

Research Note: Pilot Dossiers for *Jeevan*, Environment, and Institution

Author: Raghava Mohan Madhwapathi (analyticmadhyasthdarshan.org)

Edited on: August 14, 2026, 12:02 PM IST

Status: Internal research note (not a catalog entry). First completed use of the [activity-to-environment dossier template](#).

Scope: This note applies the dossier method to eight contrasting *bal–shakti* pairs before the remaining fifty-three pairs are analysed. The pilots cover realisation and evidence, acceptance and readiness, an act and its object, justice and participation, social fulfilment and confirmation, prosperity, education, and sensory–bodily discernment. The purpose is both substantive and methodological: to identify defensible external requirements for these activities and to test whether one analytical form can accommodate the nonuniform semantics of the sixty-one-pair inventory.

The analysis does not assume that an institution activates *jeevan*. Each activity is constitutionally present. “Complete functioning” here means that it is effectively available, ordered by realisation and understanding, embodied with adequate competence and means, evidenced in conduct or consequence, mutually evaluable, and capable of correction and continuity. External arrangements can support or obstruct those conditions without becoming the cause of realisation.

1. Method and pilot selection

The source-given pair remains the documentary unit, while each member receives a separate functional analysis. Four evidential statuses are used: **D**, directly stated; **I**, structurally inferred; **P**, institutionally proposed; and **O**, open. External requirements are marked **N**, necessary; **S**, strongly supportive; **C**, context-dependent; **U**, unclear; or **—**, no material relation identified. Institutional relations are marked **P**, primary; **E**, enabling; **X**, cross-cutting; **?**, unresolved candidate; or **—**.

The pilots were chosen to test different semantic forms rather than to represent each faculty proportionally.

Dossier	Pair	Faculty	Principal semantic problem tested
A-01	<i>anubhav–pramanikta</i>	<i>Atma</i>	Realisation and its communicable evidence
B-02	<i>astitva–dhruti</i>	<i>Buddhi</i>	Definite acceptance and readiness for projection
C-04	<i>nireekshan–guna</i>	<i>Chitta</i>	An inspecting activity paired with its object

Dossier	Pair	Faculty	Principal semantic problem tested
V-12	<i>nyaya–samvedna</i>	<i>Vritti</i>	Justice paired with a hybrid of sensitivity, reception, and participation
V-18	<i>tushti–pushti</i>	<i>Vritti</i>	Fulfilment paired with continuing evaluation and transmission
M-08	<i>svayatta–samriddhi</i>	<i>Mun</i>	Experienced prosperity and its material evidence
M-13	<i>guru–pramanik</i>	<i>Mun</i>	A teaching relationship paired with the bearer of evidence
M-24	<i>sheet–ushna / poshan</i>	<i>Mun</i>	Sensory qualities paired with a bodily-material correlate

The full source inventory and its textual cautions remain in [The Sixty-One Activity Pairs of Jeevan](#). The functional distinctions used below follow [A Functional Model of Jeevan](#), especially the separation of orientation, expression, consequence, evaluation, inquiry, and *sanskar*.

2. A-01 — *Anubhav–pramanikta*

2.1 Identity and source record

Field	Entry
Faculty and generic pair	<i>Atma</i> : realisation–authenticity
Pair position	1 of 1
<i>Bal</i> member	<i>Anubhav</i> — realisation in existence
<i>Shakti</i> member	<i>Pramanikta</i> — authenticity associated with ultimate bliss
Entry form	Success condition of knowing / evidential orientation and expression
Primary locations	AVD, p. 91; MVD, pp. 323, 328
Review state	Analysed; primary wording checked; interpretive review pending

Realisation is defined through the eternal presence of nature saturated in Omnipotence. Authenticity is defined through realisation-based expression, communication, and exposition. The pair therefore gives the clearest instance in the pilot set of inward success joined to the orientation by which that success becomes evidence. This relation is directly present in

the definitions, although the claim that every authentic expression is an “output” mechanically generated by realisation would go beyond them.

Working semantic family: held success and outward evidence. **Status:** D for the two definitions; I for treating their conjunction as an inward-to-public evidential relation.

2.2 Separate activity records

Field	<i>Anubhav</i>	<i>Pramanikta</i>
Internal role	Complete acceptance or realisation of coexistence in <i>atma</i>	Orientation to live, communicate, and expound from realisation
Proper field	Existence as coexistence	Human conduct and communication as evidence of realised knowledge
Governing criterion	Agreement with reality, not private conviction	Fidelity between realised content, speech, behaviour, and result
Inward dependency	No more inward faculty is named	Realisation in <i>atma</i>
Outward dependency	Must become effective in <i>buddhi</i> and the outer faculties to guide conduct	Requires the full outward sequence and bodily mediation
Embodied expression	Not reducible to bodily behaviour, though its presence is tested through the later evidence-chain	Truthful explanation, just behaviour, purposeful work, and reproducible experiment where applicable
Principal evidence	Continuing absence of contradiction in realised content; restfulness	Coherence of explanation with conduct, mutual fulfilment, and material consequence
False positive	Certainty, altered state, or inherited belief mistaken for realisation	Eloquence, charisma, institutional office, or moral reputation mistaken for authenticity

The external environment cannot supply *anubhav*. It can, however, provide study, inquiry, examples, freedom from coercive belief, and conditions in which claimed realisation must answer to behaviour and consequence. *Pramanikta* is unintelligible as purely private authenticity because expression, communication, exposition, behaviour, and tradition require other persons and bodily means (MVD, pp. 12, 275–286, 328).

2.3 External requirements

Requirement class	Concrete affordance or protection	Strength	Reason
Epistemic	Access to coherent proposals, sustained study, inquiry, dialogue, and correction	S	These prepare receptivity and test understanding but do not cause realisation
Relational	Persons before whom understanding can be explained and lived without pretence	S	Authenticity becomes evidence in mutuality
Bodily	Health, language, communication, and practical competence	S for evidence; C for realisation itself	The body mediates expression, not the existence of <i>atma</i>
Material	Sufficient time, learning materials, and means for experiment or work	C	Different forms of evidence require different means
Organisational	Freedom to question claims and compare them with conduct and consequence	S	Unaccountable authority can preserve verbal doctrine without evidence
Protective	Freedom from fear, indoctrination, retaliation, and enforced assent	S	Coercion can produce conformity while concealing non-understanding
Ecological	Visibility of the effects of conduct upon the rest of nature	C	Claims of coexistence must not be insulated from material consequences
Intergenerational	An evidence-bearing tradition capable of transmitting method without freezing conclusions into belief	S	<i>Pramanikta</i> includes communication and continuity

2.4 Complete functioning, evidence, and correction

Complete functioning requires more than a report of inner certainty. Realisation must orient the outer faculties; bodily competence must allow expression; conduct must remain open to

the responses of other persons and nature; contradiction must be capable of occasioning renewed inquiry. First-person resolution, consistency over time, just relationship, useful work, and communicable explanation are convergent but non-interchangeable evidence. None alone proves *anubhav*.

The principal correction mechanism is not administrative judgment about another person's inner state. It is the exposure of explanations and conduct to questions, relationship-purpose, practical consequence, and the possibility of revision. An institution can protect that process; it cannot certify realisation by title.

2.5 Family and institutional mapping

Field	Relation	Minimum requirement implied by the pair
Family or durable close relationship	E	A sustained field in which claimed understanding and actual conduct can be compared
Education— <i>sanskar</i>	P	Study, inquiry, dialogue, exemplars, and transition from information to understanding
Justice—security	E	Protection of inquiry and accountability for harm or deception
Health—restraint	E	A body capable of sustained learning and expression
Production—work	E	A field in which understanding becomes competent material evidence
Exchange—reserve	C	Material support for learning and evidence; not intrinsic to the pair
Science and disciplined inquiry	X	Methods for public testing of empirical claims and consequences
Governance and public coordination	X	Protection of open inquiry without licensing an authority to declare realisation
Culture and communication	X	Language and forms through which evidence can be carried
Ecological correctness	X	A check that proclaimed coexistence agrees with treatment of nature
Possible sixth function	—	The irreducibly first-person act of realisation is not another institutional function

2.6 Claim ledger and counter-tests

Claim	Status	Reason and possible revision
Authenticity requires a social field of communication and evidence	I	Follows from the definition; revise if <i>pramanikta</i> is shown to have a wholly non-relational use here
Open inquiry and accountable conduct support authenticity	I	Follows from the evidence chain; they remain enabling rather than sufficient
A public office can certify realisation	O, rejected as unsupported	Neither the pair nor the evidence chain supplies such a rule

All proposed conditions could exist while a person remains without realisation. Conversely, realisation may arise under adverse arrangements, although its safe expression and transmission may be obstructed. The pair therefore supports institutions of opportunity, testing, and protection—not an institutional manufacture of knowledge.

Master-matrix field	Entry
ID	A-01
Pair	<i>anubhav / pramanikta</i>
Semantic family	Success and evidence
Proper field	Coexistence; public expression
Necessary or strong external affordances	Study, inquiry, freedom from coercion, embodied opportunity, accountable consequence
Primary social field	Education— <i>sanskar</i>
Characteristic obstruction	Belief or authority substituted for realisation
Principal evidence	Convergence of explanation, conduct, relationship, and result
Residual need	None institutional; realisation remains personal
Confidence	Medium-high

3. B-02 — *Astitva–dhruti*

3.1 Identity and source record

Field	Entry
Faculty and generic pair	<i>Buddhi</i> : enlightenment–resolve
Pair position	2 of 2
<i>Bal</i> member	<i>Astitva</i> — enlightenment or acceptance of existence
<i>Shakti</i> member	<i>Dhruti</i> — dedication, fearlessness, and readiness for projection
Entry form	Definite acceptance / stable readiness and resolve
Primary locations	AVD, p. 91; MVD, pp. 323, 328–329
Review state	Analysed; primary wording checked; interpretive review pending

The *astitva* definition concerns acceptance free from delusion of state, motion, development, awakening, and the present. *Dhruti* concerns dedication in truth as coexistence, readiness for projection, absence of fear, and trust in the present. The pair directly supports the working classification “accepted content and readiness for projection.” It does not establish that fearlessness means absence of prudent risk-recognition.

3.2 Separate activity records

Field	<i>Astitva</i>	<i>Dhruti</i>
Internal role	Definite acceptance in <i>buddhi</i> of existence and its processes	Continuity and readiness of resolve in accordance with that acceptance
Proper field	Existence, development, awakening, and the present	Decision and projection under understood truth
Governing criterion	Freedom from delusion and agreement with realisation	Steadfastness without fear, stubbornness, or denial of consequence
Inward dependency	Reception of <i>atma</i> ’s indication in absence of ignorance	The accepted content of <i>buddhi</i> and its grounding in <i>atma</i>
Outward dependency	Requires <i>chitta</i> to carry definite meaning	Requires planning, deliberation, selection, and bodily competence

Field	<i>Astitva</i>	<i>Dhruti</i>
Embodied expression	Clear explanation and decisions that preserve the recognised whole	Responsible action under difficulty or uncertainty
Principal evidence	Stable, intelligible definiteness rather than borrowed formula	Continuity between decision and conduct without coercive rigidity
False positive	Dogmatic certainty mistaken for enlightenment	Fearlessness confused with recklessness; obedience or fanaticism confused with resolve

3.3 External requirements

Requirement class	Concrete affordance or protection	Strength	Reason
Epistemic	Study that connects claims, reasons, experience, and consequence	N for reliable development	Borrowed conclusions do not constitute definite understanding
Relational	Trustworthy dialogue in which uncertainty and disagreement can be expressed	S	Fear and status pressure can imitate acceptance
Bodily	Capacity for attention, communication, and sustained action	S for expression	Resolve requires a usable bodily means
Material	Sufficient security and means to act without every decision being captured by immediate survival pressure	S	Chronic precarity can narrow the practical field of resolve
Organisational	Real responsibility, discretion, and visibility of consequences	N for public evidence	Resolve cannot be tested where persons are denied meaningful agency
Protective	Absence of coercion, arbitrary punishment, and manufactured fear	N for trustworthy evidence	Forced compliance is not <i>dhruti</i>
Ecological	Access to the long consequences of decisions	C	Required when resolve concerns production or natural systems

Requirement class	Concrete affordance or protection	Strength	Reason
Intergenerational	Practices that cultivate inquiry, courage, and responsible commitment rather than submission	S	Repeated educational relations shape receptivity and <i>sanskar</i>

3.4 Complete functioning, evidence, and correction

Effective *astitva* requires ignorance-free reception from *atma*; *dhruti* requires that definiteness remain available for outward activity. External freedom is not the same as inward freedom from fear, but conditions of intimidation make the evidence ambiguous. Adequate organisation therefore protects dissent and supplies real responsibility, while evaluating decisions by their reasons and consequences rather than by confidence alone.

Correction requires a setting in which a person can distinguish a failure of principle from a failure of planning, skill, means, or timing. Otherwise adverse results may harden into dogma or just resolve may be abandoned because embodiment was incompetent.

3.5 Family and institutional mapping

Field	Relation	Minimum requirement implied by the pair
Family or durable close relationship	E	Trust, responsibility, and room to give reasons without fear
Education— <i>sanskar</i>	P	Development of definite understanding, inquiry, and responsible resolve
Justice—security	E	Protection from coercion and arbitrary consequence
Health—restraint	E	Bodily and mental availability for sustained attention and action
Production—work	E	Real decisions through which resolve becomes practical evidence
Exchange—reserve	C	Reduction of dependency that can make assent economically coerced
Science and disciplined inquiry	X	Testing of factual beliefs and consequences
Governance and public coordination	X	Distribution of responsibility and protection of reasoned dissent

Field	Relation	Minimum requirement implied by the pair
Culture and communication	X	Norms that distinguish courage from aggression and resolve from rigidity
Possible sixth function	—	No residual institutional function is yet required

3.6 Claim ledger and counter-tests

Claim	Status	Reason and possible revision
Meaningful agency is necessary for <i>dhruti</i> to become publicly evident	I	Without choice, observed compliance underdetermines resolve
Material security strongly supports fearless decision	I	It removes one source of compulsion but cannot remove inward fear by itself
Fearlessness licenses disregard for risk	O, rejected as inconsistent	The pair concerns truth-grounded dedication, not impulsiveness

An authoritarian school may produce decisive speech without *astitva* or *dhruti*. A person may retain resolve under danger, showing that safety is enabling rather than sufficient. The universal requirement is therefore not comfort but protected inquiry, meaningful responsibility, and evaluation of consequence.

Master-matrix field	Entry
ID	B-02
Pair	<i>astitva</i> / <i>dhruti</i>
Semantic family	Acceptance and readiness
Proper field	Existence; responsible decision
Necessary or strong external affordances	Study, non-coercion, meaningful agency, consequence visibility
Primary social field	Education— <i>sanskar</i>
Characteristic obstruction	Dogma, fear, or obedience presented as resolve
Principal evidence	Reasoned definiteness sustained in responsible action
Residual need	None
Confidence	High

4. C-04 — *Nireekshan–guna*

4.1 Identity and source record

Field	Entry
Faculty and generic pair	<i>Chitta</i> : contemplation–visualisation
Pair position	4 of 8
<i>Bal</i> member	<i>Nireekshan</i> — inspection
<i>Shakti</i> member	<i>Guna</i> — properties or relative motions
Entry form	Cognitive act / object or content of assessment
Primary locations	AVD, p. 92; MVD, pp. 327, 330
Review state	Analysed; pair relation remains partly open

Inspection is a realisation-based holistic view manifesting as a conjunction of contemplation and visualisation. *Guna* is defined through relative motions and their assessment as generative, degenerative, or mediative. The source columns place the two together but do not explain *guna* as a motion generated by *nireekshan*. The narrowest defensible relation is act and object: inspection considers properties or relative motions. **Status:** D for position and definitions; I for the act–object classification; O for any stronger directional semantics.

4.2 Separate activity records

Field	<i>Nireekshan</i>	<i>Guna</i>
Internal role	Holistic inspection in which understood reality informs contemplation and visualisation	The properties or relative motions made available for assessment
Proper field	Units, processes, relationships, and their place in a whole	Generative, degenerative, and mediative motion or effect
Governing criterion	Completeness of view, fidelity to the object, and connection between meaning and observation	Accurate discrimination of the relevant relative motions
Inward dependency	<i>Buddhi</i> ’s definite understanding	The classification must remain governed by the meaning sought in inspection

Field	<i>Nireekshan</i>	<i>Guna</i>
Outward dependency	<i>Vritti</i> must analyse and <i>mun</i> must select appropriate observation or action	Requires sensory contact, measurement, comparison, and language for public use
Embodied expression	Observation, modelling, design review, diagnosis, and explanation	Recorded property, measured pattern, or defensible qualitative classification
Principal evidence	Relevant features are neither omitted nor detached from the whole	Independent observations and consequences agree with the property judgment
False positive	Accumulation of data mistaken for holistic inspection	A label or metric mistaken for the property itself

4.3 External requirements

Requirement class	Concrete affordance or protection	Strength	Reason
Epistemic	Access to objects, observations, rival explanations, records, and methods of comparison	N	Inspection cannot operate responsibly on concealed or fabricated information
Relational	Collaboration across different skills and perspectives	S	Holistic assessment often exceeds one observer's competence
Bodily	Sensory access, attention, mobility where needed, and usable instruments	N or S by field	Embodied observation mediates most public evidence
Material	Instruments, laboratories, field access, archives, and design tools	C	Required according to the object under inspection
Organisational	Transparency, reproducibility, conflict-of-interest controls, and time for review	S	Incentives can narrow the question or suppress unwelcome properties
Protective	Freedom to report degenerative effects without retaliation	S	Property assessment becomes unreliable when results are selected by power

Requirement class	Concrete affordance or protection	Strength	Reason
Ecological	Observation across material cycles and delayed consequences	N for ecological objects	Short boundaries can misclassify extractive activity as generative
Intergenerational	Preservation of observations, methods, failures, and conceptual distinctions	S	Inspection improves through cumulative correction

4.4 Complete functioning, evidence, and correction

The pair requires both an understood purpose and disciplined contact with the object. A holistic intention without empirical competence produces speculation; measurement without the meaning of the whole produces fragmentation. Correction comes from repeated observation, independent scrutiny, comparison with prediction and consequence, and revision of the model or classification.

The pair also exposes a limit in the word “activity.” *Nireekshan* names an act of *jeevan*, whereas *guna* in the definition names what is inspected. The dossier must therefore record the bearer of a term before assigning psychological or institutional requirements to it.

4.5 Family and institutional mapping

Field	Relation	Minimum requirement implied by the pair
Family or durable close relationship	C	Everyday observation and evaluation, without making the household sufficient for specialised inquiry
Education— <i>sanskar</i>	P	Training in observation, meaning, comparison, and intellectual honesty
Justice—security	E	Protection against concealment and retaliation; standards of evidence in disputes
Health—restraint	E	Diagnostic observation and access to bodily evidence
Production—work	E	Design, quality, safety, and evaluation of material effects
Exchange—reserve	C	Traceability and information about qualities of circulated goods
Science and disciplined inquiry	X	A primary cross-cutting method for observation, measurement, and correction
Governance and public coordination	X	Disclosure requirements and stewardship of shared evidence

Field	Relation	Minimum requirement implied by the pair
Culture and communication	X	Language and representations adequate to observed properties
Ecological correctness	X	Expansion of the field to delayed and distributed consequences
Possible sixth function	?	Test whether organised knowledge-production is fully cross-cutting or warrants a distinct function

4.6 Claim ledger and counter-tests

Claim	Status	Reason and possible revision
The pair is best read as act and object	I	Fits both definitions but is not named as a source category
Open, reproducible inquiry strongly supports complete inspection	I	It supplies correction without making method alone sufficient for holistic meaning
Science is necessarily a sixth institution	O	The pilot shows an irreducible method; it does not yet show an irreducible social function

A well-equipped laboratory can still inspect under a narrow or destructive purpose. A careful observer with minimal equipment may recognise important properties. Therefore tools are conditional, while access to the object, honesty about consequence, and corrigibility are more general requirements.

Master-matrix field	Entry
ID	C-04
Pair	<i>nireekshan / guna</i>
Semantic family	Act and object
Proper field	Holistic inspection of relative motions
Necessary or strong external affordances	Object access, empirical competence, transparency, reproducibility, long consequence horizon
Primary social field	Education with science as a cross-cutting method
Characteristic obstruction	Fragmentation, data suppression, or metric substitution
Principal evidence	Repeatable observation integrated with meaning and consequence

Master-matrix field	Entry
Residual need	Status of organised science remains open
Confidence	Medium-high

5. V-12 — *Nyaya–samvedna*

5.1 Identity and source record

Field	Entry
Faculty and generic pair	<i>Vritti</i> : deliberation–analysis
Pair position	12 of 18
<i>Bal</i> member	<i>Nyaya</i> — justice
<i>Shakti</i> member	<i>Samvedna</i> — sensitivity
Entry form	Relational evaluation / hybrid readiness, reception, and participation
Primary locations	AVD, p. 92; MVD, pp. 335–336
Review state	Analysed; pair relation remains nonuniform

Justice comprises recognition of relationships, fulfilment of their values, evaluation, and mutual satisfaction. Sensitivity is defined through movement towards completeness, work, behaviour, and thought under law, inquiry and expectation toward awakening, reception of external indications through the cognitive organs, and readiness for participation in orderliness. The pair does not reduce to justice followed by an emotional response. Its second member joins sensory reception, motivated participation, and responsiveness to a recognised whole.

Working semantic family: relationship and evaluative participation, with a residual sensory-receptive clause. **Status:** D for the definitions; I for the functional grouping; O for a single relation covering every clause of *samvedna*.

5.2 Separate activity records

Field	<i>Nyaya</i>	<i>Samvedna</i>
Internal role	Deliberative recognition of relationship, value, evaluation, and mutual fulfilment	Responsiveness and readiness to participate on the basis of received indications and the movement toward completeness

Field	<i>Nyaya</i>	<i>Samvedna</i>
Proper field	Human relationships and associations	Persons, bodily indications, public conditions, and orderliness
Governing criterion	Relationship-purpose, value-fulfilment, mutual satisfaction, and freedom from harm	Cognisance rather than sensation alone; participation ordered toward completeness
Inward dependency	Meaning supplied by <i>chitta</i> and ultimately by understanding	Justice and other <i>vritti</i> criteria must govern received indications
Outward dependency	<i>Mun</i> must taste values and select just conduct	Requires sensory access, communication, motivation, and bodily action
Embodied expression	Recognition, fulfilment, evaluation, protection, and restoration	Attention, inquiry, response, participation, and willingness to act
Principal evidence	Both parties can recognise value-fulfilment without coercion; third parties are not harmed	Relevant indications are noticed and produce responsible participation
False positive	Silence, obedience, legal form, or unilateral benefit mistaken for mutual satisfaction	Emotional reactivity, surveillance, or sensory stimulation mistaken for sensitivity

5.3 External requirements

Requirement class	Concrete affordance or protection	Strength	Reason
Epistemic	Shared understanding of relationships, values, procedures, facts, and consequences	N	Evaluation cannot be just when parties lack intelligible grounds
Relational	Durable recognition, reciprocal voice, and opportunity to fulfil responsibilities	N	Justice exists only in relationship and association
Bodily	Safety, communication access, and capacity to participate	N for public evidence	Threat or incapacity can turn apparent agreement into silence
Material	Access to the means needed to fulfil a relationship's legitimate expectations	S	Formal recognition without practical means may remain empty

Requirement class	Concrete affordance or protection	Strength	Reason
Organisational	Accessible evaluation, transparent reasons, participation of affected persons, appeal, and correction	N at social scale	Mutual evaluation requires more than unilateral judgment
Protective	Freedom from crime, injustice, retaliation, domination, and concealed conflicts of interest	N	The reception conditions explicitly connect outer accord with crime-free and just conditions
Ecological	Inclusion of affected persons and natural systems beyond the immediate parties	C or N by case	Local satisfaction can externalise harm
Intergenerational	Education in relationship-recognition and preservation of fair procedures without rigidifying them	S	Just practice must be carried and corrected across generations

5.4 Complete functioning, evidence, and correction

Mutual satisfaction is necessary but not reducible to reported contentment. Habituation, dependency, intimidation, and unequal access to information can produce assent. Adequate evidence combines first-person report with freedom from coercion, recognition of relationship-purpose, fulfilment of values, material consequence, third-party effects, and a real possibility of revision.

Correction requires a graded ecology: direct dialogue where safe, family or community mediation where appropriate, and impartial protection or adjudication where power or harm prevents mutual evaluation. Restorative arrangements are desirable when they restore relationship and responsibility; protective separation remains necessary where restoration would expose a person to continuing harm.

5.5 Family and institutional mapping

Field	Relation	Minimum requirement implied by the pair
Family or durable close relationship	P	The first sustained field of recognition, value-fulfilment, evaluation, and care
Education— <i>sanskar</i>	E	Understanding relationships, values, inquiry, and non-coercive disagreement

Field	Relation	Minimum requirement implied by the pair
Justice–security	P	Accessible evaluation, protection, restoration, appeal, and accountability
Health–restraint	E	Bodily safety and capacity to participate
Production–work	E	Just roles, safe conditions, responsibility for material consequences
Exchange–reserve	E	Non-exploitative terms and access necessary for genuine participation
Science and disciplined inquiry	X	Reliable factual evidence, including evidence of harm
Governance and public coordination	X	Procedures for conflicts that exceed immediate relationships
Culture and communication	X	Public norms of respect, truthful speech, and civil disagreement
Ecological correctness	X	Protection against agreement that shifts cost to nature or future persons
Possible sixth function	—	Adjudication and public protection remain within justice–security; governance coordinates them

5.6 Claim ledger and counter-tests

Claim	Status	Reason and possible revision
Justice requires a social field, not private intention alone	D/I	Recognition, fulfilment, evaluation, and mutual satisfaction are relational by definition
Participants require protected voice and access to correction	I	Without them mutual satisfaction is evidentially underdetermined
Every just outcome must preserve an existing relationship	O, rejected as too strong	Protection may require distance or termination of a harmful association

A benevolent hierarchy can provide material benefit while denying recognition and evaluation. A procedurally equal forum can still be unjust if parties lack bodily safety, information, or means. The pair therefore derives both relational culture and protective public structure.

Master-matrix field	Entry
ID	V-12
Pair	<i>nyaya / samvedna</i>
Semantic family	Relationship and evaluative participation
Proper field	Human relationship and orderliness
Necessary or strong external affordances	Recognition, protected voice, material means, mutual evaluation, appeal, third-party review
Primary social field	Family and justice–security
Characteristic obstruction	Coercion, unilateral judgment, formalism, or externalised harm
Principal evidence	Mutual satisfaction plus freedom, value-fulfilment, and consequence
Residual need	None
Confidence	High

6. V-18 — *Tushti–pushti*

6.1 Identity and source record

Field	Entry
Faculty and generic pair	<i>Vritti</i> : deliberation–analysis
Pair position	18 of 18
<i>Bal</i> member	<i>Tushti</i> — satiation or fulfilment
<i>Shakti</i> member	<i>Pushti</i> — confirmation
Entry form	Achieved social condition / continuing evaluation and dissemination
Primary locations	AVD, p. 92; MVD, pp. 338–339
Review state	Analysed; primary wording checked; interpretive review pending

Tushti is defined through the six merits after understanding, evidence of resolution and prosperity in the family, and participation in undivided society and universal orderliness. *Pushti* is continuous evaluation of that satiation through inspection and examination, continuity of completeness, and dissemination in the human tradition. The pair therefore explicitly joins

achievement, evaluation, continuity, and social transmission. It is the strongest pilot evidence that complete activity requires an environment of correction and not merely an environment of initial expression.

Working semantic family: fulfilled condition and its continuing confirmation or transmission. **Status:** D.

6.2 Separate activity records

Field	<i>Tushti</i>	<i>Pushti</i>
Internal role	Deliberative recognition of fulfilled resolution, prosperity, merit, and participation	Continued inspection, examination, confirmation, and dissemination of fulfilment
Proper field	Person, family, society, and universal orderliness together	The continuity and public reproducibility of that fulfilment
Governing criterion	Understanding expressed as resolution, prosperity, participation, and completeness	Continuing agreement under evaluation, not preservation of a claim by authority
Inward dependency	Meaning and purpose from <i>chitta</i> , definiteness from <i>buddhi</i> , and realisation	The content of <i>tushti</i> and the criteria by which it is examined
Outward dependency	Must organise selection, relationship, work, and participation	Requires communication, institutions of evaluation, and human tradition
Embodied expression	Resolved family conduct, assessed sufficiency, and participation in wider order	Inspection, transparent evaluation, teaching, replication, and correction
Principal evidence	Convergence of resolution, prosperity, and social participation	The achievement persists under examination and becomes available beyond its originators
False positive	Private contentment or affluence mistaken for social fulfilment	Propaganda, ritual repetition, or institutional longevity mistaken for confirmation

6.3 External requirements

Requirement class	Concrete affordance or protection	Strength	Reason
Epistemic	Shared criteria for resolution, prosperity, participation, inspection, and examination	N	Confirmation requires intelligible public evaluation
Relational	Stable family and social relations in which fulfilment can persist and be mutually assessed	N	The definition itself spans family and society
Bodily	Health and practical capacity for continuing participation	S	A merely verbal tradition cannot preserve embodied fulfilment
Material	Reliable access to necessities and productive means sufficient for prosperity	N	Family prosperity is explicit in <i>tushti</i>
Organisational	Transparent records, periodic review, participation, feedback, and revision	N	<i>Pushti</i> is continuous evaluation rather than a one-time declaration
Protective	Freedom to report contradiction, exclusion, deprivation, or failure	N	Confirmation loses meaning if dissent is punished
Ecological	Evidence that present prosperity preserves later material possibility	N for continuity	A depleting arrangement cannot establish durable completeness
Intergenerational	Transmission through lived practice, education, and institutions that can be corrected	N	Dissemination in human tradition is explicit in <i>pushti</i>

6.4 Complete functioning, evidence, and correction

This pair resists individualistic evidence. A person cannot establish *tushti* solely by reporting satisfaction when family relationships remain unresolved, material provision is insecure, or social participation is blocked. Nor can an institution establish *pushti* by repeating a founding claim. The activity requires longitudinal, multi-level evidence: first-person resolution, mutual family evaluation, material sufficiency, participation beyond the family, public inspection, and intergenerational reproducibility.

Correction must be structurally normal rather than treated as disloyalty. Participants need access to the criteria, records, affected persons, and consequences being examined. A tradition remains living when it can distinguish its purpose from a particular procedure and revise the latter while retaining the former.

6.5 Family and institutional mapping

Field	Relation	Minimum requirement implied by the pair
Family or durable close relationship	P	Evidence of resolution and prosperity in sustained daily life
Education— <i>sanskar</i>	P	Transmission of understanding, evaluative criteria, and learned correction
Justice—security	P	Conditions for participation, mutual evaluation, dissent, and protection
Health—restraint	E	Continuing bodily capability and disciplined need
Production—work	P	Material evidence of sufficiency and useful participation
Exchange—reserve	P	Continuity of provision across families, places, and time
Science and disciplined inquiry	X	Inspection, examination, longitudinal evidence, and detection of unintended effects
Governance and public coordination	X	Participation and correction across scales
Culture and communication	X	Dissemination without reducing understanding to slogans
Ecological correctness	X	Durability of prosperity and production
Possible sixth function	—	All five functions are jointly implicated; evaluation and transmission cross them

6.6 Claim ledger and counter-tests

Claim	Status	Reason and possible revision
<i>Tushti–pushti</i> requires all five institutional functions in joint operation	I	Family resolution, prosperity, participation, evaluation, and tradition jointly invoke them

Claim	Status	Reason and possible revision
Institutional self-report is insufficient evidence of confirmation	I	Continuous inspection and examination require independent access to consequence
Dissemination requires one uniform organisational form	O, rejected as unsupported	The content and criteria may be universal while institutional forms vary

A small family may embody resolution and prosperity without participating adequately in wider order; a large public system may disseminate terminology without family-level evidence. Neither satisfies the whole definition. No sixth function is yet required, but the pair makes cross-institutional evaluation indispensable.

Master-matrix field	Entry
ID	V-18
Pair	<i>tushti / pushti</i>
Semantic family	Fulfilment and confirmation
Proper field	Family-to-universal continuity
Necessary or strong external affordances	Shared criteria, prosperity, participation, transparent review, dissent, intergenerational transmission
Primary social field	Joint operation of all five functions
Characteristic obstruction	Private satisfaction, propaganda, or uncorrectable tradition
Principal evidence	Longitudinal convergence across person, family, society, material provision, and ecology
Residual need	None yet
Confidence	High

7. M-08 — *Svayatta–samriddhi*

7.1 Identity and source record

Field	Entry
Faculty and generic pair	<i>Mun</i> : taste–selection
Pair position	8 of 32

Field	Entry
<i>Bal</i> member	<i>Svayatta</i> — self-reliance or the realisation of prosperity
<i>Shakti</i> member	<i>Samriddhi</i> — prosperity as production more than needs
Entry form	Experienced sufficiency / material and productive evidence
Primary locations	AVD, p. 93; MVD, p. 341
Review state	Analysed; translation of <i>svayatta</i> requires continued review

Svayatta is defined as the realisation or experience of prosperity; *samriddhi* as production more than needs. The first term is commonly glossed “self-reliance,” but its definition here is narrower and should govern: the experienced certainty of material sufficiency. The second member supplies a material criterion, yet “more than needs” cannot be evaluated without a prior understanding of need. It does not by itself license indefinite production, accumulation, or disposal.

Working semantic family: held condition and material evidence. **Status:** D for the definitions; I for interpreting the pair as experienced and produced sufficiency; O for the full semantic range of *svayatta*.

7.2 Separate activity records

Field	<i>Svayatta</i>	<i>Samriddhi</i>
Internal role	Taste or acceptance of dependable sufficiency	Selection and organisation of production beyond assessed need
Proper field	Family confidence regarding material provision	Useful material production in relation to finite need
Governing criterion	Absence of experienced lack grounded in actual capability and provision	Quantity, quality, usefulness, accessibility, and regeneration relative to assessed need
Inward dependency	Justice, <i>dharma</i> , truth, and understood purpose must govern the taste of sufficiency	Deliberation must distinguish need from indulgence, prestige, and accumulation
Outward dependency	Bodily and family participation make sufficiency concrete	Skill, labour, tools, natural resources, storage, and circulation are required
Embodied expression	Confident use and sharing without fear-driven accumulation	Competent, useful, regenerative production with an available surplus

Field	<i>Svayatta</i>	<i>Samriddhi</i>
Principal evidence	Needs are met with dependable capability, not merely temporary possession	Useful provision exceeds assessed family need and remains available without exploitation
False positive	Wealth, stockpiles, income, dependency on fragile supply, or status mistaken for self-reliance	Gross output, waste, forced labour, ecological depletion, or unsold surplus mistaken for prosperity

7.3 External requirements

Requirement class	Concrete affordance or protection	Strength	Reason
Epistemic	Shared methods for assessing need, production, use, stocks, and consequences	N	Neither sufficiency nor surplus is intelligible without assessment
Relational	Family cooperation, fair responsibility, and confidence that vulnerability will not lead to abandonment	N for family prosperity	Individual holdings do not establish shared sufficiency
Bodily	Health, skill, rest, safety, and opportunity for useful work	N	Production is embodied evidence
Material	Secure access to appropriate tools, land or inputs, infrastructure, and useful outputs	N	The pair explicitly includes production
Organisational	Participation in need assessment, work allocation, quality control, and decisions about surplus	S	Unilateral control can produce output while preserving dependency
Protective	Freedom from dispossession, exploitative exchange, artificial scarcity, and forced work	N for trustworthy evidence	Surplus obtained through another's deprivation contradicts wider prosperity
Ecological	Regeneration of soils, water, energy, materials, and waste-absorbing capacity	N for continuity	Depletion converts present surplus into future lack

Requirement class	Concrete affordance or protection	Strength	Reason
Intergenerational	Transmission of productive knowledge, maintenance, reserve, and access to means	S or N by field	Prosperity must survive changes of persons and seasons

7.4 Complete functioning, evidence, and correction

The pair becomes fully operative when the taste of sufficiency corresponds to actual, competent, and durable provision. Subjective confidence without material capability is fragile; output without shared confidence, right use, or access is not prosperity in the relevant sense. Correction therefore joins household need assessment, production records, health and workload, distribution, reserve, and ecological consequence.

The appropriate unit of assessment is initially the family because needs, care, work, and provision are lived together there. Wider structures remain necessary because skills, materials, seasons, risks, and productive capacities are distributed across families.

7.5 Family and institutional mapping

Field	Relation	Minimum requirement implied by the pair
Family or durable close relationship	P	Joint assessment of need, capability, work, use, and surplus
Education— <i>sanskar</i>	E	Productive competence, need-discipline, right use, and ecological understanding
Justice—security	E	Secure access, fair responsibility, and protection from exploitation or dispossession
Health—restraint	E	Bodily capability and limitation of need without neglect
Production—work	P	Creation, maintenance, and evaluation of useful provision
Exchange—reserve	P	Circulation and preservation of surplus across place, skill, and time
Science and disciplined inquiry	X	Measurement, design, safety, productivity, and ecological evaluation
Governance and public coordination	X	Shared infrastructure, resource stewardship, and correction of concentrated control
Culture and communication	X	Norms of sufficiency, competence, contribution, and non-accumulation

Field	Relation	Minimum requirement implied by the pair
Ecological correctness	X	Regeneration as a condition of continuing prosperity
Possible sixth function	—	Infrastructure and resource stewardship can be coordinated across production, exchange, justice, and governance

7.6 Claim ledger and counter-tests

Claim	Status	Reason and possible revision
Prosperity requires production assessed against finite need	D/I	Both elements are explicit; the method of need assessment remains open
Family is the first unit of prosperity assessment	I	Supported by the wider account and by the relation of need and shared provision; not uniquely entailed by this pair alone
More production is always more prosperity	O, rejected as inconsistent	Usefulness, need, access, and continuity constrain the quantitative clause

A wealthy person surrounded by deprivation does not establish social prosperity. A low-output family with reliably met needs may experience sufficiency but lacks the source-defined surplus needed for *samriddhi*. The pair therefore requires both qualitative need-assessment and material capability.

Master-matrix field	Entry
ID	M-o8
Pair	<i>svayatta / samriddhi</i>
Semantic family	Experienced condition and material evidence
Proper field	Family sufficiency and production
Necessary or strong external affordances	Need assessment, productive means, skill, fair access, reserve, regenerative limits
Primary social field	Family, production–work, and exchange–reserve
Characteristic obstruction	Accumulation, dependency, exploitation, waste, or depletion counted as prosperity
Principal evidence	Needs met plus useful, accessible, durable surplus

Master-matrix field	Entry
Residual need	None
Confidence	High on function; medium on translation

8. M-13 — *Guru–pramanik*

8.1 Identity and source record

Field	Entry
Faculty and generic pair	<i>Mun</i> : taste–selection
Pair position	13 of 32
<i>Bal</i> member	<i>Guru</i> — the person who establishes conception as resolution of inquiries through education– <i>sanskar</i>
<i>Shakti</i> member	<i>Pramanik</i> — authentic bearer and carrier of evidence
Entry form	Relationship-role / qualification of the evidence-bearing person
Primary locations	AVD, p. 93; MVD, p. 343
Review state	Analysed; pair relation inferred from adjoining definitions

The entry *guru* denotes a person in a relationship, not merely an inner event. The role is defined by resolving inquiries and questions through education–*sanskar*. *Pramanik* denotes the bearer and carrier of evidence who lives the holistic view of existence, knowledge of *jeevan*, and humane conduct through experiment, behaviour, and realisation. Their pairing places teaching beside lived evidence. It does not make every person holding a teaching office authentic.

Working semantic family: relationship-role and evidential qualification. **Status:** D for definitions and assignment; I for treating *pramanik* as a necessary qualification of the teaching relation.

8.2 Separate activity records

Field	<i>Guru</i>	<i>Pramanik</i>
Internal role	Recognition and fulfilment of the teaching relationship in response to inquiry	Taste and selection ordered by responsibility to live as evidence

Field	Guru	Pramanik
Proper field	Teacher–learner relationship, questions, conception, and resolution	Experiment, behaviour, realisation, and communicable humane conduct
Governing criterion	The learner’s movement from question to understood resolution	Agreement among explanation, experiment, behaviour, and realisation
Inward dependency	Understanding, contemplation, deliberation, justice, and kindness	The full inner-to-outer evidence chain
Outward dependency	Language, listening, teaching skill, time, learner receptivity, and bodily presence or mediation	Repeated conduct across family, work, relationship, and public life
Embodied expression	Dialogue, demonstration, responding to questions, and adapting presentation without altering truth	Living the proposed knowledge in observable work and behaviour
Principal evidence	The learner can understand, question, apply, and explain rather than merely repeat	Claims remain coherent across teaching, relationship, experiment, and consequence
False positive	Status, age, lineage, fluency, control of a school, or learner obedience mistaken for being a guru	Reputation, performance, or selective public conduct mistaken for authenticity

8.3 External requirements

Requirement class	Concrete affordance or protection	Strength	Reason
Epistemic	A coherent body of study, learner questions, dialogue, demonstration, and access to evidence	N	The role is constituted through resolution of inquiry
Relational	Voluntary recognition, trust, responsibility, patience, and reciprocity between teacher and learner	N	Office alone does not establish the relationship
Bodily	Health, communication access, teaching skill, and practical demonstration	S	Education and evidence are embodied

Requirement class	Concrete affordance or protection	Strength	Reason
Material	Time, learning spaces, texts, tools, and support not conditioned on intellectual submission	S	Dependence can corrupt inquiry
Organisational	Teacher accountability, learner voice, plural access to evidence, and separation of guidance from unchecked control	N for durable practice	Authority can convert education into conformity
Protective	Safeguards against coercion, exploitation, secrecy, retaliation, and personality cults	N	These can counterfeit trust and authenticity
Ecological	Opportunity to test claims of right use and coexistence in actual material practice	C	Relevant to the practical evidence of the teaching
Intergenerational	Preparation of new competent teachers through understanding and evidence rather than succession by status	N	Education— <i>sanskar</i> is a continuity relation

8.4 Complete functioning, evidence, and correction

The teacher's evidence and the learner's understanding must remain distinguishable. A learner's failure does not by itself disprove the teacher; a teacher's eloquence does not establish learning. Adequate evaluation examines the intelligibility of the proposal, responsiveness to inquiry, the teacher's conduct, the learner's freedom, actual assimilation, and subsequent evidence.

Correction requires that the relationship permit questions about both content and conduct. Complaints about harm or misuse of authority need access to persons outside the immediate teaching relation. At the same time, public procedure should not replace the learner's own inquiry with credentialing or majority opinion.

8.5 Family and institutional mapping

Field	Relation	Minimum requirement implied by the pair
Family or durable close relationship	E	Early inquiry, care, exemplarity, and protection of the learner's dignity
Education— <i>sanskar</i>	P	The primary organised field of the pair

Field	Relation	Minimum requirement implied by the pair
Justice–security	E	Protection against abuse of authority and access to fair correction
Health–restraint	E	Bodily availability and care within demanding study or practice
Production–work	E	Practical demonstration and competence rather than verbal instruction alone
Exchange–reserve	E	Material support for education without exploitative dependency
Science and disciplined inquiry	X	Public evidence and methods for testing empirical instruction
Governance and public coordination	X	Safeguards, access, and accountability without declaring doctrinal truth by office
Culture and communication	X	Language, memory, arts, and norms of respectful inquiry
Ecological correctness	C	A practical test where teaching concerns coexistence with nature
Possible sixth function	—	The teacher–learner relation lies within education; public safeguards lie within justice and governance

8.6 Claim ledger and counter-tests

Claim	Status	Reason and possible revision
Lived evidence is integral to the qualification of a guru	I	Strongly supported by the pairing and definition of <i>pramanik</i> ; the exact logical force remains unstated
Learner freedom and teacher accountability are necessary institutional safeguards	I/P	They follow from the need to distinguish understanding from coercive conformity
Certification alone can establish a guru	O, rejected as unsupported	The definition is functional and evidential, not titular

A humane school structure can contain teachers who lack understanding; an authentic teacher may teach under poor institutional conditions. The structure is therefore neither sufficient nor irrelevant. It must protect inquiry, expose teaching to evidence, and prevent relational dependence from becoming domination.

Master-matrix field	Entry
ID	M-13
Pair	<i>guru / pramanik</i>
Semantic family	Relationship-role and evidential qualification
Proper field	Education and lived evidence
Necessary or strong external affordances	Inquiry, trust, learner freedom, teacher accountability, demonstration, intergenerational preparation
Primary social field	Education– <i>sanskar</i>
Characteristic obstruction	Status, obedience, secrecy, or charisma replacing understanding
Principal evidence	Learner assimilation joined to coherence of teaching, conduct, experiment, and realisation
Residual need	None
Confidence	Medium-high

9. M-24 — *Sheet–ushna / poshan*

9.1 Identity and source record

Field	Entry
Faculty and generic pair	<i>Mun</i> : taste–selection
Pair position	24 of 32; second in the sensory and work-organ subgroup
<i>Bal</i> member	<i>Sheet–ushna</i> — cold and hot
<i>Shakti</i> member	<i>Poshan</i> in the table — nourishing; the detailed definition contrasts nourishing and depleting
Entry form	Sensory-material qualities / bodily-material relation and result
Primary locations	AVD, pp. 93–94; MVD, pp. 347–348
Review state	Analysed; table-to-definition relation retained as a textual variant

Cold and hot are defined through nurturing or depriving contact. The sensory group further states that sensations serve the maintenance of bodily health, and defines nourishing as a

unit joined with a conducive unit, against depletion as lack of a conducive unit or conjunction with an unconductive one. The AVD table gives *poshan* in the *shakti* column, while the detailed passage works with a *poshan–shoshan* contrast. The source therefore supports a relation between thermal discrimination and bodily-material conduciveness without reducing it to a fixed temperature preference.

Working semantic family: sensory quality and bodily-material correlate. **Status:** D for the entries and health-purpose; I for treating thermal discrimination as information for selecting nourishing conditions; O for a more exact *bal–shakti* direction.

9.2 Separate activity records

Field	<i>Sheet–ushna</i>	<i>Poshan</i>
Internal role	Taste and discrimination of thermal contact through bodily sensation	Selection or recognition of a conducive relation that supports bodily function
Proper field	Temperature and thermal interaction among body, objects, food, air, and surroundings	The relation between a unit and conducive or unconductive units
Governing criterion	Bodily health under cognisance, not pleasantness alone	Nourishment and continuing bodily capability rather than immediate comfort
Inward dependency	<i>Vritti</i> must evaluate sensation through health, justice, <i>dharma</i> , and truth in the relevant case	Need, health, purpose, and knowledge of material consequence must govern selection
Outward dependency	Sensory organs, nervous and bodily response, attention, and opportunity to act	Clothing, shelter, food preparation, tools, care, and environmental control where needed
Embodied expression	Recognition and communication of cold, heat, thermal risk, and suitability	Selection or creation of a conducive condition; avoidance or correction of depletion
Principal evidence	Sensory report agrees sufficiently with measured condition and bodily response	Stable bodily function, recovery, safety, and absence of preventable thermal harm
False positive	Immediate pleasantness or cultural preference treated as health	Temporary comfort, over-control of environment, or energy-intensive consumption treated as nourishment

9.3 External requirements

Requirement class	Concrete affordance or protection	Strength	Reason
Epistemic	Knowledge of bodily variation, climate, thermal risk, materials, food preparation, and first aid	S or N by risk	Sensation alone may be delayed, impaired, or misread
Relational	Care for children, elders, ill persons, workers, and others unable to regulate exposure alone	N for dependent persons	Bodily vulnerability is relationally distributed
Bodily	Functional sensation, thermoregulation, hydration, nutrition, rest, and access to care	N	The field is explicitly bodily
Material	Shelter, clothing, ventilation, shade, heating or cooling where necessary, safe tools, and suitable food	N by climate and task	Conductive contact requires material means
Organisational	Occupational exposure limits, emergency response, maintenance, and access independent of wealth or status	S or N by setting	Work and public environments can impose unavoidable exposure
Protective	Prevention of forced exposure, unsafe housing or work, neglect, and concealment of risk	N	Apparent choice may be produced by dependence
Ecological	Climate-responsive design and energy use that do not create wider or future thermal harm	N at social scale	Local comfort can externalise heat, pollution, or depletion
Intergenerational	Transmission of practical knowledge about climate, clothing, food, housing, and bodily warning signs	S	Competence is learned and locally adapted

9.4 Complete functioning, evidence, and correction

Complete operation does not require maximising a preferred temperature. It requires recognising thermal information for the purpose of bodily health, selecting or creating conducive conditions, and correcting the choice through bodily and material consequences. Subjective sensation remains indispensable but not sufficient: illness, habituation, age, medication, workload, humidity, and other conditions can change either perception or risk.

Correction therefore combines the person's report, observed bodily function, empirical measurement, medical knowledge where needed, and the consequences of the material intervention. Universal structure appears here as assured capability—care, shelter, knowledge, safe work, and access to appropriate means—while the concrete temperature, building form, clothing, and technology remain variable.

9.5 Family and institutional mapping

Field	Relation	Minimum requirement implied by the pair
Family or durable close relationship	P for dependent care; E otherwise	Attention to bodily signals and provision of clothing, shelter, food, and care
Education— <i>sanskar</i>	E	Practical health, climate, material, and safety knowledge
Justice—security	E	Protection against neglect, forced exposure, and unsafe work or housing
Health—restraint	P	Bodily assessment, prevention, care, and subordination of sensation to health
Production—work	P	Creation and maintenance of safe clothing, shelter, tools, food systems, and workplaces
Exchange—reserve	E	Availability of seasonal goods, emergency provision, energy, and materials
Science and disciplined inquiry	X	Measurement, physiology, material design, and evaluation of interventions
Governance and public coordination	X	Building, workplace, public-health, and emergency standards
Culture and communication	X	Locally accumulated practices and communication of warning or need
Ecological correctness	X	Climate-responsive provision within regenerative energy and material limits
Possible sixth function	—	Housing and infrastructure are outputs of production coordinated with health, justice, and exchange

9.6 Claim ledger and counter-tests

Claim	Status	Reason and possible revision
The purpose of thermal sensation is bodily health rather than pleasure alone	D	Stated for the sensory group
Safe thermal provision is a universal function with locally variable forms	I	The need arises from the common joint form; climatic and technological implementations vary
One comfort standard can define nourishment for everyone	O, rejected as unsupported	Bodies, tasks, climates, and conditions differ

A person may endure heat or cold under understanding and purpose; this does not justify imposed exposure. A technically conditioned building may be comfortable while imposing ecological costs elsewhere. Adequate evidence therefore includes agency, bodily outcome, and wider material consequence.

Master-matrix field	Entry
ID	M-24
Pair	<i>sheet–ushna / poshan</i>
Semantic family	Sensory quality and bodily correlate
Proper field	Thermal contact and bodily-material conduciveness
Necessary or strong external affordances	Care, bodily competence, shelter, safe work, empirical knowledge, ecological design
Primary social field	Health–restraint and production–work
Characteristic obstruction	Pleasure-only criterion, imposed exposure, neglect, or externalised ecological cost
Principal evidence	Agreement among sensory report, bodily function, measurement, and wider consequence
Residual need	None
Confidence	Medium-high

10. Cross-pilot findings

10.1 The template works only when the kind of entry is recorded

The eight pilots confirm that the source list is not a catalogue of 122 psychologically uniform operations. *Anubhav* names a success of knowing; *dhruti* a readiness and dedication; *nireekshan* an act; *guna* its object or assessed content; *nyaya* a relational-evaluative activity; *guru* a person in a relationship-role; *samriddhi* a material condition; and *sheet-ushna* sensory-material qualities. Every future dossier must therefore record the **entry form and bearer** before asking what environment supports it. Otherwise the analysis will attribute agency to an object, reduce a relationship to an inner state, or mistake an evidential result for a separate faculty.

10.2 External requirements enter at different stages

The pilots distinguish at least five sites of environmental relevance:

1. **Development and receptivity:** study, relationship, inquiry, exemplars, and freedom from ignorance-producing conditions.
2. **Embodied expression:** bodily health, language, skill, tools, time, and material access.
3. **Consequence visibility:** access to the persons and natural systems bearing the result.
4. **Evaluation and correction:** mutual voice, transparent criteria, independent evidence, appeal, and revision.
5. **Continuity:** education—*sanskar*, records, reserve, maintenance, and preparation of new participants.

No pilot supports the proposition that an adequate environment is sufficient for awakening. All support the weaker and more defensible proposition that complete public functioning and continuity are impossible or unreliable when key fields of expression, evidence, and correction are systematically absent.

10.3 Family is strongly derived for some activities and indirectly relevant to others

Family is a primary field for *nyaya*, *tushti*, *svayatta-samriddhi*, dependent bodily care, and the early formation of inquiry and trust. It is an enabling rather than logically necessary field for specialised inspection, and it cannot cause *anubhav*. The derivation should therefore not state that every activity requires family in the same way. It should show that the complete set includes activities whose definitions explicitly require durable, intergenerational, and mutually accountable relationships; those requirements jointly establish a family-like functional field.

This finding supports functional invariants—durable care, generation, shared provision, relationship-recognition, mutual evaluation, and education—without yet proving one household

size, residence pattern, inheritance rule, or gendered division of work.

10.4 The five institutional functions cover the pilots without mapping one-to-one

Education—*sanskar* is primary for the development and transmission of understanding; justice—security for recognition, participation, non-coercion, and correction; health—restraint for bodily capability and the right purpose of sensation; production—work for the material evidence of prosperity and safe provision; exchange—reserve for circulation and continuity beyond one family. Each pilot nevertheless draws upon several functions.

Science, governance, culture, communication, and ecological evaluation remain indispensable. In these pilots they operate as cross-cutting methods, coordination, or correctness conditions rather than as uncovered sixth functions. The status of organised knowledge-production remains open because *nireekshan-guna* requires a durable public ecology of evidence. The full sixty-one-pair matrix must test whether treating science as cross-cutting preserves every requirement or conceals a distinct institutional continuity.

10.5 Evidence must be plural and convergent

The most recurrent institutional danger is false evidence: certainty mistaken for realisation, obedience for resolve, data for holistic inspection, silence for mutual satisfaction, affluence for prosperity, status for a teacher, dissemination for confirmation, and comfort for nourishment. No single measure can establish full activity. Evidence must combine the relevant first-person, relational, bodily, material, public, and ecological consequences while retaining the possibility of correction.

11. Method revisions before the next wave

The pilot recommends two small additions to the reusable template:

- record the **entry form and bearer**—inner success, orientation, relation, role, act, object, quality, bodily correlate, material condition, or evidential result;
- distinguish an external condition needed for the activity's **development, expression, evidence, correction, or continuity**.

The next wave should apply the revised form to the remaining *atma* and *buddhi* pair and all eight *chitta* pairs before proceeding through *vritti* and *mun*. The possible sixth-function flag should remain open until every pair has been classified.
