

Research Note: The Sixty-One Activity Pairs of *Jeevan*

Author: Raghava Mohan Madhwapathi (analyticmadhyasthdarshan.org)

Edited on: August 13, 2026, 4:05 PM IST

Status: Internal research note (not a catalog entry). Compiled as the source inventory behind §9 of [*A Control-System Model of Jeevan—Bal, Shakti, and Activity*](#).

Scope: This note sets out all sixty-one activity pairs of *jeevan* as the primary texts give them, pair by pair, with the *bal* and *shakti* member of each named from the tabulated enumeration and defined from the detailed definitions. It records what the two sources agree on, where the definitional language cuts against the tabulated assignment, what relation holds between the two members of a pair, and which variants remain unreconciled.

The inventory is documentary. It does not propose a model of the pairs; the control reading built on them is in the companion note, and the questions this inventory leaves open are collected in §8.

1. Why the inventory exists

The 122 activities are the finest-grained account the sources give of what *jeevan* does. They are stated twice: once as a table that assigns every activity to a column, and once as definitions that describe each activity in a sentence or two. Both are needed, and neither is sufficient alone.

The table fixes which member of a pair is the *bal* and which the *shakti*. The definitions fix what each activity is about. The two are consistent in their ordering throughout, but the definitions cannot be used to recover the assignment, because in several places the language of a definition points the opposite way from the column it sits in (§6). A reading that classified the activities by what their definitions sound like would therefore disagree with the sources at identifiable points. Setting both out together is the only way to keep the assignment source-governed.

2. The two source presentations

The tabulated enumeration appears as Table 1, “122 conducts of awakened *jeevan*”, with the decomposition $2 \times (1 + 2 + 8 + 18 + 32) = 2 \times 61 = 122$ printed as its subtitle (AVD, pp. 91–94). It has five columns:

Column	Hindi	Content
1	<i>akshay bal ki kriyayen (pratyavartan)</i>	The activities of inexhaustible <i>bal</i> , under reflection
2	<i>akshay bal ka naam</i>	The name of the inexhaustible <i>bal</i> — the faculty
3	<i>jeevan ka avayav</i>	The constituent of <i>jeevan</i> — nucleus or orbit
4	<i>akshay shakti ka naam</i>	The name of the inexhaustible <i>shakti</i> — the orientation
5	<i>akshay shakti ki kriyayen (paravartan)</i>	The activities of inexhaustible <i>shakti</i> , under projection

The middle three columns carry the faculty-level naming and the outer two the activity-level partition, which is why one table states both grains at which strength and power are used. The English rendering in the source translates *bal* and *shakti* inconsistently, using “power” for both in the column heads and “force” for *shakti* in its name column; the Hindi बल and शक्ति is unambiguous and is what this inventory follows.

The detailed definitions run under the heading “The Definitions of 122 activities of *Jeevan*” (MVD, pp. 328–348). Each faculty’s block opens with its two modes, and the activities beneath are set out as two-name headings followed by a definition of each member. The block headings are realisation and authenticity for *atma*, enlightenment and resolve for *buddhi*, contemplation and visualisation for *chitta*, deliberation and analysis for *vritti*, and selection and taste for *mun* (MVD, pp. 328, 329, 332, 339).

3. The five loci

Constituent	Faculty (<i>bal</i>)	Orientation (<i>shakti</i>)	<i>Bal</i> activity	<i>Shakti</i> activity	Pairs	Activities
Nucleus	<i>Atma</i>	<i>Praman</i> , evidence	<i>Anubhav</i> , realisation	<i>Pramanikta</i> , authenticity	1	2
First orbit	<i>Buddhi</i>	<i>Ritambhara</i> , resoluteness	<i>Bodh</i> , enlightenment	<i>Sankalp</i> , resolve	2	4
Second orbit	<i>Chitta</i>	<i>Ichha</i> , desire	<i>Chintan</i> , contemplation	<i>Chitran</i> , visualisation	8	16
Third orbit	<i>Vritti</i>	<i>Vichar</i> , thought	<i>Tulan</i> , deliberation	<i>Vishleshan</i> , analysis	18	36

Constituent	Faculty (<i>bal</i>)	Orientation (<i>shakti</i>)	<i>Bal</i> activity	<i>Shakti</i> activity	Pairs	Activities
Fourth orbit	<i>Mun</i>	<i>Asha</i> , hope	<i>Asvadan</i> , taste	<i>Chayan</i> , selection	32	64
					61	122

Every pair below occupies one position at one of these loci. The numbering within each faculty is the source's own (AVD, pp. 91–94).

4. The sixty-one pairs

Glosses in the *bal* and *shakti* columns are the tabulated enumeration's; the two description columns condense the detailed definitions. Where a definition runs to several clauses only its governing ones are given.

4.1 *Atma* — one pair

#	<i>Bal</i> — state	What it establishes	<i>Shakti</i> — motion	How it becomes effective
1	<i>anubhav</i> — realisation, in <i>astitva</i>	Eternal presence in the form of nature saturated in Omnipotence	<i>pramanikta</i> — authenticity, of <i>paramanand</i>	Realisation-based expression, communication and exposition

Atma's pair is named twice over. The tabulated enumeration gives the modes, realisation and authenticity; the definitions give their contents, existence and ultimate bliss, under the sub-heading “Realisation in existence / Authenticity of ultimate bliss” (MVD, p. 328).

4.2 *Buddhi* — two pairs

#	<i>Bal</i> — state	What it establishes	<i>Shakti</i> — motion	How it becomes effective
1	<i>anand</i> — bliss	Endless, uninterrupted celebration activity	<i>dhee</i>	The inclination activity of celebration, readiness for projection
2	<i>astitva</i> — existence	Acceptance free from delusion of state, motion, development, awakening, and the present	<i>dhruti</i>	Dedication in truth as coexistence and tendency for projection; absence of fear, trust in the present

Buddhi's block carries the one sentence in the whole enumeration that names the partition of a pair outright: the pinnacle of acceptance of the state and motion of awakening is bliss and *dhee* (MVD, p. 328). Both of its pairs place an acceptance against a readiness for projection.

4.3 *Chitta* — eight pairs

#	<i>Bal</i> — state	What it establishes	<i>Shakti</i> — motion	How it becomes effective
1	<i>shruti</i> — revelation	Articulation of understanding of reality; the expression of knowledge of <i>jeevan</i> and holistic view of existence	<i>smriti</i> — memory	Presentation of understanding through language as many times as necessary
2	<i>medha</i> — intellect	The carrier-bearer activity of memory; the activity that bears <i>kala</i>	<i>kala</i> — art	Beautification activity along with usefulness
3	<i>kanti</i> — radiance	Light as the clarity of meaning as possibility	<i>roop</i> — form	Shape, volume, and density
4	<i>nireekshan</i> — inspection	Realisation-based holistic view, manifesting as contemplation combined with visualisation	<i>guna</i> — properties	Relative motions; assessment of generative, degenerative, and mediative motion
5	<i>santosh</i> — contentment	The lack of the sentiment of lacking	<i>shree</i> — abundance	Prosperity, or acceptance of continuity of prosperity
6	<i>prem</i> — love	Realisation of the complete; devotion in completeness and its continuity	<i>ananyata</i> — non-otherness	Complementary activity in mutuality of humans and with the rest of nature
7	<i>vatsalya</i> — guidance	The continuity of nurturing and protection for comprehensive resolution	<i>sahajta</i> — effortlessness	Clarity and authenticity; integrality of behaviour, norm, thought and realisation
8	<i>shraddha</i> — reverence	Movement towards righteousness, qualitative transformation towards conduct completeness	<i>pujyata</i> — devoutness	Activeness for qualitative development and awakening

4.4 Vritti – eighteen pairs

#	<i>Bal</i> – state	What it establishes	<i>Shakti</i> – motion	How it becomes effective
1	<i>vidya</i> – learning	Systematically knowing, believing and accepting something as it is, i.e. the purpose of its being	<i>pragya</i> – intelligence	Completely refined human consciousness; manifestation of conception of objective and relative truth
2	<i>keerti</i> – repute	The activeness for awakening	<i>vichar</i> – thought	Unfolding of verity with exuberance; the exposition and communication of coexistence
3	<i>nishchaya</i> – certitude	Continuity of thought of verity	<i>dhairya</i> – patience	Continuity of just thoughts
4	<i>shanti</i> – peace	Consequence of resolved thoughts; absence of resistance in desire and thought	<i>daya</i> – kindness	Not interfering in others' awakening; instilling content and ability according to their receptivity
5	<i>krupa</i> – grace	Being capable of helping another's awakening or acquiring of receptivity	<i>karuna</i> – compassion	Inspiring others for awakening; being helpful to their acquiring ability and receptivity
6	<i>dum</i> – uprightness	The act of ending attachment towards decline; liberation from delusion, fear and wastefulness	<i>kshama</i> – forgiveness	Remaining unaffected from another's aspect of decline while helping them for awakening
7	<i>tatparta</i> – readiness	Activeness in awakening; perseverance in production; dedication in humane behaviour	<i>utsah</i> – enthusiasm	Intrepidity for rising; awareness of the orderliness
8	<i>kritagyata</i> – gratitude	The acceptance of help received from anyone for advancement	<i>saumyata</i> – humility	Wilful self-restraint; being established in the natural state, i.e. civility
9	<i>gaurav</i> – glory	Embracing to emulate without resistance	<i>saralta</i> – simplicity	Demeanour devoid of complexity and tension

#	Bal — state	What it establishes	Shakti — motion	How it becomes effective
10	<i>vishwas</i> — trust	Fulfilment of values inherent in mutuality	<i>saujanya</i> — concordance	Collaboration, co-participation, cooperation, complementariness
11	<i>satya</i> — truth	That which is uniformly perceivable, existent and realisable at all times	<i>dharma</i>	Innateness itself; that from which its separation does not happen
12	<i>nyaya</i> — justice	Recognition of relationships, fulfilling of values, evaluation, and mutual satisfaction	<i>samvedna</i> — sensitivity	Movement for completeness; grasping external signals through all cognitive organs; readiness for participation in the orderliness
13	<i>tadatmayata</i> — absolute- oneness	The decision made along with acceptance towards eternalness	<i>sahas</i> — intrepidity	Work and behaviour performed with happiness along with endurance
14	<i>samyama</i> — restraint	Being regulated in humane thought, behaviour and vocation	<i>niyam</i> — law	The tendency and evidence of participating in the overall orderliness while self-regulated
15	<i>veerta</i> — courage	Utilising one's powers to ensure delivery of justice to others	<i>dheerta</i> — fortitude	Dedication and firmness towards justice
16	<i>bhav</i> — sentiment, value	Essentiality, value, responsibility, participation	<i>samveg</i> — impetus	The momentum acquired from meaningful union
17	<i>jati</i> — kind	The uniqueness of form, properties, essential nature and <i>dharma</i>	<i>kaal</i> — time	Duration of activity
18	<i>tushti</i> — satiation	Accomplishment of the six merits, resolution and prosperity in the family, participation in the undivided society	<i>pushti</i> — confirmation	Continuous evaluation of satiation; its dissemination in the form of human tradition

4.5 *Mun* — thirty-two pairs

The first twenty-two are relational and dispositional; the last ten are the activities of the cognitive and work organs, set out under their own sub-heading (MVD, p. 347).

#	<i>Bal</i> — state	What it establishes	<i>Shakti</i> — motion	How it becomes effective
1	<i>bhakti</i> — devotion	Becoming liberated from fear and delusion; total dedication	<i>tanmayata</i> — immersion	Being enthralled in the effect of awakening, with definite goal and direction
2	<i>mamta</i> — care	Nurturing and protecting with the pinnacle of affinity; accepting the other as an image of oneself	<i>udarta</i> — generosity	Offering body, mind and wealth as needed for another's awakening, health and prosperity
3	<i>samman</i> — respect	The acceptance of personality and talent	<i>sauhardta</i> — cordiality	Presenting conception, realisation, memory and direct recognition the way it is accepted
4	<i>sneha</i> — affection	Absence of resistance in just behaviour	<i>nishtha</i> — dedication	Continuous endeavour of attaining and evidencing the goal of complete awakening
5	<i>putra-putri</i> — son, daughter	Acceptance of parents as having given birth and being complementary for awakening	<i>anurag</i> — devotedness	Immersion obtained in absence of delusion; success in fulfilling the values inherent in relationships
6	<i>swami, sathi</i> — master	One who has attained comprehensive resolution and fulfils relationships upon knowing the self	<i>dayitva</i> — responsibility	Civilised behaviour with realisation of values in behaviour, vocation and orderliness
7	<i>sevak, sahyogi</i> — associate	One who moves with acceptance behind the guide for comprehensive resolution; helpful in production	<i>kartavya</i> — duty	Fulfilling values inherent in relationships and associations at every level
8	<i>svayatta</i> — self-reliance	The realisation of prosperity	<i>samriddhi</i> — prosperity	Production more than needs

#	Bal — state	What it establishes	Shakti — motion	How it becomes effective
9	<i>hita</i> — health	Usefulness within purview of the body	<i>svasthya</i> — wellness	Cognitive and work organs able to work according to <i>mun</i> and the tendencies
10	<i>priya</i> — pleasant	Conduciveness of the five sensory organs with respect to bodily wellness	<i>pravrittiyan</i> — tendencies	Hope, thought, desire, resolve and authenticity taking place in <i>jeevan</i> for projection
11	<i>ullas</i> — elation	Articulation; transparent presentation	<i>haas</i> — merriness	Movement towards humane goal and direction with resolution and joyousness
12	<i>sheel</i> — modesty	Identifying the grandeur of awakening in all dimensions with authenticity as civility	<i>sankoch</i> — politeness	Expressing disagreement in a civilised way
13	<i>guru</i>	One who imparts conception as resolution of inquiries through education- <i>sanskar</i>	<i>pramanik</i> — authentic	Bearer and carrier of evidence; living as evidence through experiment, behaviour, and realisation
14	<i>shishya</i> — disciple	One ready to accept education- <i>sanskar</i> , in whom the relationship of guru is accepted	<i>jigyasu</i> — inquirer	Demonstration of strong desire for delusion-free education
15	<i>bhai-mitra</i> — brother, friend	One born of the same womb; brother-like acceptance	<i>pragati</i> — progress	Participation in the overall orderliness, with emphasis on resolution
16	<i>bahan</i> — sister	One born of the same womb; sister-like acceptance	<i>unnati</i> — advancement	Expectation, process and evidence of prosperity; movement towards awakening
17	<i>sweekruti</i> — acceptance	Evidencing, in projection, all signals as received owing to realisation-based effect	<i>swagat</i> — reception	The preparations for evidencing the acceptances of law, justice, resolution, truth

#	Bal — state	What it establishes	Shakti — motion	How it becomes effective
18	<i>ruchi</i> — interest	Recognition of results from the contact of conducive physicochemical things with the senses	<i>pehchan</i> — recognition	Identification of necessary elements in sensory contact; acceptance of the result of <i>yog-sanyog</i>
19	<i>sukh</i> — happiness	Resolution	<i>sfoorti</i> — motivation	The tendency in, by, for evidence of resolution
20	<i>pati, patni</i> — husband, wife	The spousal relationship	<i>yatitva, satitva</i> — diligence, steadfastness	Work and behaviour performed effortfully, and truthfully with resolve, for emancipation and awakening
21	<i>mata</i> — mother	Acceptance of having given birth and being complementary for awakening	<i>poshan</i> — nurturing	Unit plus conducive unit
22	<i>pita</i> — father	Acceptance of providing nurturing and protection	<i>sanrakshan</i> — protection	Removing obstacles, for ease
23	<i>mridu, kathor</i> — soft, hard	What bears less or more weight or pressure than touch	<i>vahan, samvahan</i> — bearability	Bearing and conveying
24	<i>sheet, ushna</i> — cold, hot	Nurturing or depriving contact	<i>poshan</i> — nourishing	Unit plus conducive unit
25	<i>khatta</i> — sour	Taste recognised on contact of the tongue	<i>poshan</i> — nourishing	Nourishing or depleting
26	<i>meetha</i> — sweet	Taste recognised on contact of the tongue	<i>poshan</i> — nourishing	Nourishing or depleting
27	<i>chirchira</i> — pungent	Taste recognised on contact of the tongue	<i>poshan</i> — nourishing	Nourishing or depleting
28	<i>kadua</i> — bitter	Taste recognised on contact of the tongue	<i>poshan</i> — nourishing	Nourishing or depleting
29	<i>kasaila</i> — astringent	Taste recognised on contact of the tongue	<i>poshan</i> — nourishing	Nourishing or depleting

#	<i>Bal</i> — state	What it establishes	<i>Shakti</i> — motion	How it becomes effective
30	<i>khara</i> — salty	Taste recognised on contact of the tongue	<i>poshan</i> — nourishing	Nourishing or depleting
31	<i>sugandh</i> , <i>durgandh</i> — pleasant, unpleasant smell	What is received through smell	<i>shvasan</i> , <i>nihshvasan</i> — respiration	Inhalation and exhalation
32	<i>suroop</i> , <i>kuroop</i> — beautiful, ugly	What is received through visible form	<i>swagat</i> , <i>aswagat</i> — affinity, otherness	Affinity or otherness

The purpose of the sensory group is stated with it: every awakened human recognises that the purpose of sensations is maintaining the health of the body, and nourishing is defined as unit plus conducive unit against depleting as unit plus unconducive unit (MVD, pp. 348, 347).

5. What the two presentations agree on

The order is the same in both. Every one of the sixty-one two-name headings in the detailed definitions names its *bal* member first and its *shakti* member second, matching the column each activity occupies in the tabulated enumeration, without exception across all sixty-one pairs and both faculty orderings. The agreement extends to the compound entries, where *mridu-kathor* stands against *vahan-samvahan* in the definitions exactly as the columns place them (MVD, p. 347; AVD, p. 92).

That agreement is worth stating because the two presentations are otherwise independent: one is a table of names with no definitions, the other a run of definitions with no columns. Their concurrence on ordering is what allows either to be read against the other, and it means the *bal* member of any pair can be identified from the definitions alone by position, though not by content (§6).

Naming differs in places without affecting the assignment. *Shruti* is rendered “revelation” in the table and “realised articulation” in the definitions; *pushti* is “validation” against “confirmation”; *jati* is “species” against “kind”; *bhav* is “value” against “sentiment”; *ananyata* is “non-dualness” against “non-otherness”. These are translation variants of one Hindi term in each case.

6. Where the definitions cut against the column

The tabulated assignment cannot be recovered from the definitions by reading which of the two sounds more like a state and which more like a motion. In the following pairs that procedure gives the wrong answer or no answer, which is why the table governs.

Pair	Tabulated assignment	What the definition says	Why the reading misleads
<i>veerta</i> / <i>dheerta</i>	<i>veerta</i> is the <i>bal</i>	<i>Veerta</i> is “utilising one’s powers to ensure delivery of justice to others”; <i>dheerta</i> is “dedication and firmness towards justice”	The <i>bal</i> member is defined by outward deployment and the <i>shakti</i> member by settled dedication, the reverse of the expected sense
<i>sweekruti</i> / <i>swagat</i>	<i>sweekruti</i> is the <i>bal</i>	<i>Sweekruti</i> is “the activity of evidencing, in projection, all the signals as it is received”	A <i>bal</i> activity defined with projection and evidencing in its own clause
<i>santosh</i> / <i>shree</i>	<i>santosh</i> is the <i>bal</i>	<i>Santosh</i> is “the lack of the sentiment of lacking” and also “readiness for evidencing along with production more than needs”	Readiness-for-evidencing language inside a state activity
<i>keerti</i> / <i>vichar</i>	<i>keerti</i> is the <i>bal</i>	<i>Keerti</i> is “the activeness for awakening”	Activeness is motion language; both members read as motion
<i>shraddha</i> / <i>pujyata</i>	<i>shraddha</i> is the <i>bal</i>	<i>Shraddha</i> is “movement towards righteousness”; <i>pujyata</i> is “activeness for qualitative development”	Both members read as movement; neither reads as a resting state
<i>nireekshan</i> / <i>guna</i>	<i>nireekshan</i> is the <i>bal</i>	<i>Nireekshan</i> is an inspecting activity; <i>guna</i> is “relative motions”, what gets inspected	The pair divides as act and object, not as state and motion

Two general points follow. First, several definitions carry both an established clause and a readiness-or-evidencing clause within one activity, on both sides of the partition; the internal grammar of a definition is therefore not a partition signal. Second, *bal* and *shakti* here are not “static” and “dynamic”. A *bal* activity is an activity, and the sources say so; what distinguishes it is that it is what the faculty has established in itself, which may well be established as an activeness or a movement.

7. What relation holds between the two members

The sources do not state a general rule for how a *shakti* member stands to its *bal* member, and the relation is not uniform across the sixty-one. Reading the pairs together, it falls into recognisable families.

State and its readiness for projection. Both of *buddhi*'s pairs, where an acceptance is set against an inclination or tendency for projection, and where the partition is stated in the text itself (MVD, pp. 328–329).

Capacity and what it bears. *Medha* and *kala*, where *medha* is defined as the activity that bears *kala* (MVD, p. 324), and *vidya* and *pragya*.

Held condition and its outward evidence. *Santosh* and *shree*, *svayatta* and *samriddhi*, *sukh* and *sfoorti*, *hita* and *svasthya*, *tushti* and *pushti*. In each the *bal* member names an inner condition and the *shakti* member the production, wellness, motivation, or dissemination that shows it. *Tushti* and *pushti* is the clearest: the continuity of completeness is satiation, and its dissemination in the form of human tradition is confirmation (MVD, p. 339).

Relationship and the value fulfilled in it. The largest systematic run in the enumeration, covering ten of *mun*'s pairs — son and daughter with devotedness, master with responsibility, associate with duty, mother with nurturing, father with protection, guru with authenticity, disciple with inquiry, brother and friend with progress, sister with advancement, husband and wife with diligence and steadfastness. The *bal* member names a relationship and the *shakti* member the value realised in it.

Received quality and its bodily effect. The sensory group, *mun* 23 to 32, where a polar pair of recognised qualities stands against the bodily function it serves: bearability for touch, nourishing for temperature and the six tastes, respiration for smell, affinity for visible form.

Act and its object. *Nireekshan* and *guna*, *ruchi* and *pehchan*.

A residue does not settle into any of these. *Satya* and *dharma*, *jati* and *kaal*, and *kanti* and *roop* pair two categories of recognised content rather than an activity with its exercise, and the relation between the members reads as correlative rather than directional.

The variety matters for modelling. A model that reads every pair as one relation — state then its projection outward — holds for *buddhi*, fits the third family well, and misdescribes the relational and sensory groups, which between them are twenty of *mun*'s thirty-two pairs.

8. Variants and unresolved points

A second, unpaired list. Before the definitions begin, a shorter run of activity definitions appears without pairing, laid out as a flat glossary (MVD, pp. 323–326). Most of its entries recur in the paired enumeration, sometimes worded differently — *medha* is “the activity that bears *kala*” there and “the carrier-bearer activity of memory” in the paired list, and *shanti* is “behaviour based on resolved thoughts” against “consequence of resolved thoughts”. Two entries in it have no counterpart in the paired enumeration at all: *ichchha*, desire, as “aware-

ness about one's wishes and aspirations", and *kalpana*, imagination, as "prior form of belief" (MVD, pp. 325–326). Neither appears among the 122. *Ichchha* is separately the name of *chitta's shakti* in the tabulated enumeration, which may account for its absence from the activity list, but nothing consulted accounts for *kalpana*.

Saujanya twice. In the detailed definitions the twelfth *vritti* heading reads "*Nyaya (saujanya), Samvedna*", giving *saujanya* parenthetically at *nyaya* although it is already the *shakti* member of the tenth pair (MVD, pp. 336, 335). The tabulated enumeration has *nyaya* alone at position twelve.

Sound has no pair. The sensory group covers touch, temperature, the six tastes, smell, and visible form. Sound appears inside the definition of *priya*, among the five organs whose conduciveness it names, but not as a pair of its own (MVD, p. 343). Whether that follows from the enumeration's principle is open.

The counts are stated, not derived. The decomposition into one, two, eight, eighteen, and thirty-two positions is printed with the table but nowhere argued, and the general account of atomic constitution says only that each orbit holds one or more particles (MVD, p. 78). The four orbital terms are the shell capacities $2n^2$ for $n = 1$ to 4; no consulted passage states that correspondence.

What a pair-level specification would need. The enumeration supplies a uniform two-slot form but not uniform fields. Some definitions state a governing criterion or an evidential result and others a single clause, and the tabulated version has five columns with none of the three. A specification giving each pair its content, criterion, adjoining interface, and evidential result would therefore have to be constructed rather than read off.
