat/aswagat*; the MVD definition presents the response as *apanapan/parayapan*, affinity and otherness.

Field	M-32a - <i>suroop-kuroop</i>	M-32b - <i>swagat-aswagat</i>
Source content	Beautiful and ugly visible form	Affinity and otherness in response to visible form
Entry form and bearer	Visual-material quality or evaluation borne by an appearing form and experienced by the embodied person	Evaluative or relational response in <i>mun</i> , borne by the perceiving person
Object	Visible form	The seen form and the affinity or otherness attributed in response
Counterpart	Eye-body, perceiver, and visible object	The visible entity toward which affinity or otherness is felt
Endpoint	Accurate recognition of visible form; the source does not define an endpoint for beauty judgement (O)	Correctly oriented response to visible form; the governing basis is not stated (O)
Governing criterion	Actual visible form rather than image manipulation; no universal beauty criterion is supplied locally	The source supplies the response-pair but not a criterion that could prevent appearance-based prejudice (O)

Pair semantics and limit: Visible form and an affinity/otherness response are directly paired (D), but the correctness of that response is underdetermined. Pass Two must not treat immediate attraction, exclusion, or cultural appearance standards as fulfilment.

6. Pass-One findings across the 106 records

6.1 Entry forms are irreducibly heterogeneous

The remaining members confirm the methodological decision made in the pilots. They include inward successes (*anand*, *shanti*, *sukh*), readinesses (*dhee*, *tatparta*, *swagat*), cognitive or expressive operations (*shruti*, *vidya*, *vichar*), relational values and acts (*vishwas*, *daya*, *mamta*), named person-roles (*shishya*, *mata*, *pita*), relationships (*pati-patni*, *bhaimitra*, *bahan*), material properties (*roop*, *jati*, the sensory qualities), bodily states or processes (*svasthya*, *shvasan-nihshvasan*), and criteria or results (*satya*, *dharma*, *poshan*). A uniform question such as “which institution activates this activity?” would therefore misclassify the source before social analysis begins.

6.2 Counterparts arise from definitions, not from a social taxonomy

Direct interpersonal counterparts are unavoidable in the definitions of kindness, grace, compassion, trust, generosity, learnerhood, cooperation, kinship, parenthood, and protection. Bodies and material objects are unavoidable in health, sensory contact, form, kind, and nourishing conjunction. Other members remain inward in their immediate bearer while implying later expression or evidence. These topologies have been recorded without deciding that a recurrent counterpart must be housed in family, school, court, workplace, market, or any other institution.

6.3 Endpoints and criteria are not equally explicit

Many definitions supply their own criterion: truth for *nishchaya*, justice for *dhairya* and *veerta*, receptivity for *daya* and *krupa*, bodily wellness for *priya*, humaneness for *samyama*, and conduciveness for *poshan*. Others name a content but not its correctness condition. The relation of *gaurav* to a worthy exemplar, the criterion governing affinity or otherness after visible form, the values specific to the spousal slot, and the functional reason for pairing kind with time remain open. Pass Two must preserve these gaps rather than filling them with conventional norms.

6.4 Pair semantics remain plural

The records disclose several recurring but non-exhaustive relations: held condition and readiness (*anand/dhee*), articulation and repeatability (*shruti/smriti*), capacity and artful activity (*medha/kala*), inner regulation and outward participation (*samyama/niyam*), relational role and value-bearing conduct (*sathi/dayitva*), sensory quality and bodily correlate (*sugandh-durgandh/shvasan-nihshvasan*), and property paired with another analytic property (*jati/kaal*). Some pairs remain connected only by the source position. This plurality rules out reversing or extending the first member’s analysis to fill the second.

6.5 Documentary residuals carried forward

Five residual classes must remain visible in Pass Two:

- the alternate definitions of *medha*;
- role-name and translation variants around *sathi/swami* and *ullas/haas*;
- the mixed parent-child wording in *putra-putri*, *mata*, and *pita*;
- the repeated AVD *poshan* assignments against temperature and six tastes, where MVD supplies a recurring criterion rather than seven independent definitions; and
- the closing lexical variants and missing correctness criterion for visible-form affinity and otherness.

None prevents lifecycle analysis. Each prevents false precision.

7. Normalization gate before Pass Two

Pass One need not be redone. It has established the documentary identity and narrow anatomy of every slot. The next task is to normalize those records into a common 122-member feature matrix before adding lifecycle requirements. Normalization is necessary because a direct source term can coexist with an inferred bearer, endpoint, or criterion in the same compact row, and because apparently similar words can occupy different ontological and evidential locations.

7.1 Field-level provenance

Each member must receive a separate **D**, **I**, **H**, or **O** code for its entry form, ontological locus, bearer, object, constitutive counterpart, endpoint, and governing criterion. **H** is added for a provisional environmental, sphere, or organisational hypothesis. A direct definition of a role or result does not make the analyst's account of its endpoint or social condition direct. Open endpoints and criteria remain open through clustering unless later source evidence or an explicit argument resolves them.

7.2 Four locations that must not be collapsed

The normalized record separates four fields:

1. **Ontological locus** - where the entry is borne: *jeevan*, body, relationship, material unit or process, result field, or disputed location.
2. **Field of operation** - the content, person, body, relation, object, or process with which it deals.
3. **Field of consequence** - the persons, relationships, bodies, collectives, material systems, or future participants affected by expression.
4. **Field of evidence and evaluation** - where correctness becomes observable and which standpoints can assess it.

An inward locus can therefore have relational or ecological consequences and public evidence. Conversely, a material property or bodily process can occupy a source activity slot without becoming a second private operation of *jeevan*.

7.3 Entry-form-specific lifecycle paths

Each normalized member enters one primary path: inner operation or orientation; role or relation; material or sensory property; bodily process or state; criterion or result; or a documented residual. Pass Two will still examine development, orientation, performance, consequence, evaluation, correction, sustaining, and transmission, but the question changes with the entry form. A role requires a counterpart, responsibilities, protection, and succession; a property requires access, discrimination, use, and consequence; a bodily process requires conditions of capability and restoration; a result requires the operations, evidence, and affected parties through which it is achieved. This branching prevents semantic objects and results from being redescribed as unobserved mental acts.

7.4 External relation, necessity scope, and universality

Every proposed external condition will be classified by three independent dimensions.

Dimension	Codes	Question answered
Relation type	CONST, ENAB, EVID, PROT, CORR, SUST, TRANS	Is the condition constitutive, enabling, evidential, protective, corrective, sustaining, or transmissive?
Strength and scope	N/S/C/U joined to OCC/EXP/EVD/COR/CON	Is it necessary, supportive, contextual, or unclear for occurrence, expression, evidence, correction, or continuity?
Universality	U-J, U-H, V-C	Does it follow from common <i>jeevan</i> architecture, from universal embodied-human dependence, or from contextual design?

Thus a protected opportunity for a counterpart to speak may be **PROT; N-EVD; U-H; I** without being declared necessary for the inward occurrence of the bearer's deliberation. A particular court procedure may be **CORR; C-COR; V-C; H** even if access to independent correction is a universal functional requirement.

7.5 Textual social vocabulary is input, not an independent discovery

The source directly names roles, relationships, family, education-*sanskar*, production, exchange, and universal orderliness in some passages and member definitions. The normalized matrix will retain these as **D** textual commitments and tag them as source-embedded social vocabulary. Later clustering must hide those labels. If a role or social function reappears after

institution-neutral feature comparison, that convergence strengthens the proposed structure; if it appears only because its name was visible to the coder, it cannot count as a bottom-up derivation.

7.6 Normalization completion criteria

The gate is complete only when all 122 records have:

- one primary entry form and an explicit residual flag where needed;
- separate locus, operation, consequence, and evidence fields;
- field-level provenance for endpoint and criterion as well as bearer and object;
- source-embedded social terms identified and removable for blind comparison;
- a stable anonymous activity ID; and
- unresolved alternatives preserved rather than resolved by institutional preference.

The normalized feature matrix then becomes the fixed input to Pass Two. Normalization may clarify wording or split a mixed field, but it must not silently change the documentary assignment established here.

8. Completion statement and handoff to Pass Two

Pass One is complete at the declared grain. The eight pilots supply sixteen checked anatomy records; this register supplies 106. All sixty-one AVD positions and all 122 column assignments now have an identified entry form, bearer, object, counterpart, endpoint, criterion, and pair-semantics statement or an explicit open field.

The immediate handoff is the normalization gate in §7, followed by Pass Two. Pass Two may then ask, member by member, what is required for development and receptivity, right orientation, embodied performance, consequence visibility, evaluation, correction, sustaining, and transmission. It should first record dependencies among activities of *jeevan*, then external conditions. It should not yet cluster members into spheres, and it should not use family or the five institutional functions as coding categories.
