

Research Note: Bottom-Up Pilot Derivation of *Jeevan* Activity Spheres

Author: Raghava Mohan Madhwapathi (analyticmadhyasthdarshan.org)

Edited on: August 16, 2026, 8:23 AM IST

Status: Internal research note (not a catalog entry). First completed use of the institution-neutral [activity-to-sphere dossier template](#).

Scope: This note re-analyses eight contrasting *bal/shakti* pairs as sixteen activity-members. It does not begin with family, the five institutional functions, or any other social taxonomy. For each member it identifies the bearer, object, participant topology, endpoint of fulfilment, governing criterion, and the conditions required for development, orientation, performance, consequence visibility, evaluation, correction, sustaining, and transmission. These records yield provisional micro-spheres. Only after that derivation does the note ask whether any sphere requires durable organisation.

The environment does not create a constitutional activity of *jeevan*. “Fully active” cannot therefore mean switched on from outside. It means effectively available, rightly oriented by realisation and understanding, competently embodied, evident in the relevant field, open to correction, and capable of continuity in *sanskar*. External arrangements can support or obstruct these conditions without becoming the cause of realisation.

1. Method and pilot selection

1.1 The activity-member is the analytic unit

The sixty-one source-given pairs remain the documentary units, but their 122 members are the primary units of environmental analysis. This distinction is necessary because the entries are not semantically uniform. A member may name an inner success, a readiness, an act, an object, a relation, a person-role, a sensory quality, a bodily correlate, a material condition, or an evidential result. The environment appropriate to an act cannot be copied mechanically to its object, and the conditions for a relationship-role cannot be inferred from the conditions for a private state.

The coding uses **D** for direct textual support, **I** for structural inference, **H** for a provisional sphere or organisational hypothesis, and **O** for an open question. External requirements are **N**, necessary; **S**, strongly supportive; **C**, context-dependent; or **U**, unclear. Participation topologies are **J**, intra-*jeevan*; **B**, embodied personal; **D**, dyadic or small-group; **R**, durable close or intergenerational relation; **C**, collective or public; **E**, material or ecological; and **T**, historical or intergenerational transmission.

The full extension refines these codes in three ways. Every anatomy and lifecycle field receives its own evidential status. External conditions are classified as constitutive, enabling, evidential, protective, corrective, sustaining, or transmissive, with necessity scoped separately to occurrence, expression, evidence, correction, or continuity. Universality is also separated into what follows from common *jeevan* architecture, what follows from universal embodied-human dependence, and what remains a contextual design variable. The [dossier template](#) defines the compact codes.

1.2 Derivation protocol

Each activity-member passes through the same sequence:

1. establish the source definition, entry form, and bearer;
2. normalize field-level provenance and separate locus, operation, consequence, and evidence;
3. identify its object, constitutive counterpart, endpoint, and criterion of correct operation;
4. record dependencies within *jeevan* before proposing an external requirement;
5. code participant topology and entry-form-specific lifecycle conditions without naming an institution;
6. identify convergent evidence, evaluator standpoints, disagreement paths, correction, and false positives;
7. state a neutral micro-sphere and freeze a structured feature vector;
8. cluster anonymous feature vectors at several granularities, allowing overlaps and residuals;
9. test cluster stability before restoring names, faculties, pair labels, and source-embedded social vocabulary;
10. derive the minimum durable roles, norms, resources, decision rights, safeguards, and correction mechanisms;
11. compare several possible institutional bundles, including but not limited to the proposed five functions; and
12. validate the result against alternative arrangements, adverse cases, displaced harms, and surviving counterexamples.

A **sphere of activity** is a recurrent configuration of bearer, participants, object, endpoint, means, evidence, and lifecycle conditions. An **institution** is a durable arrangement of roles, norms, resources, decision rights, safeguards, and correction that maintains one or more spheres beyond episodic personal action. The two are not synonymous. A sphere may remain principally personal, several institutions may sustain one sphere, or one institution may sustain several spheres.

1.3 Pilot set

The pilots test different semantic forms rather than representing each faculty proportionally.

Dossier	Members	Faculty	Semantic problem tested
A-01	<i>anubhav / pramanikta</i>	<i>Atma</i>	Realisation and communicable evidence
B-02	<i>astitva / dhruti</i>	<i>Buddhi</i>	Definite acceptance and readiness for projection
C-04	<i>nireekshan / guna</i>	<i>Chitta</i>	An inspecting activity paired with an object or content
V-12	<i>nyaya / samvedna</i>	<i>Vritti</i>	Relational evaluation paired with responsive participation
V-18	<i>tushti / pushti</i>	<i>Vritti</i>	Multi-level fulfilment paired with continuing evaluation and transmission
M-08	<i>svayatta / samriddhi</i>	<i>Mun</i>	Experienced sufficiency and material evidence
M-13	<i>guru / pramanik</i>	<i>Mun</i>	A teaching relationship paired with the bearer of evidence
M-24	<i>sheet-ushna / poshan</i>	<i>Mun</i>	Sensory qualities paired with bodily-material conduciveness

The source inventory and its textual cautions remain in [The Sixty-One Activity Pairs of Jeevan](#). The distinction between orientation, expression, consequence, evaluation, inquiry, and *sanskar* follows [A Functional Model of Jeevan](#).

2. A-01 - Anubhav / pramanikta

2.1 Source record and pair semantics

Field	Entry
Faculty and generic pair	<i>Atma</i> : realisation/authenticity
Pair position	1 of 1
Member A	A-01a, <i>anubhav</i> - realisation in existence
Member B	A-01b, <i>pramanikta</i> - authenticity associated with ultimate bliss
Entry forms	Success condition of knowing / evidential orientation and expression

Field	Entry
Primary locations	AVD, p. 91; MVD, pp. 323, 328

Realisation is defined through the eternal presence of nature saturated in Omnipotence. Authenticity is defined through realisation-based expression, communication, and exposition. The pairing therefore supports an inward-to-evidential relation, but not a mechanical claim that every authentic act is generated automatically by realisation. The relation is **D** in its definitions and **I** in its functional interpretation.

2.2 Activity anatomy

Field	A-01a - <i>anubhav</i>	A-01b - <i>pramanikta</i>
Entry form and bearer	Success of knowing in <i>atma</i> ; borne by <i>jeevan</i>	Orientation and evidence-bearing expression; borne by the realised human being
Object or counterpart	Existence as coexistence; no interpersonal counterpart is constitutive to the inward event	Other persons, relationships, work, and nature before which realised knowledge becomes evident
Participation topology	J constitutive; B/C/E/T relevant only to evidence and continuity	J/B/C/E/T ; D/R where evidence occurs in sustained relationship
Endpoint	Undivided realisation and restfulness	Fidelity between realised content, explanation, conduct, and consequence
Criterion	Agreement with reality rather than intensity of conviction	Coherence across speech, behaviour, relationship, and result
Characteristic distortion	Certainty, altered state, or inherited belief mistaken for realisation	Eloquence, status, charisma, or reputation mistaken for authenticity

2.3 Lifecycle conditions

Stage	A-01a - <i>anubhav</i>	A-01b - <i>pramanikta</i>
Development and receptivity	Coherent proposal, study, inquiry, dialogue, and freedom to examine are S ; none causes realisation	Encounter with evidence-bearing persons, study, dialogue, and opportunities to explain are S
Right orientation	Reality itself is the N criterion; social assent is insufficient	Grounding in <i>anubhav</i> is N ; recognition or office is insufficient

Stage	A-01a - <i>anubhav</i>	A-01b - <i>pramanikta</i>
Embodied performance	Not constitutive of the inward event; bodily availability is S for examination and later evidence	Health, language, practical competence, time, and material means are N/S according to the form of evidence
Consequence visibility	Later agreement or contradiction across faculties, conduct, and restfulness is N for a warranted claim	Access to persons and natural systems bearing consequences is N for public evidence
Evaluation	First-person absence of contradiction is necessary but not sufficient for others; outer evidence is S	Bearer, counterparts, affected persons, and skilled peers must compare claim, conduct, and result; convergent evaluation is N
Correction	Renewed inquiry when explanation, conduct, or consequence contradicts the claim is S	Question, dialogue, restitution for harm, retraining, and correction of expression are N/S
Sustaining	Continuing availability of realised content cannot be assigned to an external structure; protected inquiry is S	Repeated congruence across settings and freedom from incentives to perform a role are S
Transmission	<i>Anubhav</i> itself is not transferred; proposals and methods of inquiry are transmitted S	Communication, exposition, exemplarity, and learner verification are N for continuity

2.4 Derived micro-spheres and tests

For anubhav to function effectively, jeevan must be able to realise coexistence under the criterion of reality, with its claim examined through continuing non-contradiction and later evidence, while inquiry remains free from coercive substitution of belief for knowing.

For pramanikta to function effectively, the realised person must be able to express knowledge before other persons and nature through competent conduct, under the criterion of fidelity between realisation and consequence, with plural evaluation and transmissible methods of inquiry.

The first statement yields a micro-sphere of **realised knowing and protected inquiry**; the second yields **authentic public evidence**. Every external condition could be present without *anubhav*, and a person may realise under adverse conditions. The external deriva-

tion therefore concerns receptivity, evidence, protection, correction, and transmission, not institutional production or certification of realisation.

3. B-02 - *Astitva* / *dhruti*

3.1 Source record and pair semantics

Field	Entry
Faculty and generic pair	<i>Buddhi</i> : enlightenment/resolve
Pair position	2 of 2
Member A	B-02a, <i>astitva</i> - enlightenment or acceptance of existence
Member B	B-02b, <i>dhruti</i> - dedication, fearlessness, and readiness for projection
Entry forms	Definite acceptance / stable readiness and resolve
Primary locations	AVD, p. 91; MVD, pp. 323, 328-329

Astitva concerns acceptance free from delusion of state, motion, development, awakening, and the present. *Dhruti* concerns dedication in truth as coexistence, readiness for projection, absence of fear, and trust in the present. Their relation as accepted content and readiness for projection is **D**. Fearlessness does not imply disregard of risk.

3.2 Activity anatomy

Field	B-02a - <i>astitva</i>	B-02b - <i>dhruti</i>
Entry form and bearer	Definite acceptance in <i>buddhi</i>	Stable resolve and readiness in <i>buddhi</i>
Object or counterpart	Existence, development, awakening, and the present	A course of action or projection under understood truth; affected persons and conditions become counterparts in expression
Participation topology	J constitutive; B/C/E enter through evidence	J/B constitutive for action; D/C/E according to affected field; T for learned continuity
Endpoint	Definite understanding free from delusion	Responsible, fearless projection consistent with that understanding
Criterion	Agreement with realisation and intelligible definiteness	Steadfastness without coercion, stubbornness, or denial of consequence

Field	B-02a - <i>astitva</i>	B-02b - <i>dhruti</i>
Characteristic distortion	Borrowed formula or dogmatic certainty mistaken for enlightenment	Obedience, aggression, recklessness, or fanaticism mistaken for resolve

3.3 Lifecycle conditions

Stage	B-02a - <i>astitva</i>	B-02b - <i>dhruti</i>
Development and receptivity	Study connecting proposal, reason, experience, and consequence is N/S ; trustworthy dialogue is S	Practice in making and explaining responsible decisions is S ; meaningful rather than simulated agency is N for development
Right orientation	Reception of <i>atma</i> 's indication without ignorance is N	Accepted truth and an understood purpose are N
Embodied performance	Language, attention, and the ability to explain are S	Bodily capability, discretion, skill, time, and means are N/S
Consequence visibility	Opportunities to compare accepted meaning with actual processes are S	Visibility of intended and unintended consequences is N for responsible resolve
Evaluation	The bearer and interlocutors test definiteness, reasons, and consistency; authority cannot substitute	Bearer, affected persons, and competent peers assess reasons, freedom, persistence, and consequence
Correction	Distinguish error in understanding from error in observation or formulation	Distinguish principle from failures of planning, skill, means, or timing; revise accordingly
Sustaining	Continued inquiry without status pressure or manufactured fear is S	Freedom from coercion, stable responsibility, and material sufficiency are S , not causes of inward fearlessness
Transmission	Dialogical study and exemplars transmit the possibility of definite understanding S	Learners need real responsibility, feedback, and courage without punishment for reasoned dissent S

3.4 Derived micro-spheres and tests

For astitva to function effectively, jeevan must be able to form definite acceptance of existence through reality-grounded inquiry, with its claim evaluated through reasons, consistency, and consequence rather than assent or confidence alone.

For dhruti to function effectively, the person must be able to undertake responsible projection under understood truth, with meaningful agency, adequate means, visible consequences, protected correction, and opportunities to transmit courageous responsibility.

The provisional micro-spheres are **definite understanding** and **responsible agency**. Authoritarian arrangements can produce decisive speech without either activity. Adverse conditions do not make correct resolve impossible, but they make its expression costly and its evidence ambiguous. The invariant is not comfort; it is inquiry joined to real responsibility, non-coercion, and consequence-sensitive correction.

4. C-04 - Nireekshan / guna

4.1 Source record and pair semantics

Field	Entry
Faculty and generic pair	<i>Chitta</i> : contemplation/visualisation
Pair position	4 of 8
Member A	C-04a, <i>nireekshan</i> - inspection
Member B	C-04b, <i>guna</i> - properties or relative motions
Entry forms	Cognitive act / object or assessed content
Primary locations	AVD, p. 92; MVD, pp. 327, 330

Inspection is a realisation-based holistic view manifesting as a conjunction of contemplation and visualisation. *Guna* is defined through relative motions assessed as generative, degenerative, or mediative. The source places the entries together but does not make *guna* a motion generated by inspection. Act and object is the narrowest defensible relation: **D** for definitions and pairing, **I** for that classification, and **O** for stronger directionality.

4.2 Activity anatomy

Field	C-04a - <i>nireekshan</i>	C-04b - <i>guna</i>
Entry form and bearer	Act of holistic inspection in <i>chitta</i>	Object or content assessed by <i>jeevan</i> ; properties or relative motions belong to the units or relations inspected
Object or counterpart	Units, processes, relationships, and their place in a whole	Generative, degenerative, and mediative motion or effect
Participation topology	J for contemplation; B/E for observation; D/C/T where evidence is collaborative or cumulative	E commonly constitutive; B/C/T for access, record, and public use
Endpoint	A whole-sensitive account of the object	Accurate discrimination of a relevant property or motion
Criterion	Fidelity to object, relevant completeness, and connection between meaning and observation	Classification agreeing with observation, relation, and consequence
Characteristic distortion	Data accumulation or a narrow model mistaken for holistic inspection	Label, metric, or projection mistaken for the property itself

4.3 Lifecycle conditions

Stage	C-04a - <i>nireekshan</i>	C-04b - <i>guna</i>
Development and receptivity	Training in observation, comparison, modelling, conceptual integration, and intellectual honesty is S	Access to varied exemplars, records, and discriminating concepts is S
Right orientation	Definite understanding and the purpose of the inquiry are N	The classification must answer to the meaning sought and not to convenience alone N
Embodied performance	Sensory access, attention, instruments, field access, time, and skill are N/C by object	Contact, measurement, comparison, and representation are N/C by object
Consequence visibility	Access to delayed, distributed, and adverse effects is N where those effects define the whole	Observation across relevant material cycles and timescales is N

Stage	C-04a - <i>nireekshan</i>	C-04b - <i>guna</i>
Evaluation	Independent observations, rival explanations, reproducibility, and affected expertise are S/N	Skilled observers compare classification with measurements and consequences N
Correction	Revise viewpoint, model, boundary, instrument, or classification under contradiction	Reclassify when repeated observation or wider consequence fails to agree
Sustaining	Transparent records, preserved failures, conflict-of-interest controls, and time for review are S	Stable access to objects, methods, calibration, and records is S
Transmission	Demonstration, apprenticeship, documented methods, and conceptual distinctions are S	Shared standards, samples, records, and teachable discriminations are S

4.4 Derived micro-spheres and tests

For nireekshan to function effectively, the inspecting person and relevant collaborators must be able to examine an object as part of a whole, under a reality-grounded purpose, with adequate access, skill, rival perspectives, reproducible evidence, and correction across consequences.

For guna to function effectively as assessed content, relevant properties and relative motions must be accessible to observation and comparison under clear criteria, with classifications corrected by repeated and long-horizon consequence.

The pair yields **whole-sensitive inquiry and property evidence**. It cannot yet establish a distinct institution called science, but it does establish a recurring public ecology of access, disciplined observation, records, criticism, reproducibility, and protection against suppression. Whether those requirements warrant a distinct durable organisation is a later question.

5. V-12 - *Nyaya* / *samvedna*

5.1 Source record and pair semantics

Field	Entry
Faculty and generic pair	<i>Vritti</i> : deliberation/analysis
Pair position	12 of 18
Member A	V-12a, <i>nyaya</i> - justice

Field	Entry
Member B	V-12b, <i>samvedna</i> - sensitivity
Entry forms	Relational evaluation / hybrid reception, readiness, and participation
Primary locations	AVD, p. 92; MVD, pp. 335-336

Justice comprises recognition of relationships, fulfilment of their values, evaluation, and mutual satisfaction. Sensitivity includes movement toward completeness, work, behaviour, and thought under law; inquiry and expectation toward awakening; reception of external indications through the cognitive organs; and readiness for participation in orderliness. The pair does not reduce to justice followed by emotion. Its functional grouping as relational evaluation and responsive participation is **I**; a single relation covering every clause of *samvedna* remains **O**.

5.2 Activity anatomy

Field	V-12a - <i>nyaya</i>	V-12b - <i>samvedna</i>
Entry form and bearer	Relational-evaluative activity in <i>vrutti</i>	Reception and responsive readiness in <i>vrutti</i> , embodied through cognitive organs and participation
Object or counterpart	Another person in a recognised relationship; affected third parties also matter	Persons, bodily indications, public conditions, and the prospect of orderliness
Participation topology	D constitutive; R/C according to relationship; B/E/T for participation and wider consequence	J/B for reception; D/C for response and participation; R/E/T according to field
Endpoint	Recognition, value-fulfilment, evaluation, and mutual satisfaction	Cognisant and responsible participation toward completeness
Criterion	Relationship-purpose, mutuality, non-harm, and freedom from coercion	Indications understood under right criteria rather than sensation or reaction alone
Characteristic distortion	Legal form, silence, obedience, or unilateral benefit mistaken for justice	Emotional reactivity, surveillance, stimulation, or conformity mistaken for sensitivity

5.3 Lifecycle conditions

Stage	V-12a - <i>nyaya</i>	V-12b - <i>samvedna</i>
Development and receptivity	Lived relations, understanding of values, dialogue, and examples of fair correction are N/S	Bodily sensory access, language, inquiry, and opportunities for non-coerced participation are N/S
Right orientation	Understanding of relationship and value is N	Justice, <i>dharma</i> , and truth must govern received indications and motivation N
Embodied performance	Communication, safety, practical means, and the ability to fulfil responsibility are N/S	Attention, communication, mobility, skill, and real opportunity to act are N/S
Consequence visibility	Both parties and affected third parties must be able to disclose effects N	Access to consequences of response, non-response, and collective action is N
Evaluation	Both participants require voice; independent evaluation is N where power or harm blocks reciprocity	Bearer, affected persons, and collaborators assess whether indications produced responsible participation
Correction	Direct dialogue where safe; mediation, restoration, appeal, or protective separation where needed	Feedback, renewed inquiry, changed response, repair, and protection from manipulation
Sustaining	Durable recognition, predictable protection, remembered commitments, and accessible correction are N/S	Repeated opportunities for meaningful participation and freedom from overload or coercion are S
Transmission	Participation in fair relationships, exemplarity, and teachable correction are S	Practice in noticing, inquiring, responding, and evaluating is S

5.4 Derived micro-spheres and tests

For nyaya to function effectively, persons in relationship must be able to recognise one another, fulfil values, evaluate consequences, and reach mutual satisfaction under freedom from coercion, with safe dialogue, appeal, restoration, and protection where reciprocity fails.

For samvedna to function effectively, the person must be able to receive relevant indications and participate responsibly with others under the criteria of justice, dharma, and truth, with feedback from affected persons and correction of both inattention and reactive response.

The members jointly yield **reciprocal relationship and protected participation**. A dyadic field is constitutive to *nyaya*; a durable close relation becomes required only where the relationship itself is continuous, intergenerational, or care-bearing. Public procedures become required when direct reciprocity cannot protect voice or correct concentrated power. This is a derivation from the activity topology, not an assumption that all justice begins in one household form.

6. V-18 - *Tushti* / *pushti*

6.1 Source record and pair semantics

Field	Entry
Faculty and generic pair	<i>Vritti</i> : deliberation/analysis
Pair position	18 of 18
Member A	V-18a, <i>tushti</i> - satiation or fulfilment
Member B	V-18b, <i>pushti</i> - confirmation
Entry forms	Achieved multi-level condition / continuing evaluation and dissemination
Primary locations	AVD, p. 92; MVD, pp. 338-339

Tushti is defined through the six merits after understanding, evidence of resolution and prosperity in the family, and participation in undivided society and universal orderliness. *Pushti* is continuous evaluation of that fulfilment through inspection and examination, continuity of completeness, and dissemination in the human tradition. The conjunction of achievement, evaluation, continuity, and transmission is **D**.

6.2 Activity anatomy

Field	V-18a - <i>tushti</i>	V-18b - <i>pushti</i>
Entry form and bearer	Deliberative recognition of a fulfilled condition across person, close relations, provision, and wider participation	Continuing inspection, confirmation, and dissemination of that condition
Object or counterpart	The person's resolution, durable shared life, material sufficiency, and wider social participation	The persistence and reproducibility of fulfilment across persons, places, and generations
Participation topology	J/R/C/E constitutive in the definition; B/T for performance and continuity	J/B/R/C/E/T ; multiple evaluators and generations are constitutive
Endpoint	Convergence of resolution, prosperity, and participation in orderliness	Fulfilment that survives examination and becomes available in human tradition
Criterion	Understanding evident across all named levels, not private satisfaction	Continuing agreement under inspection rather than institutional self-assertion
Characteristic distortion	Contentment or affluence mistaken for whole fulfilment	Propaganda, ritual repetition, longevity, or dissemination mistaken for confirmation

6.3 Lifecycle conditions

Stage	V-18a - <i>tushti</i>	V-18b - <i>pushti</i>
Development and receptivity	Understanding, value-fulfilling close relations, productive competence, and real participation are N across the definition	Shared criteria, inspection skills, records, learner participation, and freedom to question are N
Right orientation	Resolution and prosperity must remain ordered by completeness and universal participation N	Evaluation must seek continuing completeness rather than preservation of an organisation N
Embodied performance	Daily conduct, shared provision, useful work, and public participation are N	Inspection, examination, communication, teaching, and replication are N/S

Stage	V-18a - <i>tushti</i>	V-18b - <i>pushti</i>
Consequence visibility	Evidence must span person, close relations, material provision, society, nature, and time N	Access to contradiction, exclusion, depletion, and delayed effects is N
Evaluation	Bearer, close participants, affected persons, competent investigators, and later participants all contribute N	Independent and participatory review against public criteria is N
Correction	Revise conduct, relationship, production, participation, or criteria wherever convergence fails	Dissent, transparent records, redesign, restitution, and re-teaching must remain normal N
Sustaining	Durable relations, material reserve, role continuity, maintenance, and public participation are N/S	Repeated review, preserved evidence, succession of competent participants, and ecological continuity are N
Transmission	Living participation and <i>sanskar</i> , not verbal dissemination alone, are N	Dissemination joined to learner verification and reproduced fulfilment is N

6.4 Derived micro-spheres and tests

For tushti to function effectively, the person and participants in durable shared life must be able to realise resolution, dependable sufficiency, and wider participation under a criterion of completeness, with evidence across relationship, provision, society, and nature.

For pushti to function effectively, present and later participants must be able to inspect, correct, reproduce, and transmit that fulfilment under shared criteria, with access to records, dissent, consequences, and living evidence.

These members yield **multi-scale fulfilment and living continuity**. The activity itself names a durable close and intergenerational field, but it does not settle household size, residence, inheritance, authority, or gendered work. It also requires collective and ecological evidence that no close group can provide alone. The sphere therefore crosses scales before any institution is named.

7. M-08 - *Svayatta* / *samriddhi*

7.1 Source record and pair semantics

Field	Entry
Faculty and generic pair	<i>Mun</i> : taste/selection
Pair position	8 of 32
Member A	M-08a, <i>svayatta</i> - self-reliance or realisation of prosperity
Member B	M-08b, <i>samriddhi</i> - prosperity as production more than needs
Entry forms	Experienced sufficiency / material and productive evidence
Primary locations	AVD, p. 93; MVD, p. 341

Svayatta is defined here as the realisation or experience of prosperity; *samriddhi* as production more than needs. The definition rather than the broad English gloss governs the analysis. “More than needs” requires an account of need, usefulness, access, and continuity; it does not license indefinite output, accumulation, or waste. The definitions are **D**; experienced and produced sufficiency as their functional relation is **I**.

7.2 Activity anatomy

Field	M-08a - <i>svayatta</i>	M-08b - <i>samriddhi</i>
Entry form and bearer	Experienced certainty of dependable sufficiency, borne by the person in a shared provisioning relation	Material condition and evidence arising from organised production relative to assessed need
Object or counterpart	Needs, capabilities, provision, and other persons sharing use and responsibility	Bodies, tools, land or inputs, labour, useful outputs, users, and natural systems
Participation topology	J/B/R/E ; C/T where provision depends on distributed capacities and continuity	B/R/C/E/T ; production and surplus commonly exceed isolated personal action
Endpoint	Freedom from experienced lack grounded in actual capability and provision	Useful, accessible, durable output beyond assessed need
Criterion	Dependable sufficiency without fear-driven accumulation or hidden dependence	Need, quality, usefulness, just access, safe work, and regeneration

Field	M-o8a - <i>svayatta</i>	M-o8b - <i>samriddhi</i>
Characteristic distortion	Wealth, stocks, income, status, or fragile dependency mistaken for sufficiency	Gross output, waste, forced labour, exclusion, or depletion counted as prosperity

7.3 Lifecycle conditions

Stage	M-o8a - <i>svayatta</i>	M-o8b - <i>samriddhi</i>
Development and receptivity	Learning to assess finite need, capability, use, maintenance, sharing, and reserve is N/S	Productive knowledge, apprenticeship, design, safety, and resource literacy are N
Right orientation	Justice, <i>dharma</i> , truth, and disciplined need govern the taste of sufficiency N	Need and right use must govern production and surplus N
Embodied performance	Health, skill, time, shared responsibility, and access to useful goods are N	Labour, skill, tools, inputs, infrastructure, coordination, and safe conditions are N
Consequence visibility	Participants must see fragility, dependency, workload, exclusion, and ecological cost N	Users, workers, affected communities, waste paths, and regenerative cycles must remain visible N
Evaluation	Persons sharing need and provision evaluate sufficiency with practical records and consequences	Producers, users, workers, skilled peers, and affected persons assess quantity, quality, access, safety, and regeneration
Correction	Revise need estimate, access, workload, use, maintenance, sharing, or reserve	Redesign product or process; repair harm; retrain; reallocate work and outputs; restore resources
Sustaining	Maintenance, stored competence, reserve, assured access, and diversified capability are N/S	Maintenance, replacement, seed or input continuity, reserve, and ecological regeneration are N
Transmission	Participation in need assessment and productive competence is S	Apprenticeship, records, shared tools, and transfer of responsibility are N/S

7.4 Derived micro-spheres and tests

For svayatta to function effectively, persons sharing provision must be able to assess and meet finite needs through dependable capability and fair access, under the criterion of sufficiency without exploitation or fear-driven accumulation, with evidence from use, workload, reserve, and continuity.

For samriddhi to function effectively, producers, users, and affected persons must be able to create and assess useful output beyond need under criteria of quality, safety, access, and regeneration, with correction across the full material cycle and transmission of competence.

The provisional sphere is **sufficiency and regenerative provision**. The close shared-life field is strongly implicated because need, care, use, work, and confidence are jointly experienced there, but the pair alone does not prove one family form. Distributed skill, materials, risk, infrastructure, and ecological consequence require wider coordination. The derived requirement is shared need-assessment and productive capability, not a preselected economic institution.

8. M-13 - *Guru / pramanik*

8.1 Source record and pair semantics

Field	Entry
Faculty and generic pair	<i>Mun</i> : taste/selection
Pair position	13 of 32
Member A	M-13a, <i>guru</i> - one who establishes conception as resolution of inquiries through education- <i>sanskar</i>
Member B	M-13b, <i>pramanik</i> - authentic bearer and carrier of evidence
Entry forms	Relationship-role / qualification of an evidence-bearing person
Primary locations	AVD, p. 93; MVD, p. 343

Guru denotes a person in a relationship rather than a private event. The role is defined through resolution of inquiries by education-*sanskar*. *Pramanik* denotes a bearer and carrier of evidence who lives the holistic view of existence, knowledge of *jeevan*, and humane conduct through experiment, behaviour, and realisation. Teaching beside lived evidence is **I** as the pair relation; the definitions and assignment are **D**.

8.2 Activity anatomy

Field	M-13a - <i>guru</i>	M-13b - <i>pramanik</i>
Entry form and bearer	Teacher-role borne by a person in relation to an inquiring learner	Evidential qualification borne by a person whose life carries the proposed knowledge
Object or counterpart	Learner, questions, conception, and resolution	Learners and other persons who can compare explanation with experiment, behaviour, and realisation
Participation topology	D constitutive; B/R/T for sustained teaching; C/E where evidence or safeguards extend outward	J/B/D/R/C/E/T because evidence spans the person, relationships, work, nature, and continuity
Endpoint	Learner moves from inquiry to understood resolution	Coherence of teaching, conduct, experiment, and realised knowledge
Criterion	Learner understanding with freedom to question and apply	Lived agreement rather than title, lineage, or public image
Characteristic distortion	Status, age, fluency, control, or learner obedience mistaken for being a teacher	Reputation, performance, selective conduct, or certification mistaken for authenticity

8.3 Lifecycle conditions

Stage	M-13a - <i>guru</i>	M-13b - <i>pramanik</i>
Development and receptivity	Teacher understanding, listening, pedagogy, learner questions, and practical competence are N	Realisation, understanding, repeated practice, and exposure to consequences are N
Right orientation	Responsibility to resolve inquiry without domination is N	Fidelity to realised knowledge across contexts is N
Embodied performance	Language, communication access, time, learning materials, demonstration, patience, and adaptation are N/S	Bodily health, practical skill, opportunities for work and relationship, and communicability are N/S
Consequence visibility	The learner's comprehension, freedom, application, and later evidence must be visible N	Counterparts and affected persons must be able to report congruence or contradiction N

Stage	M-13a - <i>guru</i>	M-13b - <i>pramanik</i>
Evaluation	Learner, teacher, peers, and affected persons evaluate content, pedagogy, freedom, and result	Self, learners, close counterparts, coworkers, and affected persons contribute convergent evidence
Correction	Questions about content and conduct; pedagogical revision; outside protection where authority is misused	Admission of contradiction, restitution, renewed inquiry, changed conduct, and independent scrutiny
Sustaining	Trust without dependency, protected learner voice, material support without intellectual submission, and teacher accountability are N/S	Repeated evidence across roles and freedom from image-management incentives are S
Transmission	Learners become competent to inquire, understand, live, and teach without succession by status N	Methods and criteria of evidence are transmitted with living demonstration N

8.4 Derived micro-spheres and tests

For guru to function effectively, a competent teacher and free learner must be able to sustain inquiry toward understood resolution, with dialogue, demonstration, learner voice, evidence of assimilation, correction of content and conduct, and preparation of future competent participants.

For pramanik to function effectively, the evidence-bearing person must be able to live and communicate realised knowledge across relationship, experiment, behaviour, and material consequence, with plural scrutiny, restitution for contradiction, and transmission without reliance on status.

The pair yields **inquiry-led teaching and lived credibility**. A durable teaching relation, learning materials, continuity of competence, and safeguards against concentrated authority are not optional for reliable transmission. These requirements may warrant organised maintenance, but they do not by themselves determine a school system, credential regime, lineage, residential form, or central authority.

9. M-24 - *Sheet-ushna / poshan*

9.1 Source record and pair semantics

Field	Entry
Faculty and generic pair	<i>Mun</i> : taste/selection
Pair position	24 of 32; sensory and work-organ subgroup
Member A	M-24a, <i>sheet-ushna</i> - cold and hot
Member B	M-24b, <i>poshan</i> - nourishing; the detailed definition contrasts nourishing and depleting
Entry forms	Sensory-material qualities / bodily-material relation and result
Primary locations	AVD, pp. 93-94; MVD, pp. 347-348

Cold and hot are defined through nurturing or depriving contact. Sensations serve maintenance of bodily health. Nourishing is defined as a unit joined with a conducive unit, against depletion as lack of a conducive unit or conjunction with an unconductive one. The AVD table gives *poshan* while the detailed passage uses a *poshan/shoshan* contrast. Thermal discrimination and bodily-material conduciveness are related **I**; a more exact *bal/shakti* direction remains **O**.

9.2 Activity anatomy

Field	M-24a - <i>sheet-ushna</i>	M-24b - <i>poshan</i>
Entry form and bearer	Sensory-material quality known through the human joint form; the temperature belongs to the contact field and its sensation to the body/ <i>jeevan</i> relation	Conductive bodily-material relation or result selected and recognised by the person
Object or counterpart	Body, air, food, water, surfaces, clothing, tools, and surroundings in thermal contact	Body and the material units whose conjunction supports or depletes its functioning
Participation topology	B/E constitutive; D/R/C/T where dependent care, imposed exposure, public provision, or learned practice matters	J/B/E ; D/R for care; C/T for safe provision and continuity
Endpoint	Usable discrimination of thermal condition for bodily health	A conducive relation sustaining bodily capability

Field	M-24a - <i>sheet-ushna</i>	M-24b - <i>poshan</i>
Criterion	Health and understood purpose rather than pleasantness alone	Continuing bodily function without displaced social or ecological harm
Characteristic distortion	Preference, habituation, or immediate comfort mistaken for safe discrimination	Temporary comfort, over-control, neglect, or resource-intensive consumption counted as nourishment

9.3 Lifecycle conditions

Stage	M-24a - <i>sheet-ushna</i>	M-24b - <i>poshan</i>
Development and receptivity	Functional sensation, attention to bodily signs, climate knowledge, and experience with materials are N/S	Knowledge of health, bodily variation, food, shelter, clothing, tools, and local climate is N/S
Right orientation	Sensation must serve bodily health under cognisance N	Need, health, purpose, and wider material consequence govern selection N
Embodied performance	Sensory integrity, communication, mobility, and means to alter exposure are N/C	Access to food, water, rest, clothing, shelter, care, and suitable tools is N by circumstance
Consequence visibility	Bodily response, task demands, humidity, duration, and delayed injury must be visible N	Health, recovery, workload, energy use, waste, and ecological effects must be visible N
Evaluation	The person's report is indispensable; bodily observation, measurement, and skilled care correct impairment or hidden risk	Person, caregiver, health competence, and affected public or ecological evidence jointly assess conduciveness
Correction	Change exposure, clothing, hydration, workload, shelter, or care; seek skilled assistance where needed	Supply missing conducive units, remove harmful conjunctions, treat injury, repair design, and prevent recurrence
Sustaining	Maintained shelter, safe work, emergency response, and continuing ability to report need are N/S	Reliable provision, maintenance, access independent of domination, and regenerative energy/material use are N/S

Stage	M-24a - <i>sheet-ushna</i>	M-24b - <i>poshan</i>
Transmission	Practical climate, safety, bodily-warning, and first-aid knowledge are S	Care practices, food and housing competence, maintenance, and locally adapted knowledge are S

9.4 Derived micro-spheres and tests

For sheet-ushna to function effectively, the embodied person must be able to discriminate thermal contact for bodily health, with access to relevant knowledge, measurement, communication, protection from imposed exposure, and correction through bodily response and material change.

For poshan to function effectively, persons and caregivers must be able to establish conducive bodily-material relations under criteria of health, agency, and ecological continuity, with reliable provision, maintenance, skilled correction, and transmission of practical competence.

The pair yields **bodily-material conduciveness and protective care**. Direct care is necessary for children and others who cannot regulate exposure or provision independently; public coordination becomes necessary where workplaces, housing, infrastructure, or climate impose shared risks. Neither observation proves one domestic form or technology. The universal requirement is capability for health-serving material adjustment within wider continuity.

10. Cross-pilot sphere model

10.1 What the sixteen records establish

The recoding confirms that the proper field of an activity must be separated into four locations. The **ontological locus** is where the entry is borne. The **field of operation** is the content, body, person, object, relation, or process with which it deals. The **field of consequence** contains the persons, relationships, bodies, collectives, material systems, or future participants affected by its expression. The **field of evidence and evaluation** is where correct operation becomes demonstrable and which standpoints can assess it. *Anubhav* is inward in locus but its claim becomes socially significant through outward evidence; *nyaya* is inward in locus but relational in operation, consequence, and evaluation; *guna* may name the content inspected rather than a second psychological operation; *samriddhi* and *poshan* name material conditions or results that must be assessed by *jeevan*.

No pilot yields a complete social form directly from an activity name. Each yields a bundle of invariants: who must participate, what must be accessible, which result counts, who can eval-

uate it, how contradiction is corrected, and what must persist. This bundle is the appropriate input to sphere clustering.

10.2 Provisional sphere atlas

At this stage the pilot supports eight provisional clusters. Their number follows the contrasts deliberately chosen for the pilot and has no claim to finality.

Sphere	Member records	Recurring topology and endpoint	Constitutive lifecycle requirements
S1 Realised knowing and authentic evidence	A-01a, A-01b	J joined to B/D/C/E/T evidence; reality-grounded knowing made congruent in life	Free inquiry, plural evidence, correction of contradiction, transmission without certification of realisation
S2 Definite understanding and responsible agency	B-02a, B-02b	J/B with affected D/C/E fields; definite acceptance carried into fearless responsibility	Meaningful agency, non-coercion, consequence visibility, distinction of principle from performance failure
S3 Whole-sensitive inquiry and property evidence	C-04a, C-04b	J/B/E , often C/T ; relevant completeness and accurate discrimination	Object access, skill, rival views, records, reproducibility, long-horizon correction
S4 Reciprocal relationship and protected participation	V-12a, V-12b	D constitutive, extending to R/C/E/T ; mutual value-fulfilment and responsive participation	Voice, safety, reciprocity, evaluation, appeal, restoration, protection from concentrated power
S5 Multi-scale fulfilment and living continuity	V-18a, V-18b	J/R/C/E/T ; resolution, sufficiency, participation, examination, and reproduction	Durable shared life, transparent review, dissent, records, reserve, intergenerational learning
S6 Sufficiency and regenerative provision	M-08a, M-08b	B/R/C/E/T ; dependable provision and useful surplus relative to need	Need assessment, skill, means, fair access, safe work, maintenance, reserve, regeneration
S7 Inquiry-led teaching and lived credibility	M-13a, M-13b	D/R/T , tested through B/C/E evidence; learner resolution joined to lived congruence	Learner freedom, teacher competence, demonstration, accountability, safeguarding, succession by competence

Sphere	Member records	Recurring topology and endpoint	Constitutive lifecycle requirements
S8 Bodily-material conduciveness and protective care	M-24a, M-24b	B/E, with D/R/C/T where care or shared risk matters; bodily capability	Health knowledge, material access, care, measurement, safe environments, maintenance, ecological correction

These clusters should be treated as an initial atlas, not eight institutions and not starting centroids for the full analysis. Later records may split S1, merge S1 with S7, place parts of S3 across every material sphere, or reveal entirely new configurations. The atlas will be compared with the anonymized result only after cluster boundaries have been recorded.

10.3 Dependencies among spheres

The spheres are interdependent without becoming one undifferentiated whole. S1 supplies the standard that propositions and conduct answer to realised knowledge rather than authority. S2 carries understood content into responsible action. S3 makes material and empirical consequence inspectable. S4 supplies reciprocal recognition, protected voice, and correction when power disrupts mutuality. S5 tests whether fulfilment persists across close relations, society, nature, and generations. S6 supplies material capability and reserve. S7 reproduces inquiry, understanding, evidence, and competence. S8 maintains the embodied availability through which every outward activity is performed.

This pattern already rules out a simple mapping from five faculties to five institutions. The same sphere draws on several faculties, and one faculty contributes to multiple spheres. It also rules out treating science, governance, culture, or ecology as optional decorations. Disciplined inquiry, public coordination, communication, and ecological consequence appear as recurrent methods or interfaces even before their eventual organisational status is settled.

10.4 How a family-like field begins to emerge

Family was not a coding category, yet a durable close and intergenerational configuration recurs in V-12, V-18, M-08, M-13, and M-24. The recurring requirements are:

- continuing recognition rather than episodic contact;
- responsibility for care across unequal bodily capability;
- shared assessment of need, work, use, and provision;
- daily visibility of congruence between claim and conduct;
- generation, learner development, and transmission of *sanskar*; and
- mutual evaluation with access to outside protection when intimacy conceals harm.

This convergence supports a **durable shared-life sphere**. Calling one institutional form “family” is a plausible later interpretation because generation, care, provision, value-fulfil-

ment, and *sanskar* meet there. The analysis does not yet derive a particular household size, marriage rule, residence pattern, property regime, authority structure, or gendered division of work. The invariant is stronger than individual preference but less specific than a prescribed family form.

10.5 Criteria for institutionalisation

A sphere warrants durable organisation when five conditions converge: its endpoint is recurrent rather than episodic; its lifecycle exceeds one person's unaided capacity; roles or resources must persist through turnover; failure exposes other persons or nature to serious harm; and legitimate correction requires rights, records, or procedures that cannot depend on goodwill alone. On that test, the pilots give the following preliminary result.

Sphere	Durable structure indicated?	Reason, without naming an institution
S1 Realised knowing and authentic evidence	Conditional	Realisation remains personal; open inquiry, public evidence, and transmission require durable protections and learning relations
S2 Definite understanding and responsible agency	Conditional	Understanding is personal; repeated opportunities for responsibility, dissent, and consequence-sensitive correction require maintained practices
S3 Whole-sensitive inquiry and property evidence	Yes for cumulative or high-stakes fields	Instruments, records, peer correction, independence, and long-horizon observation exceed episodic individual inquiry
S4 Reciprocal relationship and protected participation	Yes where power, duration, or public harm is present	Voice, appeal, impartial protection, restoration, and enforceable safeguards must survive individual goodwill
S5 Multi-scale fulfilment and living continuity	Yes	The endpoint explicitly spans durable shared life, wider participation, evaluation, and intergenerational transmission
S6 Sufficiency and regenerative provision	Yes	Distributed skill, tools, infrastructure, reserve, access, maintenance, and ecological cycles require persistent coordination
S7 Inquiry-led teaching and lived credibility	Yes for reliable transmission	Teacher preparation, learner access, safeguards, evidence, and succession must persist beyond one teacher

Sphere	Durable structure indicated?	Reason, without naming an institution
S8 Bodily-material conduciveness and protective care	Yes where dependence or shared risk is present	Continuous care, housing, work safety, infrastructure, emergency response, and access cannot rest on isolated choice

The result is a set of institutional requirements, not a settled institutional count. One durable arrangement may sustain several spheres, while one sphere may require several mutually correcting arrangements.

10.6 The five-function hypothesis remains a later comparison

The proposed functions of education-*sanskar*, justice-security, health-restraint, production-work, and exchange-reserve must now be treated as a hypothesis about how derived spheres could be bundled. The pilot is too small and deliberately contrastive to confirm that exactly five bundles are exhaustive or irreducible. The full analysis must ask:

- whether every derived sphere is maintained by at least one function;
- whether any function merely combines unrelated spheres for convenience;
- whether disciplined inquiry, public coordination, communication, or ecological stewardship has lifecycle requirements not preserved by the five;
- whether the durable shared-life sphere is a foundational relation, an institution, or both; and
- whether different organisational forms can realise the same invariant bundle without loss.

Only after all 122 records are clustered should the five functions be scored as covering, splitting, combining, duplicating, or leaving residual requirements. They must also be compared with other plausible bundles. This preserves the possibility that the five are strongly supported while preventing the method from manufacturing that conclusion or confusing minimality with numerical uniqueness.

11. Refined pass sequence for the full 122-member analysis

The pilot and anatomy register together cover all 122 members, but coverage is not yet a derived social model. The remaining work proceeds through a normalization gate and four further passes.

11.1 Pass one - source and activity anatomy completed

The [Pass-One Anatomy Register](#) completes source checks, entry form, bearer, object, counterpart, endpoint, criterion, pair semantics, and documentary limits for the remaining 106 members. Together with the sixteen pilot records, all 122 column assignments now have ac-

tivity-anatomy records. Institution names were not used as coding categories, and terms naming roles, relationships, objects, bodily processes, properties, conditions, or results were preserved in those forms rather than forced into an operation schema.

11.2 Normalization gate before Pass Two

Convert the 122 records into one stable feature schema. Separate ontological locus, field of operation, field of consequence, and field of evidence. Give each bearer, object, counterpart, endpoint, and criterion its own **D/I/H/O** status. Tag directly named roles, relationships, family terms, and social functions as source-embedded vocabulary so they can be hidden during clustering. Route each member through the lifecycle questions appropriate to its entry form. No new institution claim is made at this gate.

11.3 Pass Two - internal dependencies, lifecycle, and evidence

For every member, first identify which activities or faculties within *jeevan* orient, inform, carry, evaluate, or correct it. Then code development, orientation, performance, consequence visibility, evaluation, correction, sustaining, and transmission according to the member's entry form. Every external condition must state its relation type, lifecycle scope, strength, universality level, and evidential status. Record which evaluators are competent from which standpoints, how disagreement is handled, what correction is available, and what a false positive looks like.

11.4 Pass Three - anonymized, multi-resolution sphere clustering

Freeze the structured feature vector before comparison. Replace member names, faculties, pair positions, pilot sphere names, and institution labels with anonymous IDs. Cluster by recurring locus, topology, endpoint, criterion, lifecycle relation, evidence, evaluator, and correction path. Permit overlapping membership, borderline cases, and outliers. Repeat the analysis at coarse, middle, and fine granularities, vary uncertain fields or weights, and record which clusters remain stable. Restore the hidden labels only after the structural result is fixed, then compare it with faculty structure, pair structure, and the provisional pilot atlas.

11.5 Pass Four - durable functions and comparative institutional bundling

For each stable sphere, test whether durable organisation is required and derive the minimum roles, norms, resources, decision rights, safeguards, and correction mechanisms before assigning an institution name. Compare more than one bundling wherever possible. Score the family and five-function proposal for coverage, residuals, redundancy, forced combination, unnecessary splitting, incompatible purposes, concentrated power, and loss of independent correction. Establish sufficiency and practical minimality separately; neither establishes uniqueness.

11.6 Pass Five - counterfactual and practical validation

Test whether materially different arrangements can fulfil the same invariant. Stress the model under scarcity, coercion, dependency, disagreement, disability, ecological delay, and concentrated technology. Search for compliance, output, prosperity, reputation, or immediate satisfaction that imitates fulfilment while hiding distortion or displaced harm. Require independent access to evidence and a feasible correction path. A surviving counterexample must revise the member coding, sphere boundary, invariant, or institutional bundle rather than being dismissed because it conflicts with the proposal.

The strongest conclusion this method can establish is not that one concrete social arrangement follows uniquely from the number 122. It is that common *jeevan* architecture yields universal functional and relational invariants that every adequate family, educational, productive, scientific, economic, legal, and coordinative arrangement must satisfy. Concrete arrangements form a context-sensitive equivalence class unless further argument rules alternatives out.
